

# Airvana

Airvana's high-performance technology and products-from comprehensive femtocell and convergence solutions to macro radio access infrastructure-enable operators to deliver compelling and consistent broadband services to mobile subscribers, wherever they are. Airvana's products are deployed in 70 commercial networks on all six continents.

 HubBub

Airvana's breakthrough HubBub CDMA femtocell will allow subscribers to use their existing CDMA handsets - in-building - with significantly improved coverage and increased broadband wireless performance.

**“Selecting a market-leading processing platform is core to Airvana’s femtocell strategy. The adoption of TI’s DSP family ensures that we will be on an aggressive cost and performance curve, while the mature development tools enable us to respond rapidly to emerging market requirements.”**

Daniel Crews, Director  
CDMA Femtocell Product Line Management
