

# Microcontrollers in Optical Networking

Optical networking is the control of fiber optic communication infrastructure. Silicon is present in every situation where the optical network delivers data to the processing stations, such as data centers, buildings serviced by fiber optic networks, cell phone towers, and more.

This includes everything from high bandwidth cables between countries and cities and data centers (SONET/CWDM) all the way down to Ethernet switches (EPON/Fiber channel) and fiber service to the home (FTTH/GPON). New areas also include wireless infrastructure where fiber transmission from antenna to base station has replaced copper in cell phone towers.

Low-cost microcontrollers are needed in Optical Switch Module applications that are in nearly every type of optical network. They

are typically in Small Form-factor Pluggable (SFP, SFP+) modules where they control the transimpedance amplifiers, laser drivers, and record the digital diagnostic information.

## Why partner with TI in optical networking?

- Unified FRAM simplifies software architecture for faster time to market by covering all memory needs in one space!
- Free I<sup>2</sup>C boot-strap loader in ROM for fast and easy programming
- Industry's broadest portfolio of die-sized packaging reduces size of the system
- 400+ code-compatible devices with 1000+ code examples, libraries, Grace™ software and ULP Advisor make MSP430™ MCUs the easiest to program

## Microcontrollers for optical networking

**Applications kit:**  
MSP-EXP430FR5739 – \$29  
[www.ti.com/fram](http://www.ti.com/fram)

Code Composer Studio™ Integrated Development Environment is TI's software development environment that supports the MSP MCU platform as well as other TI embedded processors. It's free when being used with TI devices.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.

### Products

Audio	<a href="http://www.ti.com/audio">www.ti.com/audio</a>
Amplifiers	<a href="http://amplifier.ti.com">amplifier.ti.com</a>
Data Converters	<a href="http://dataconverter.ti.com">dataconverter.ti.com</a>
