

TUSB6250 Power Supply Sequencing

Connectivity Solutions

This application report describes the correct power supply sequencing for devices utilizing two voltages: a 1.8-V core supply and a 3.3-V I/O supply that also contain an internal voltage regulator that is disabled so that both voltages are being supplied externally. This application note also pertains to situations when the internal voltage regulators are enabled and the ramp of the 3.3-V I/O supply is slow.

1.1 Requirement for Power Supply Sequencing

Power supply sequencing is required for devices with disabled internal voltage regulators where a 1.8-V core supply and a 3.3-V I/O supply are provided externally. For the TUSB6250, this is the condition when VREGEN/ and DVREGEN/ are tied high and 1.8 V is being applied to PLLVDD18, UDVDD18, and DVDD18 and 3.3 V is applied to DVDD. The power supply sequencing is required due to the presence of a diode within the disabled voltage regulator. If the 1.8-V supply is applied before the 3.3-V supply is applied, the diode becomes reverse-biased and can lead to device failure.

When the internal voltage regulators are enabled but the ramp of the 3.3-V supply is too slow a situation can exist where the internal voltage regulators begin to function and source 1.8 V before 3.3 V reaches 2.5 V. This causes the voltage regulator diode to become reverse biased and results in unstable operation of the device.

1.2 Power- Up Sequence

The 1.8-V power supply should begin to ramp up after the 3.3-V power supply reaches at least 2.5 V.

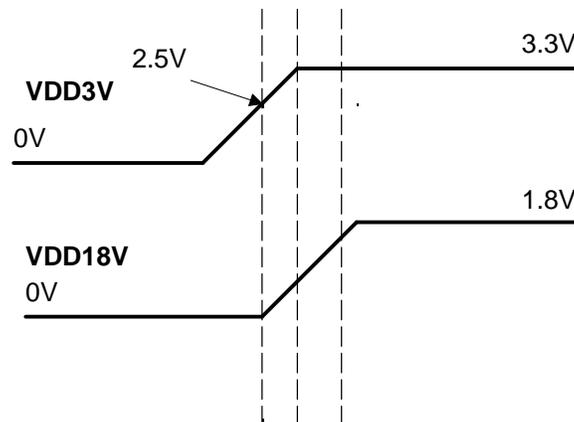

Figure 1-1. Power- Up Sequence

1.3 Power-Down Sequence

The 1.8V power supply should ramp down before the 3.3V power supply. The exact timing will be dependant upon the capacitance of the design.

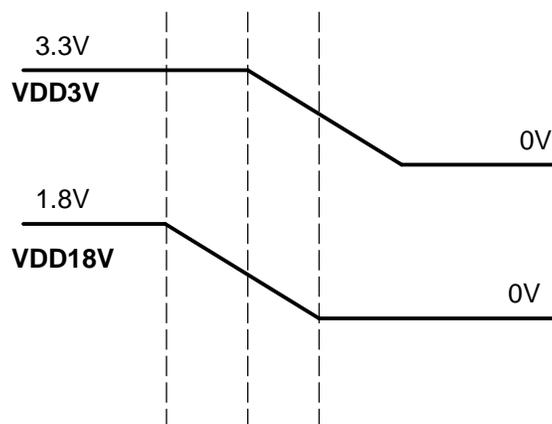

Figure 1-2. Power-Down Sequence

CAUTION

At no time should the 1.8-V power supply have a higher voltage than the 3.3-V power supply.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.
