

TS3DS10224 高速差动交叉点、1:4 差分多路复用器和多路信号分离器、双通道差分 1:2 多路复用器和多路信号分离器或扇出开关

1 特性

- 可用于配置
 - 差动交叉点开关
 - 差分单通道 1:4 多路复用器和多路信号分离器
 - 差分双通道 1:2 多路复用器和多路信号分离器
 - 信号对至两个端口的同步差动扇出
- 双向运转
- 失效防护保护: I_{OFF} 保护可防止在掉电状态 ($V_{CC} = 0V$) 下泄漏电流
- 高带宽 (典型值 1.2GHz)
- 低 R_{ON} 和 C_{ON} :
 - 典型值 13Ω R_{ON}
 - 典型值 $9pF$ C_{ON}
- 静电放电性能 (I/O 引脚)
 - $\pm 8kV$ 接触放电 (IEC 61000-4-2)
 - JESD22-A114E (至 GND) 对应的 2 kV 人体模型
- ESD 性能 (所有引脚)
 - JESD22 A114E 对应的 2 kV 人体模型
- 小型 WQFN 封装 ($3.00\text{ mm} \times 3.00\text{ mm}$, 0.4 mm 间距)

2 应用

- 差动交叉点开关
- 台式机和笔记本电脑
- Displayport 辅助通道复用
- USB 2.0 复用
- 上网笔记本、电子书和平板电脑

3 说明

TS3DS10224 器件是一款双向差动交叉点、1:4 或 1:2 多路复用器和多路信号分离器; 或高达 720Mbps 的高速差分信号应用扇出开关。TS3DS10224 逻辑表可对任何输入到输出进行布线, 创建各种可能的开关或多路复用配置。常见配置包括: 差动交叉点开关、差分 1:4 多路复用器, 或差分双通道 1:2 多路复用器和多路信号分离器。TS3DS10224 提供 1.2GHz 高带宽, 具有 13Ω 的通道 R_{ON} (典型值)。

TS3DS10224 也可用于将差分信号对同步扇出至两个端口 (扇出配置)。在这个配置中, 带宽性能有所降低。

TS3DS10224 需由 3V 至 3.6V 的电源供电。该器件的 I/O 引脚上具有最高可达 $\pm 8kV$ 的接触放电 ESD 保护和 2kV 人体模型。

在电源 (V_{CC}) 不存在时, TS3DS10224 使用高阻抗隔离 I/O 引脚以提供失效防护保护。

6 Specifications

6.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted).⁽¹⁾

	MIN	MAX	UNIT
Supply voltage	−0.3	4	V
Analog I/O voltage ⁽²⁾⁽³⁾⁽⁴⁾	−0.3	$V_{CC} + 0.3$	V
Control input voltage ⁽²⁾⁽⁴⁾ , V_{IN}	−0.3	$V_{CC} + 0.3$	V
ON-state switch current ⁽⁵⁾ , I_{IO}		±100	mA
Continuous current through VCC or GND		±100	mA
Storage temperature, T_{stg}	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground, unless otherwise specified.
- (3) V_I and V_O are used to denote specific conditions for V_{IO} .
- (4) The input and output voltage rating may be exceeded if the input and output clamp-current ratings are observed.
- (5) I_I and I_O are used to denote specific conditions for I_{IO} .

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$ Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2500	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 or ANSI/ESDA/JEDEC JS-002 ⁽²⁾	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

Over operating free-air temperature range (unless otherwise noted).⁽¹⁾⁽²⁾

	MIN	MAX	UNIT
V_{CC} Supply voltage	3	3.6	V
V_{IH} High-level control input voltage	$0.75 \times V_{CC}$	V_{CC}	V
V_{IL} Low-level control input voltage	0	0.6	V
V_{IO} Input and output voltage	0	V_{CC}	V
T_A Operating free-air temperature	−40	85	°C

- (1) All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation. See *Implications of Slow or Floating CMOS Inputs* (SCBA004).
- (2) TI recommends pulling down to ground unused I/O pins through a 1-k Ω resistor.

6.4 Thermal Information

8 Detailed Description

8.1 Overview

The TS3DS10224 is a 3-V, bidirectional, differential crosspoint, differential 1:4, 2-channel differential 1:2 multiplexer and demultiplexer, or fan-out switch for high-speed differential signal applications. The TS3DS10224 can route any input to any output creating a wide range of possible switching or multiplexing configurations. Differential crosspoint switching, differential 1:4 mux, or 2-channel differential 1:2 multiplexer and demultiplexer are commonly used configurations of the device. Additionally the TS3DS10224 can also be used to fan out a differential signal pair to two ports simultaneously (fan-out configuration). However, the BW performance is lower in this configuration.

8.3 Feature Description

8.3.1 Fail-Safe Protection

I_{OFF} protection prevents current leakage in powered down state ($V_{CC} = 0$ V).

The TS3DS10224 device places the signal paths in a high-impedance state when the device is not powered. This isolates the data bus if the IC loses power on the supply pin.

8.4 Device Functional Modes

8.4.1 Enable and Disable

The TS3DS10224 has two enable pins (ENA and ENB). Setting these pins LOW disables the signal path and place them in a high-impedance (Hi-Z) state.

