

MOSFET Power Loss Calculator

The *MOSFET Power Loss Calculator* allows users to quickly choose *Power Block* or discrete MOSFET devices for a synchronous buck topology based on desired application parameters. The tool takes user-inputted values and a user-chosen controller to calculate estimated power losses of *Power Blocks* and discrete MOSFETs, provides all possible device options sorted by power loss in ascending order, and includes relative 1k prices and relevant parameters. Located on www.ti.com, the tool accompanies the MOSFET selection tool on each *Power Block* and discrete device webpage.

MOSFET Power Loss Calculator Tool

NOTE: The *Plots* function of the *MOSFET Power Loss Calculator* is only available on web browsers Google Chrome™ browser, Firefox®, and Internet Explorer® version 8 or higher.

User Instructions

Step 1. Access the *MOSFET Power Loss Calculator* via specific *Power MOSFET* devices on www.ti.com.

Once accessed, the *MOSFET Power Loss Calculator* opens as a separate page with default inputs for each parameter.

MOSFET Power Loss Calculator

The controller selection box lies in the center of the circuit. The drop-down arrow releases a list of controllers available. Click the down arrow and select the desired controller or the last option, *Custom*.

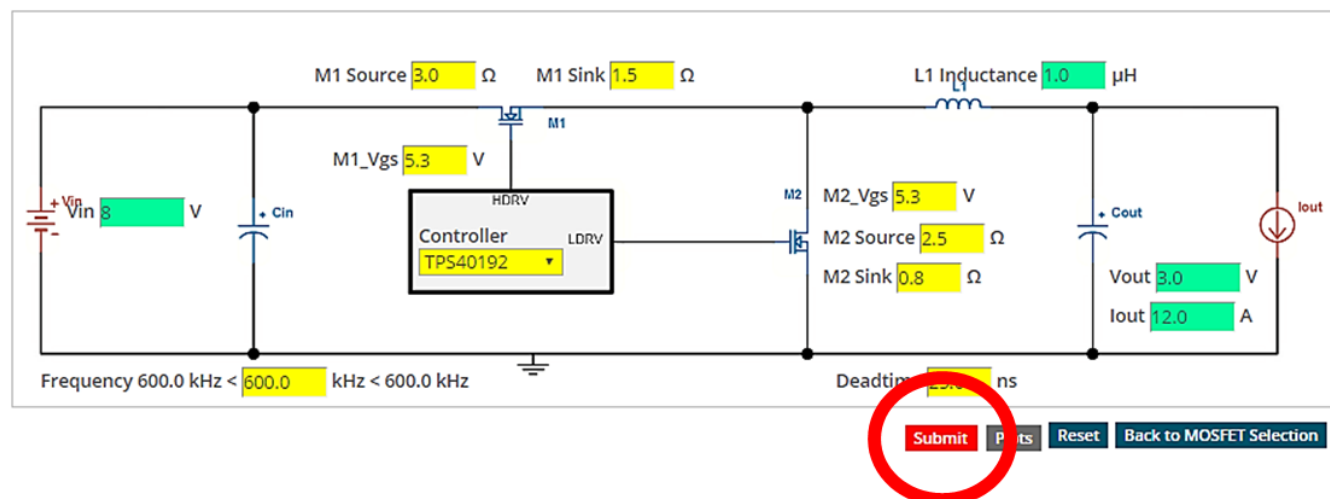

Values associated with the controller populate the yellow boxes after submission. Note the changes in all of the input boxes.

Step 2. Adjust conditions and click **Submit**.

Conditions in the green input boxes and the yellow frequency input box can be altered within the range of the controller. Once the parameters are changed to desired values, click the red **Submit** button.

NOTE: A warning box will caution adjustments to conditions outside the controller range, and the controller type in the center box automatically changes to *Custom*.

NOTE: If yellow input boxes (aside from the frequency box) are changed and submitted, the controller type automatically changes to *Custom*.

4. Choose a **Power Block** or discrete pair and click **Submit** to obtain the total power loss.

After condition submission, the *MOSFET Power Loss Calculator* provides suggestions for *Power Block* or discrete pair (M1 Highside and M2 Lowside pair) devices based on user input. The tool generates a list in power loss ascending order (best to worst performance).

Power Block selection includes both high-side and low-side FETs. Discrete selection requires a high-side FET selection and a low-side FET selection. To select a particular device, go to the *Select* column and click the circle next to the desired device. Then, click the red *Submit* button above the *Power Block* list.

After submission, refer to the upper left of the window for power loss information.

Operating Values

Duty Cycle	44.118 %
Inductor Ripple	3.125 A
I _{out}	12.0 A
Power Block:	N
Selected M1	CSD16322Q5C
M1 Power Dissipation	0.8177 W
Selected M2	CSD17575Q3
M2 Power Dissipation	0.95079 W
Total Power Dissipation	1.7685 W

5. Click **Plots** to generate power loss curves.

Clicking the **Plots** button, which is located next to the **Submit** button, generates Power Loss vs. Output Current curves.

Step 3. Click **Reset** to return to the default settings.

Clicking the **Reset** button returns the circuit to contain its original, default controller and parameter values.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
