THS402x 2GHz, 10V/V Stable, Low-Noise, High-Speed Amplifiers

1 Features

- Ultra-low 1.2nV/√Hz voltage noise
- High speed:
  - 2GHz gain-bandwidth product
  - 470V/µs slew rate
  - 30ns settling time (0.1%)
- Stable at gains ≥10V/V
- Output drive, I_O = 200mA (typical)
- Very low distortion:
  - THD = –68dBc (f = 1MHz, R_L = 150Ω)
- Wide range of power supplies:
  - V_{CC} = ±4.5V to ±16V
- Offset nulling pins on the THS4021

2 Applications

- Ultrasound scanner
- Source measurement unit (SMU)
- Power quality meter

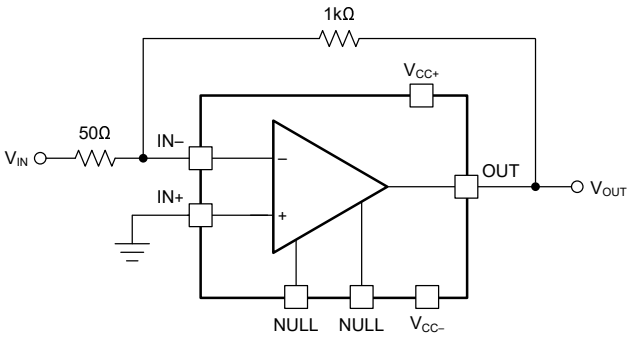
3 Description

The THS4021 and THS4022 (THS402x) are ultra-low voltage noise, high-speed voltage-feedback amplifiers that are an excellent choice for applications requiring low voltage noise, including communication and imaging. The single-amplifier THS4021 and the dual-amplifier THS4022 offer very good ac performance with a 290MHz closed-loop bandwidth, 470V/µs slew rate, and 30ns settling time (0.1%) for a gain of 10V/V. The THS402x are stable at gains of 10V/V or greater and –9V/V or less. These amplifiers have a high drive capability of 200mA and draw only 7.5mA of supply current per amplifier. With a total harmonic distortion (THD) of –68dBc at f = 1MHz, the THS402x are designed for applications requiring low distortion.

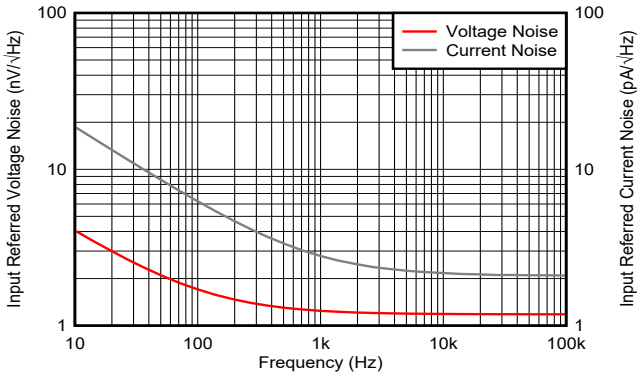
Device Information

PART NUMBER	AMPLIFIERS	PACKAGE(1)
THS4021	One	D (SOIC, 8)
		DGN (HVSSOP, 8)
THS4022	Two	DGN (HVSSOP, 8)

(1) For more information, see Section 10.



Simplified Application



Voltage and Current Noise vs Frequency

Table of Contents

4 Pin Configuration and Functions

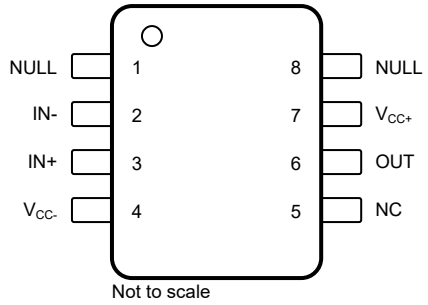


Figure 4-1. THS4021: D Package, 8-Pin SOIC, or DGN Package, 8-pin HVSSOP (Top View)