Table 1. Enable and Disable Function Table

ENA	ENB	INA	INB	OUTA0	OUTA1	OUTB0	OUTB1
0	0	Hi-Z	Hi-Z	Hi-Z	Hi-Z	Hi-Z	Hi-Z
0	1	Hi-Z	Enabled	Hi-Z	Hi-Z	Enabled	Enabled
1	0	Enabled	Hi-Z	Enabled	Enabled	Hi-Z	Hi-Z
1	1	Enabled	Enabled	Enabled	Enabled	Enabled	Enabled

8.4.2 Differential Crosspoint Switch

The TS3DS10224 can be configured as a differential crosspoint switch. Crosspoint switches are particularly helpful when traces have to cross in simplifying layouts, and when switching the top and bottom signals of the reversible connector in USB Type-C applications.

[Table 2](#) shows that the inputs INA and INB can be routed to OUTA or OUTB. This is accomplished by setting the Select A Output (SAO) and Select B Output (SBO) LOW and selecting which input goes to the output by toggling the Select A Input (SAI) and Select B Input (SBI) pins.

8.4.3 2-Channel 1:2 Mux

The TS3DS10224 can be configured to be differential 2-channel 1:2 mux.

Table 3 shows that the inputs INA and INB can be routed to 2 different places. This is accomplished by setting the Select A Input (SAI) and Select B Input (SBI) HIGH and selecting an output by toggling the Select A Output (SAO) and Select B Output (SBO) pins.

8.4.4 1-Channel 1:4 Mux

The TS3DS10224 can be configured as differential 1-channel 1:4 mux.

The truth table below shows that the inputs INA can be routed to 4 different places. This is accomplished by setting the Select A Input (SAI) and Select B Input (SBI) HIGH and selecting an output by toggling the Select A Output (SAO) and Select B Output (SBO) pins.

Unused pins INB+ and INB– must be left floating in this configuration.

8.4.5 Fan-Out 1:2 Configuration

The TS3DS10224 can be configured in a differential fan-out 1:2 mux.

The truth table below shows that the inputs INA or INB can be routed to output A or output B simultaneously. This is accomplished by setting the Select A Input (SAI) and Select B Input (SBI) HIGH and selecting an output by toggling the Select A Output (SAO) and Select B Output (SBO) pins.

Unused pins INB+ and INB– must be left floating in this configuration.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TS3DS10224 device can be configured for a variety of applications which makes this a great utility device. The most unique feature of this device is the ability to operate as a differential crosspoint switch.

9.2 Typical Applications

Figure 18. 1-Channel Differential 1:4 Mux Application

9.2.1.1 Design Requirements

TI recommends that the digital control pins SAI, SBI, SAO, and SBO be pulled up to V_{CC} or down to GND to avoid undesired switch positions that could result from a floating pin. Unused pins for the signal paths INA, INB, OUTAx, and OUTBx must be terminated with a 50-Ω resistor to ground to reduce signal reflections in high-speed applications.

The thermal pad may be left floating or connected to ground.

9.2.1.2 Detailed Design Procedure

The TS3DS10224 can be properly operated without any external components. TI recommends placing a bypass capacitor on the VCC pin.

TI recommends that the digital control pins SAI, SBI, SAO, and SBO be pulled up to V_{CC} or down to GND to avoid undesired switch positions that could result from the floating pin. Unused pins for the signal paths INA, INB, OUTAx, OUTBx must be terminated with a 50-Ω resistor to ground to reduce signal reflections in high-speed applications.

The bandwidth performance is lower in this application (500 MHz).

10 Power Supply Recommendations

Power to the device is supplied through the VCC pin and must be within the recommended operating voltage range. TI recommends a bypass capacitor be placed as close to the supply pin (VCC) as possible to help smooth out lower frequency noise and to provide better load regulation across the frequency spectrum.

11 Layout

11.1 Layout Guidelines

- The thermal pad may be left floating or connected to the ground plane
- Place supply-bypass capacitors as close to the VCC pin as possible and avoid placing the bypass capacitors near the positive and negative traces.
- The high-speed positive and negative traces must always be matched and the lengths must not exceed 4 inches; otherwise, the eye diagram performance may be degraded. In layout, the impedance of positive and negative traces must match the cable characteristic differential impedance for optimal performance.
- Route the high-speed signals using a minimum of vias and corners to reduce signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the signal's transmission line and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.
- When it becomes necessary to turn 90°, use two 45° turns or an arc instead of making a single 90° turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.
- Do not route signal traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices, or ICs that use or duplicate clock signals.
- Avoid stubs on the high-speed signal traces because they cause signal reflections.
- Route all high-speed signal traces over continuous GND planes, with no interruptions.
- Avoid crossing over anti-etch, commonly found with plane splits.
- Due to high-frequency signal traces, TI recommends a printed-circuit board with at least four layers; two signal layers separated by a ground and power layer as shown in [Figure 24](#).

Figure 24. Four-Layer Board Stack-Up

The majority of signal traces must run on a single layer, preferably Signal 1. Immediately next to this layer must be the GND plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies.

12.5 静电放电警告

ESD 可能会损坏该集成电路。德州仪器 (TI) 建议通过适当的预防措施处理所有集成电路。如果不遵守正确的处理措施和安装程序，可能会损坏集成电路。

ESD 的损坏小至导致微小的性能降级，大至整个器件故障。精密的集成电路可能更容易受到损坏，这是因为非常细微的参数更改都可能会导致器件与其发布的规格不相符。

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
