

TMP23x-Q1 Automotive Grade, High-Accuracy Analog Output Temperature Sensors

1 Features

- AEC-Q100 qualified for automotive applications
 - TMP235-Q1 grade 0: -40°C to $+150^{\circ}\text{C}$
 - TMP236-Q1 grade 1: -40°C to $+125^{\circ}\text{C}$
- Tight accuracy across a wide temperature range:
 - $\pm 2.5^{\circ}\text{C}$ (maximum): -40°C to $+150^{\circ}\text{C}$ (TMP235-Q1)
 - $\pm 2.5^{\circ}\text{C}$ (maximum): -10°C to $+125^{\circ}\text{C}$ (TMP236-Q1)
- Positive slope sensor gain, offset (typical):
 - 10 mV/ $^{\circ}\text{C}$, 500 mV at 0°C (TMP235-Q1)
 - 19.5 mV/ $^{\circ}\text{C}$, 400 mV at 0°C (TMP236-Q1)
- Wide operating supply voltage range:
 - 2.3 V to 5.5 V (TMP235-Q1)
 - 3.1 V to 5.5 V (TMP236-Q1)
- Short-circuit protected output
- Low power: 9 μA (typical)
- Strong output for driving loads up to 1000 pF
- Available package options:
 - 5-pin SC70 (DCK) surface mount
 - 3-pin SOT-23 (DBZ) surface mount
 - Footprint compatible with industry-standard LMT8x-Q1 and LM20 temperature sensors
- Cost-effective alternative to thermistors

2 Applications

- Automotive head unit
- Electric power steering (EPS)
- Shifter system
- Battery management system (BMS)
- Gasoline engine

Functional Block Diagram

3 Description

The TMP23x-Q1 devices are a family of automotive grade precision CMOS integrated-circuit linear analog temperature sensors with an output voltage proportional to temperature, serving various automotive applications from powertrain to infotainment. These temperature sensors have a typical accuracy from 0°C to $+70^{\circ}\text{C}$ of $\pm 0.5^{\circ}\text{C}$. The TMP235-Q1 device provides a positive slope output of 10 mV/ $^{\circ}\text{C}$ over the full -40°C to $+150^{\circ}\text{C}$ temperature range and a supply range from 2.3 V to 5.5 V. The higher gain TMP236-Q1 sensor provides a positive slope output of 19.5 mV/ $^{\circ}\text{C}$ from -10°C to $+125^{\circ}\text{C}$ and a supply range from 3.1 V to 5.5 V.

The 9- μA typical quiescent current and 800- μs typical power-on time enable effective power-cycling architectures to minimize power consumption for battery-powered devices. A class-AB output driver provides a strong 500- μA maximum output to drive capacitive loads up to 1000 pF and is designed to directly interface to analog-to-digital converter sample and hold inputs. With excellent accuracy and a strong linear output driver, the TMP23x-Q1 analog output temperature sensors are cost-effective alternatives to passive thermistors.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TMP235-Q1, TMP236-Q1	SC70 (5)	2.00 mm x 1.25 mm
	SOT-23 (3)	2.92 mm x 1.30 mm

• Changed recommended operating temperature range from: –50°C to 150°C to: –40°C to 150°C	4

5 Pin Configuration and Functions

Pin Functions

NAME	PIN		TYPE	DESCRIPTION
	SOT-23	SC70		
GND	3	2	Ground	Power supply ground.
NC	—	5	—	No internal connection. This pin may be left floating or connected to GND.
NC	—	1	—	No internal connection. This pin may be left floating or connected to GND.
V _{OUT}	2	3	O	Outputs voltage proportional to temperature
V _{DD}	1	4	I	Positive supply input

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

	MIN	MAX	UNIT
Supply voltage, V_{DD}		+6	V
Output voltage, V_{OUT}	-0.3	($V_{DD} + 0.3$)	
Output current	-30	+30	mA
Latch-up current, each pin	-200	+200	
Junction temperature (T_J)		+150	°C
Storage temperature (T_{stg})	-65	+150	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per AEC Q100-002 ⁽¹⁾	±2000	V
$V_{(ESD)}$	Electrostatic discharge	Charged device model (CDM), per AEC Q100-011: All Pins	±500	V
$V_{(ESD)}$	Electrostatic discharge	Charged device model (CDM), per AEC Q100-011: Corner Pins	±750	V

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{DD}	Input voltage (TMP235-Q1)	2.3		5.5	V
	Input voltage (TMP236-Q1)	3.1		5.5	
T_A	Operating free-air temperature	-40		150	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾⁽²⁾		TMP23X-Q1		UNIT
		DCK (SC70)	DBZ (SOT-23)	
		PINS	PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance ⁽³⁾⁽⁴⁾	275	167	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	84	90	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	56	146	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	1.2	35	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	55	146	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.
- (2) For information on self-heating and thermal response time see [Layout Guidelines](#) section.
- (3) The junction to ambient thermal resistance ($R_{\theta JA}$) under natural convection is obtained in a simulation on a JEDEC-standard, High-K board as specified in JESD51-7, in an environment described in JESD51-2. Exposed pad packages assume that thermal vias are included in the PCB, per JESD 51-5.
- (4) Changes in output due to self heating can be computed by multiplying the internal dissipation by the thermal resistance.