Table 4-1. Pin Functions: THS4021

PIN		TYPE	DESCRIPTION
NAME	NO.		
IN–	2	Input	Inverting input
IN+	3	Input	Noninverting input
NC	5	—	No connection
NULL	1, 8	Input	Voltage offset adjust
OUT	6	Output	Output of amplifier
$V_{CC–}$	4	—	Negative power supply
V_{CC+}	7	—	Positive power supply

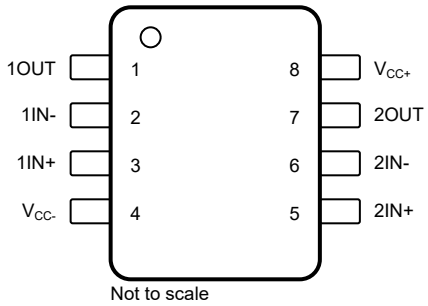

Figure 4-2. THS4022: DGN Package, 8-pin HVSSOP (Top View)

Table 4-2. Pin Functions: THS4022

PIN		TYPE	DESCRIPTION
NAME	NO.		
1IN–	2	Input	Channel 1 inverting input
1IN+	3	Input	Channel 1 noninverting input
1OUT	1	Output	Channel 1 output
2IN–	6	Input	Channel 2 inverting input
2IN+	5	Input	Channel 2 noninverting input
2OUT	7	Output	Channel 2 output
$V_{CC–}$	4	—	Negative power supply
V_{CC+}	8	—	Positive power supply

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

			MIN	MAX	UNIT
$V_{CC–}$ to V_{CC+}	Supply voltage			33	V
V_I	Input voltage			$\pm V_{CC}$	V
I_O	Output current(2)			240	mA
V_{IO}	Differential input voltage			±1.5	V
I_{IN}	Continuous input current			10	mA
T_J	Maximum junction temperature	Maximum junction temperature		150	°C
T_A	Operating free-air temperature	C-suffix	0	70	°C
		I-suffix	–40	85	
T_{stg}	Storage temperature		–65	150	°C
	Lead temperature 1.6 mm (1/16 inch) from case for 10 seconds			300	°C

(1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. *Absolute Maximum Ratings* do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.
(2) When continuously operating at any output current, do not exceed the maximum junction temperature. Keep the output current less than the absolute maximum rating regardless of time interval.

5.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins(1)	±1000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101(2)	±1000	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage	Dual-supply	±4.5	±15	±16	V
		Single-supply	9	30	32	
T_A	Operating free-air temperature	C-suffix	0	25	70	°C
		I-suffix	–40	25	85	

5.4 Thermal Information - THS4021

THERMAL METRIC[1]		THS4021		UNIT
		D (SOIC)	DGN (HVSSOP)	
		8 PINS	8 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	124.5	58.4	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	65.0	4.7	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	72.2	N/A	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	13.6	N/A	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	71.4	N/A	°C/W

6 Detailed Description

6.1 Overview

The THS402x are high-speed operational amplifiers configured in a decompensated voltage-feedback architecture. The THS402x are stable with gain configurations of 10 V/V or greater. These amplifiers is built using a greater than 30-V, complementary, bipolar process with NPN and PNP transistors possessing an f_T of several GHz. This configuration results in exceptionally high-performance amplifiers with wide bandwidth, high slew rate, fast settling time, and low distortion.

