

## 1.8V，可编程电阻器 温度开关和SC70内的 模拟输出温度传感器

 查询样品: **TMP300B-Q1**

### 特性

- 准确度:  $\pm 1^{\circ}\text{C}$  (+25°C时的典型值)
- 可编程跳变点
- 可编程滞后:  $5^{\circ}\text{C}/10^{\circ}\text{C}$
- 开漏电路输出
- 低功率:  $110\mu\text{A}$  (最大值)
- 宽电压范围: **+1.8V 至 +18V**
- 运行温度:  $-40^{\circ}\text{C}$  至  $+150^{\circ}\text{C}$
- 模拟输出:  $10\text{mV}/^{\circ}\text{C}$
- **SC70-6** 封装

### 应用范围

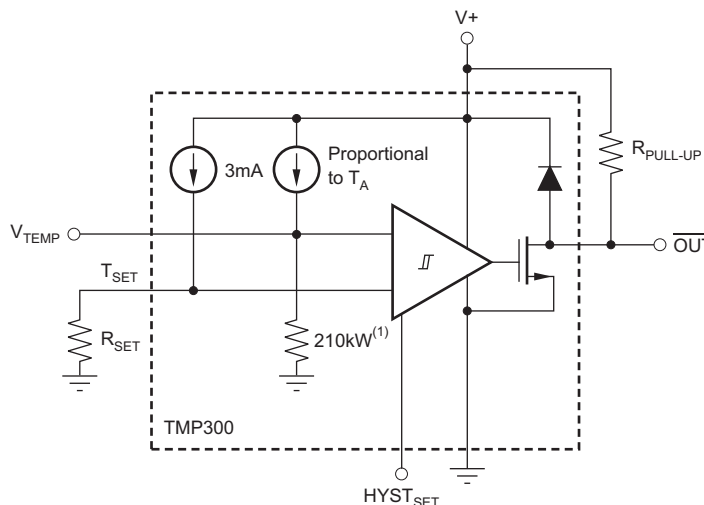

- 符合汽车应用要求
- 电源系统
- **DC-DC**模块
- 过热监控
- 电子保护系统

### 说明

TMP300B-Q1是一款低功率，电阻器可编程，数字输出温度开关。通过添加一个外部电阻器它可设定一个阈值点。提供2级滞后。TMP300B-Q1有一个 $V_{\text{TEMP}}$ 模拟输出，此输出能被用做一个测试点或者被用于温度补偿环路。

因其电源电压低至1.8V并且流耗较低，TMP300B-Q1非常适合对于电源要求较高的应用。

采用具有经证实的热特性的2个微封装，为需要简单和可靠温度管理的用户提供完整的和简单的解决方案。

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### APPLICATIONS INFORMATION

The TMP300B-Q1 is a thermal sensor designed for over-temperature protection circuits in electronic systems. The TMP300B-Q1 uses a set resistor to program the trip temperature of the digital output. An additional high-impedance (210kΩ) analog voltage output provides the temperature reading.

#### CALCULATING R<sub>SET</sub>

The set resistor (R<sub>SET</sub>) provides a threshold voltage for the comparator input. The TMP300B-Q1 trips when the V<sub>TEMP</sub> pin exceeds the T<sub>SET</sub> voltage. The value of the set resistor is determined by the analog output function and the 3μA internal bias current.

To set the TMP300B-Q1 to trip at a preset value, calculate the R<sub>SET</sub> resistor value according to Equation 1 or Equation 2:

$$R_{SET} = \frac{(T_{SET} \times 0.01 + 0.5)}{3e^{-6}} \tag{1}$$

Where T<sub>SET</sub> is in °C; or

$$R_{SET} \text{ in } k\Omega = \frac{10(50 + T_{SET})}{3} \tag{2}$$

Where T<sub>SET</sub> is in °C.

#### USING V<sub>TEMP</sub> TO TRIP THE DIGITAL OUTPUT

The analog voltage output can also serve as a voltage input that forces a trip of the digital output to simulate a thermal event. This simulation facilitates easy system design and test of thermal safety circuits, as shown in Figure 8.

Figure 8. Applying Voltage to Trip Digital Output

### ANALOG TEMPERATURE OUTPUT

The analog out or  $V_{TEMP}$  pin is high-impedance (210k $\Omega$ ). Avoid loading this pin to prevent degrading the analog out value or trip point. Buffer the output of this pin when using it for direct thermal measurement. Figure 9 shows buffering of the analog output signal.

Figure 9. Buffering the Analog Output Signal

### USING A DAC TO SET THE TRIP POINT

The trip point is easily converted by changing the digital-to-analog converter (DAC) code. This technique can be useful for control loops where a large thermal mass is being brought up to the set temperature and the  $\overline{OUT}$  pin is used to control the heating element. The analog output can be monitored in a control algorithm that adjusts the set temperature to prevent overshoot. Trip set voltage error versus temperature is shown in Figure 10, which shows error in  $^{\circ}\text{C}$  of the comparator input over temperature. An alternative method of setting the trip point by using a DAC is shown in Figure 11.

Figure 10. Trip Set Voltage Error vs Temperature

Figure 11. DAC Generates the Voltage-Driving  $T_{SET}$  Pin

### HYSTERESIS

The hysteresis pin has two settings. Grounding  $\text{HYST}_{\text{SET}}$  results in 5°C of hysteresis. Connecting it to  $V_S$  results in 10°C of hysteresis. Hysteresis error variation over temperature is shown in Figure 12 and Figure 13.

Bypass capacitors should be used on the supplies as well as on the  $R_{\text{SET}}$  and analog out ( $V_{\text{TEMP}}$ ) pins when in noisy environments, as shown in Figure 14. These capacitors reduce premature triggering of the comparator.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.