6.5 Electrical Characteristics

TMP235-Q1: $V_{DD} = 2.3\text{ V to }5.5\text{ V}$, GND = Ground, $T_A = -40^\circ\text{C to }+125^\circ\text{C}$ and no load (unless otherwise noted)

TMP236-Q1: $V_{DD} = 3.1\text{ V to }5.5\text{ V}$, GND = Ground, $T_A = -10^\circ\text{C to }+125^\circ\text{C}$ and no load (unless otherwise noted)

ADVANCE INFORMATION

7 Detailed Description

7.1 Overview

The TMP23x-Q1 devices are a family of linear analog temperature sensors with an output voltage proportional to temperature. These temperature sensors have an accuracy from 0°C to 70°C of ±1.5°C. The TMP235-Q1 device provides a positive slope output of 10 mV/°C over the full –40°C to +150°C temperature range and a supply range from 2.3 V to 5.5 V. The higher gain TMP236-Q1 sensor provides a positive slope output of 19.5 mV/°C from –10°C to +125°C and a supply range from 3.1 V to 5.5 V. A class-AB output driver provides a maximum output of 500 µA to drive capacitive loads up to 1000 pF.

7.2 Functional Block Diagram

7.3 Feature Description

As shown in Figure 2, the TMP23x-Q1 devices are linear. A small V_{OUT} gain shift, however, is present at temperatures above 100°C. When small shifts are expected, a piecewise linear function provides the best accuracy and is used for the device accuracy specifications (see [Specifications](#)). Typical output voltages of the TMP23x-Q1 devices across the full operating temperature range are listed in [Table 3](#) and [Table 4](#). The ideal linear columns represent the ideal linear V_{OUT} output response with respect to temperature, while the piecewise linear columns indicate the small voltage shift at elevated temperatures.

The piecewise linear function uses three temperature ranges listed in [Table 1](#) and [Table 2](#). In equation form, the voltage output V_{OUT} of the TMP23x-Q1 is calculated by [Equation 1](#):

$$V_{OUT} = (T_A - T_{INFL}) \times T_C + V_{OFFS}$$

where

- V_{OUT} is the TMP23x-Q1 voltage output for a given temperature
 - T_A is the ambient temperature in °C
 - T_{INFL} is the temperature inflection point for a piecewise segment in °C
 - T_C is the TMP23x-Q1 temperature coefficient or gain
 - V_{OFFS} is the TMP23x-Q1 voltage offset
- (1)

Therefore, the T_A temperature for a given V_{OUT} voltage output within a piecewise voltage range (V_{RANGE}) is calculated in [Equation 2](#). For applications where the accuracy enhancement above 100°C is not required, use the first row of [Table 1](#) and [Table 2](#) for all voltages.

$$T_A = (V_{OUT} - V_{OFFS}) / T_C + T_{INFL}$$
(2)

Table 1. TMP235-Q1 Piecewise Linear Function Summary

ADVANCE INFORMATION

7.4 Device Functional Modes

The singular functional mode of the TMP23x-Q1 is an analog output directly proportional to temperature.

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The features of the TMP235-Q1 make the series of devices designed for various general temperature-sensing applications. The TMP235-Q1 and TMP236-Q1 devices can operate down to a 2.3-V and a 3.1-V supply with 9- μ A power consumption, respectively. The TMP23x-Q1 series is mounted in two surface mount technology packages (SC70 and SOT-23.)

8.2 Typical Application

8.2.1 Connection to an ADC

Figure 12. Suggested Connections to an ADC Input Stage

8.2.1.1 Design Requirements

See Figure 12 for suggested connections to an ADC input stage. Most CMOS-based ADCs have a sampled data comparator input structure. When the ADC charges the sampling capacitor (C_{SAMPLE}), the capacitor requires instantaneous charge from the output of the analog source temperature sensor, such as the TMP23x-Q1. Therefore, the output impedance of the temperature sensor can affect ADC performance. In most cases, adding an external capacitor (C_{FILTER}) mitigates design challenges. The TMP23x-Q1 is specified and characterized with a 1000-pF maximum capacitive load (C_{LOAD}). Figure 12 shows C_{LOAD} as the sum of $C_{FILTER} + C_{MUX} + C_{SAMPLE}$. TI recommends maximizing the C_{FILTER} value while allowing for the maximum specified ADC input capacitance ($C_{MUX} + C_{SAMPLE}$) to limit the total C_{LOAD} at 1000 pF. In most cases, a 680-pF C_{FILTER} provides a reasonable allowance for ADC input capacitance to minimize ADC sampling error and reduce noise coupling. An optional series resistor (R_{FILTER}) and C_{FILTER} provides additional low-pass filtering to reject system level noise. TI recommends placing R_{FILTER} and C_{FILTER} as close as possible to the ADC input for optimal performance.

8.2.1.2 Detailed Design Procedure

Depending on the input characteristics of the ADC, an external C_{FILTER} may be required. The value of C_{FILTER} depends on the size of the sampling capacitor (C_{SAMPLE}) and the sampling frequency while observing a maximum C_{LOAD} of 1000 pF. The capacitor requirements can vary because the input stages of all ADCs are not identical. Figure 12 shows a general ADC application as an example only.

Typical Application (continued)

8.2.1.3 Application Curve

Figure 13. Output Voltage vs. Ambient

9 Power Supply Recommendations

The low supply current and supply range of the TMP23x-Q1 allow the device to be easily powered from many sources.

Power supply bypassing is strongly recommended. In noisy environments, TI recommends to add a filter with 0.1- μ F capacitor and 100- Ω resistor between external supply and V_{DD} to limit the power supply noise. Larger capacitances may be required and are dependent on the noise of the power supply.

10 Layout

10.1 Layout Guidelines

The layout of the TMP23x-Q1 series is simple. If a power supply bypass capacitor is used, the capacitor must be connected as [Layout Examples](#) shows.

11.4 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer:The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

OTHER QUALIFIED VERSIONS OF TMP235-Q1, TMP236-Q1 :

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product

DCK (R-PDSO-G5)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
 - D. Falls within JEDEC MO-203 variation AA.

DCK (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
 - Publication IPC-7351 is recommended for alternate designs.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.