6.2 Functional Block Diagram

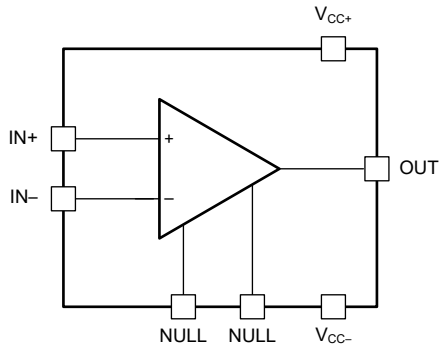

Figure 6-1. THS4021: Single Channel

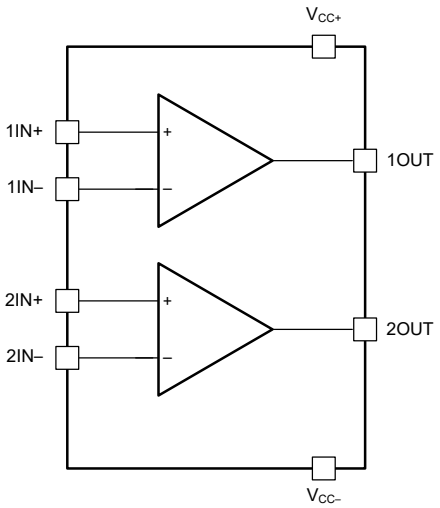

Figure 6-2. THS4022: Dual Channel

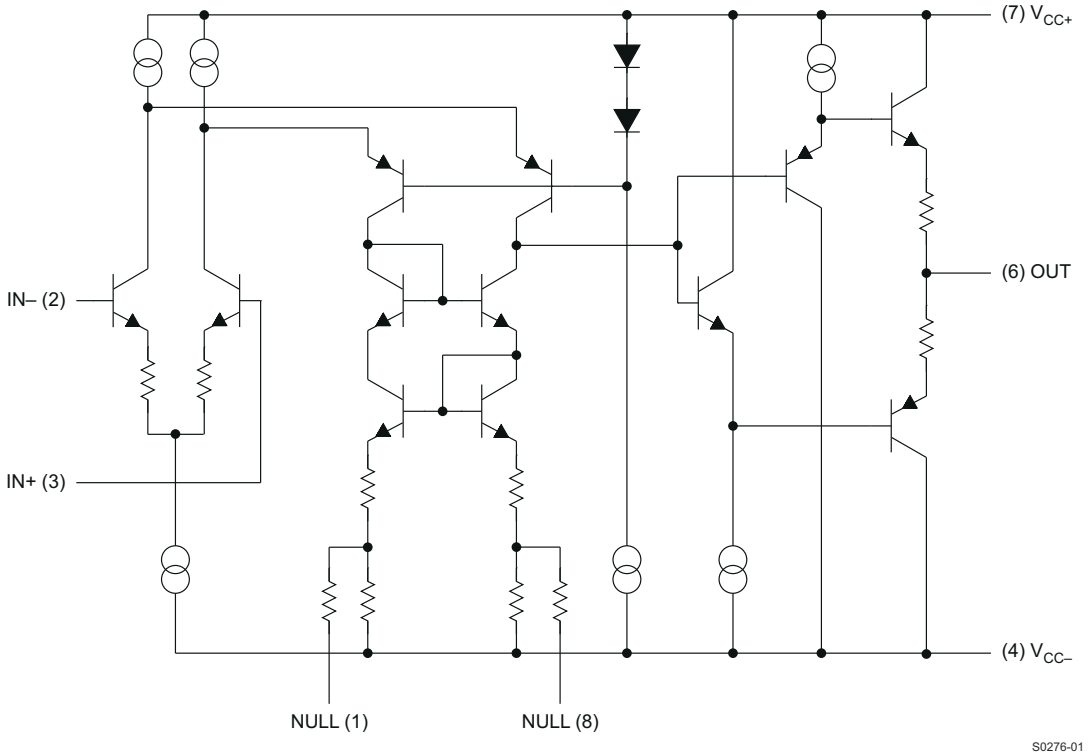

Figure 6-3. THS4021 Simplified Schematic

6.3 Feature Description

6.3.1 Offset Nulling

The THS402x have a very low input offset voltage for high-speed amplifiers. However, if additional correction is required, an offset nulling function has been provided on the THS4021. To adjust the input offset voltage, place a potentiometer between pin 1 and pin 8 of the device, and tie the wiper to the negative supply. Figure 6-4 shows this feature.

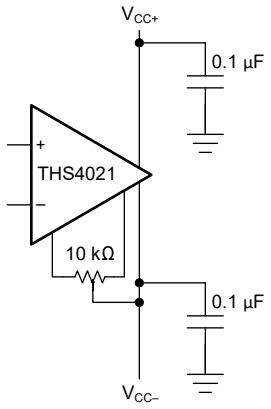

Figure 6-4. Offset Nulling Schematic

6.4 Device Functional Modes

The THS402x family has a single functional mode and can be used with both single-supply or split power-supply configurations. The power-supply voltage must be greater than 9 V (±4.5 V) and less than 33 V (±16.5 V).

7 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

7.1 Application Information

7.1.1 Driving a Capacitive Load

The THS402x are internally compensated to maximize bandwidth and slew-rate performance. To maintain stability, take additional precautions when driving capacitive loads with a high-performance amplifier. As a result of the internal compensation, significant capacitive loading directly on the output node decreases the device phase margin, and potentially lead to high-frequency ringing or oscillations. Therefore, for capacitive loads greater than 10 pF, place an isolation resistor in series with the output of the amplifier. Figure 7-1 shows this configuration. For most applications, a minimum resistance of 20 Ω is recommended. In 75-Ω transmission systems, setting the series resistor value to 75 Ω is a beneficial choice because this value isolates any capacitance loading and provides source impedance matching.

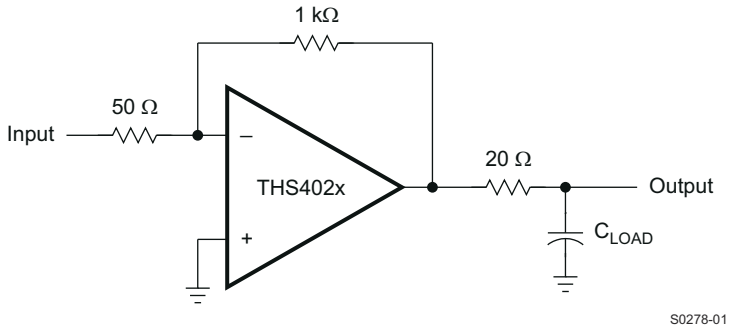

Figure 7-1. Driving a Capacitive Load

7.1.2 General Configuration

When receiving low-level signals, limiting the bandwidth of the incoming signals into the system is often required. Figure 7-2 shows how the simplest way to accomplish this limiting is to place an RC filter at the noninverting pin of the amplifier.

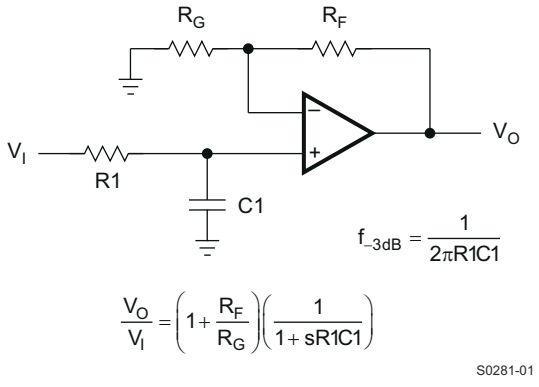

Figure 7-2. Single-Pole Low-Pass Filter

7.2 Power Supply Recommendations

The THS402x devices are designed to operate on power supplies ranging from ±4.5 V to ±16 V (single-ended supplies of 9 V to 32 V). Use a power-supply accuracy of 5% or better. When operated on a board with high-speed digital signals, make sure to provide isolation between digital signal noise and the analog input pins. The THS4021 and THS4022 are connected to the positive power supply (V_{CC+}) through pin 7 and pin 8, respectively. Both devices use pin 4 for the negative power supply (V_{CC-}). Decouple each supply pin to GND as close to the device as possible.

7.3 Layout

7.3.1 Layout Guidelines

To achieve the levels of high-frequency performance of the THS402x, follow proper printed-circuit board (PCB), high-frequency design techniques. The following is a general set of guidelines. In addition, a THS402x evaluation board is available to use as a guide for layout or for evaluating the device performance.

- **Ground planes**—make sure that the ground plane used on the board provides all components with a low-inductive ground connection. However, in the areas of the amplifier inputs and output, the ground plane can be removed to minimize stray capacitance.
- **Proper power-supply decoupling**—use a 6.8-µF tantalum capacitor in parallel with a 0.1-µF ceramic capacitor on each supply pin. Sharing the tantalum capacitor among several amplifiers is possible depending on the application, but always use a 0.1-µF ceramic capacitor on the supply pin of every amplifier. In addition, place the 0.1-µF capacitor as close as possible to the supply pin. As this distance increases, the inductance in the connecting trace makes the capacitor less effective. Strive for distances of less than 0.1 inch (2.54 mm) between the device power pins and the ceramic capacitors.
- **Short trace runs or compact part placements**—optimum high-frequency performance is achieved when stray series inductance has been minimized. To realize this, make the circuit layout as compact as possible, thereby minimizing the length of all trace runs. Pay particular attention to the inputs of the amplifier, keeping the trace lengths as short as possible. This layout helps to minimize stray capacitance at the input of the amplifier.

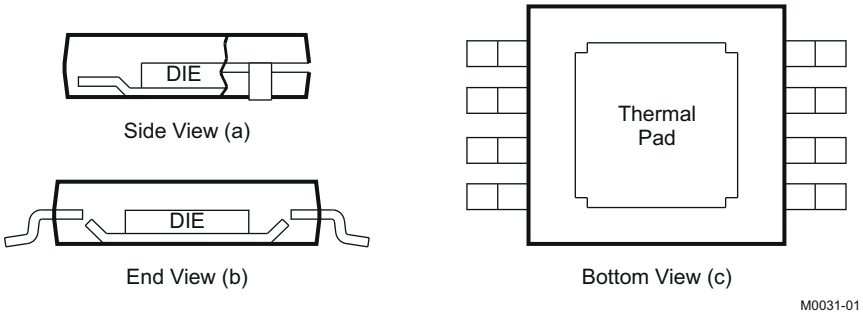
7.3.1.1 General PowerPAD™ Integrated Circuit Package Design Considerations

The THS402x is available in a thermally-enhanced DGN package, which is a member of the PowerPAD™ integrated circuit package family. Figure 7-3 **a** and Figure 7-3 **b** show that this package is constructed using a downset leadframe upon which the die is mounted. Figure 7-3 **c** that this arrangement results in the leadframe being exposed as a thermal pad on the underside of the package. Because this thermal pad has direct thermal contact with the die, excellent thermal performance can be achieved by providing a good thermal path away from the thermal pad.

The PowerPAD integrated circuit package allows for both assembly and thermal management in one manufacturing operation. During the surface-mount solder operation (when the leads are being soldered), the thermal pad can also be soldered to a copper area underneath the package. Through the use of thermal paths within this copper area, heat can be conducted away from the package into either a ground plane or other heat dissipating device.

The PowerPAD integrated circuit package represents a breakthrough in combining the small area and ease of assembly of the surface mount with the previously awkward mechanical methods of heat sinking.

More complete details of the PowerPAD installation process and thermal management techniques are found in *PowerPAD Thermally-Enhanced Package*. This document is found on the TI website (www.ti.com) by searching on the keyword PowerPAD. The document can also be ordered through your local TI sales office; refer to SLMA002 when ordering.



NOTE: The thermal pad (PowerPAD integrated circuit package) is electrically isolated from all other pins and can be connected to any potential from V_{CC-} to V_{CC+}. Typically, the thermal pad is connected to the ground plane because this plane tends to physically be the largest and is able to dissipate the most amount of heat.

Figure 7-3. Views of Thermally-enhanced DGN Package

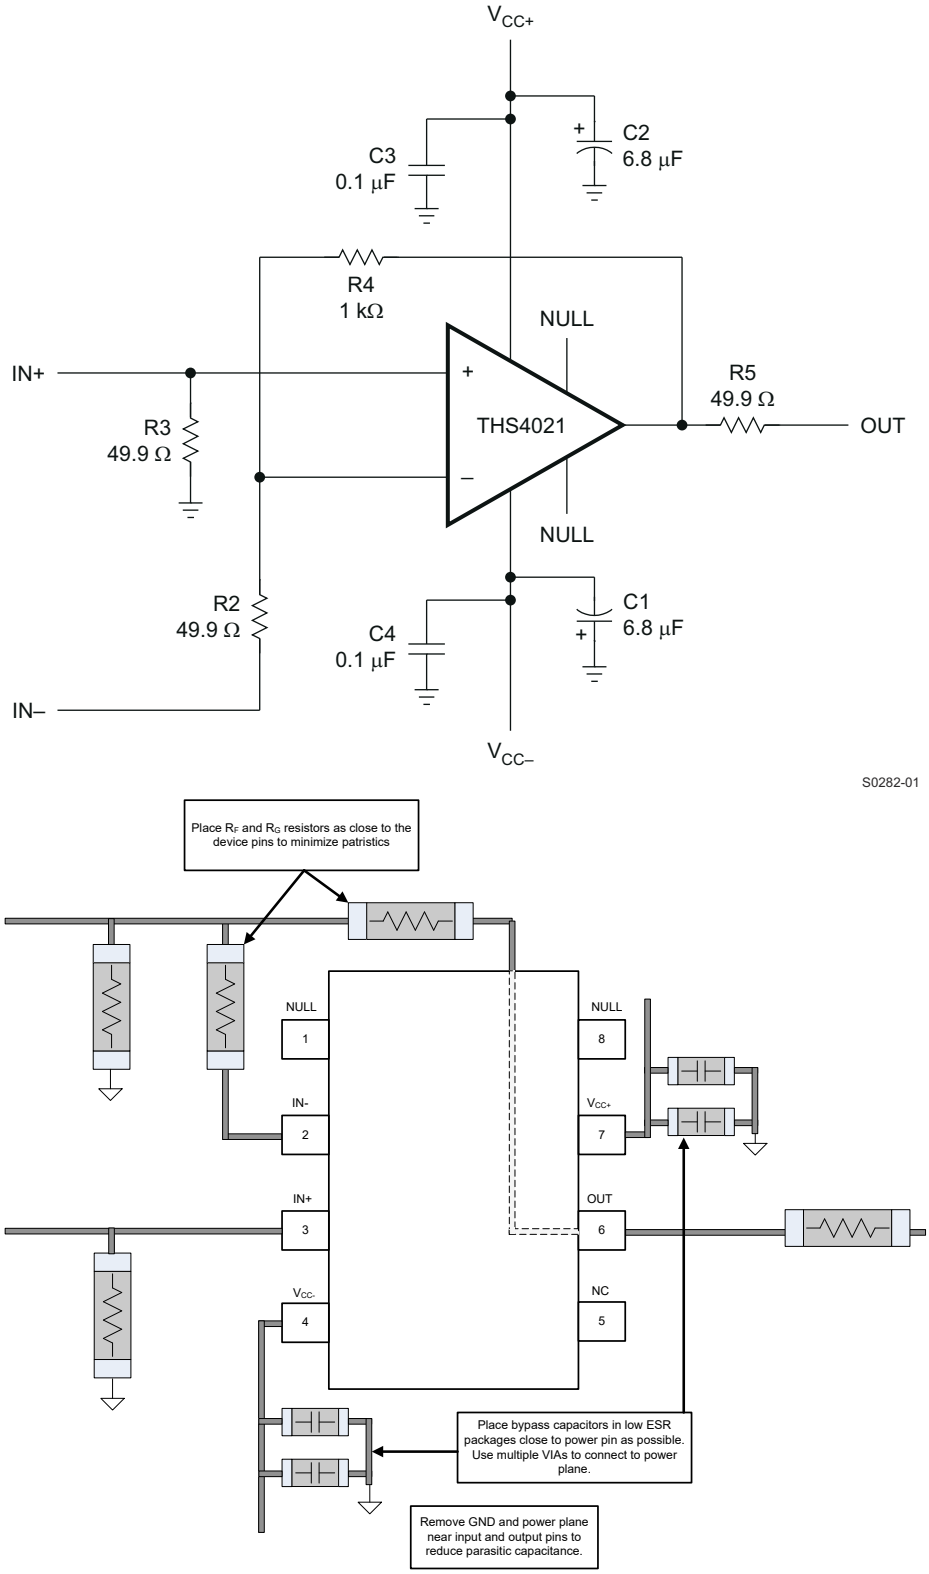

Figure 7-4. Layout Recommendations

8 Device and Documentation Support

TI offers an extensive line of development tools. Tools and software to evaluate the performance of the device, generate code, and develop solutions are listed below.

8.1 Documentation Support

8.1.1 Related Documentation

For related documentation, see the following:

- Texas Instruments, *Noise Analysis in Operational Amplifier Circuits* application report
- Texas Instruments, *PowerPAD Thermally Enhanced Package* application report
- Texas Instruments, *THS4021 High-Speed Operational Amplifier Evaluation Module* user's guide
- Texas Instruments, *THS4022 Dual High-Speed Operational Amplifier Evaluation Module* user's guide

8.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

8.3 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

8.4 Trademarks

PowerPAD™ and TI E2E™ are trademarks of Texas Instruments.
All trademarks are the property of their respective owners.

8.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

8.6 Glossary

TI Glossary	This glossary lists and explains terms, acronyms, and definitions.

9 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision E (March 2024) to Revision F (July 2024)	Page
• Deleted Total harmonic distortion + noise and Intermodulation distortion specifications from *Electrical Characteristics: THS4021D and THS4022DGN*	6

Changes from Revision D (May 2023) to Revision E (March 2024)	Page
• Deleted THS4022 D package from the document	1
• Updated *Simplified Application* figure to show correct pin names	1
• Updated closed-loop bandwidth and supply current in *Description*	1
• Updated *Thermal Information: THS4022*	5

- Changed title of *Electrical Characteristics: THS4021 (D Package)* to *Electrical Characteristics: THS4021D and THS4022DGN* 6
- Changed Channel-to-channel crosstalk from –60 dB to –54 dB in *Electrical Characteristics THS4021D and THS4022DGN*B 6
- Changed title of *Electrical Characteristics: THS4021 (DGN Package) and THS4022 (D and DGN Packages)* to *Electrical Characteristics: THS4021DGN* 8
- Changed title of *Typical Characteristics: THS4021 (D Package)* to *Typical Characteristics: THS4021D and THS4022DGN* 10
- Changed V_{CC} from ±5 V to ±15 V in *Typical Characteristics: THS4021D and THS4022DGN* 10
- Updated *Power-Supply Rejection Ratio vs Frequency* figure legend in *Typical Characteristics: THS4021D and THS4022DGN* 10
- Changed title of *Typical Characteristics:THS4021 (DGN Package) and THS4022 (D and DGN Packages)* to Typical Characteristics:THS4021DGN 16
- Updated *Crosstalk vs Frequency* figure and moved to *Typical Characteristics: THS4021D and THS4022DGN* 16

10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
