

# TMUX136 電源オフ絶縁機能付き 6GHz、2チャンネル、2:1スイッチ

## 1 特長

- $V_{CC}$  範囲: 2.3V~4.8V
- 高性能スイッチ特性:
  - 帯域幅 (–3dB): 6.1GHz
  - $R_{ON}$  (標準値): 5.7 $\Omega$
  - $C_{ON}$  (標準値): 1.6pF
- 消費電流: 30 $\mu$ A (標準値)
- 特別な機能:
  - $I_{OFF}$  保護により、パワーダウン状態でのリーク電流を防止
  - 1.8V 互換制御入力 (SEL,  $\overline{EN}$ )
- フロースルーのピン配置により PCB レイアウトを簡素化
- [高速 I<sup>3</sup>C 信号と互換](#)
- ESD 性能:
  - 5kV、人体モデル (A114B、Class II)
  - 1kV、デバイス帯電モデル (C101)
- 小型の 10 ピン UQFN パッケージ (1.5mm × 2mm、0.5mm ピッチ)

## 2 アプリケーション

- I<sup>3</sup>C (SenseWire)
- モバイル産業用プロセッサ・インターフェイス (MIPI)
- サーバー
- ハンドセット: スマートフォン
- ノート PC
- タブレット: マルチメディア
- レジ用電子機器
- 現場用計測機器
- ポータブル・モニタ

## 3 概要

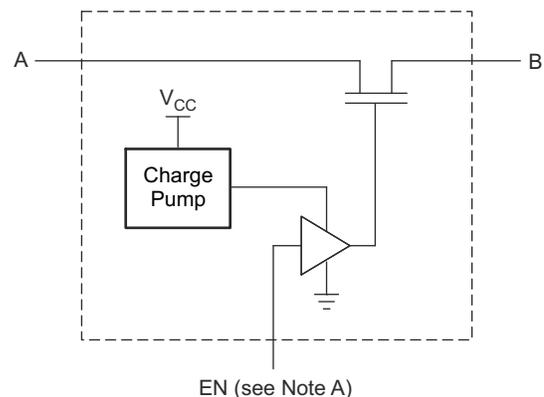

TMUX136 デバイスは、6GHz、2チャンネルの高性能 2:1 スイッチで、差動およびシングル・エンドの両方の信号をサポートします。このデバイスは、2.3V~4.8V の広い  $V_{CC}$  範囲に対応し、電源オフ保護機能をサポートしていることから、 $V_{CC}$  ピンに電力が供給されていないときには強制的にすべての I/O ピンが高インピーダンス・モードとなります。TMUX136 の選択ピンは、1.8V 制御電圧と互換性があるため、低電圧プロセッサからの汎用 I/O (GPIO) と直接インターフェイスが可能です。入力と出力がデバイスの反対側にあるフロースルー・ピン配置により、レイアウトの配線が簡素化されます。このデバイスはオン抵抗が低くオン静電容量が小さいため、TMUX136 は I<sup>3</sup>C などの高速規格を含め、幅広いアナログ信号およびデジタル通信プロトコル規格のスイッチングをサポートするのに最適なデバイスです。

TMUX136 は、小型の 10 ピン UQFN パッケージで供給されており、そのサイズはわずか 1.5mm × 2mm であることから、PCB 面積が限られている場合に便利です。

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.
- (3) All voltages are with respect to ground, unless otherwise specified.

### 6.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±5000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

## 8 Detailed Description

### 8.1 Overview

The TMUX136 device is a 2-channel, 2:1, switch specifically designed for the switching of high-speed signals in handset and consumer applications, such as cell phones, tablets, and notebooks but may be used for any high speed application. The wide bandwidth (6.1 GHz) of this switch allows signals to pass with minimum edge and phase distortion. The switch is bidirectional and offers little or no attenuation of the high-speed signals at the outputs and will support both single-ended and differential signals. The device also has a low power mode that reduces the power consumption to 5  $\mu$ A for portable applications with a battery or limited power budget.

The TMUX136 device integrates ESD protection cells on all pins, is available in a tiny UQFN package (1.5 mm  $\times$  2 mm) and is characterized over the free-air temperature range from  $-40^{\circ}\text{C}$  to  $+125^{\circ}\text{C}$ .

### 8.2 Functional Block Diagram

Note A: EN is the internal enable signal applied to the switch.

### 8.3 Feature Description

#### 8.3.1 Low Power Mode

The TMUX136 has a low power mode that reduces the power consumption to 5  $\mu$ A while the device is not in use. To put the device in low power mode and disable the switch, the bus-switch enable pin  $\overline{\text{EN}}$  must be supplied with a logic High signal.

### 8.4 Device Functional Modes

#### 8.4.1 High Impedance Mode

The TMUX136 has a high impedance mode that places all the signal paths in a Hi-Z state while the device is not in use. As provided in 表 8-1, to put the device in high impedance mode and disable the switch, the bus-switch enable pin  $\overline{\text{EN}}$  must be supplied with a logic *High* signal.

表 8-1. Function Table

SEL	EN	SWITCH STATUS
X	High	Both A PORT and B PORT switches in High-Z
Low	Low	COM to A PORT
High	Low	COM to B PORT

## 9 Application and Implementation

### 注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくこととなります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

### 9.1 Application Information

There are many applications in which microprocessors or controllers have a limited number of I/Os. The TMUX136 solution can effectively expand the limited I/Os by switching between multiple buses to interface them to a single microprocessor or controller. A common application where the TMUX136 is as a I<sup>3</sup>C 1:2 multiplexer. In this application, the TMUX136 is used to route communicating between different DDR modules from a single controller within a server, as shown in 図 9-1. The high bandwidth of the TMUX136 will preserve signal integrity at even the fastest communication protocols that may be used in server applications, such as I<sup>3</sup>C.

### 9.2 Typical Application

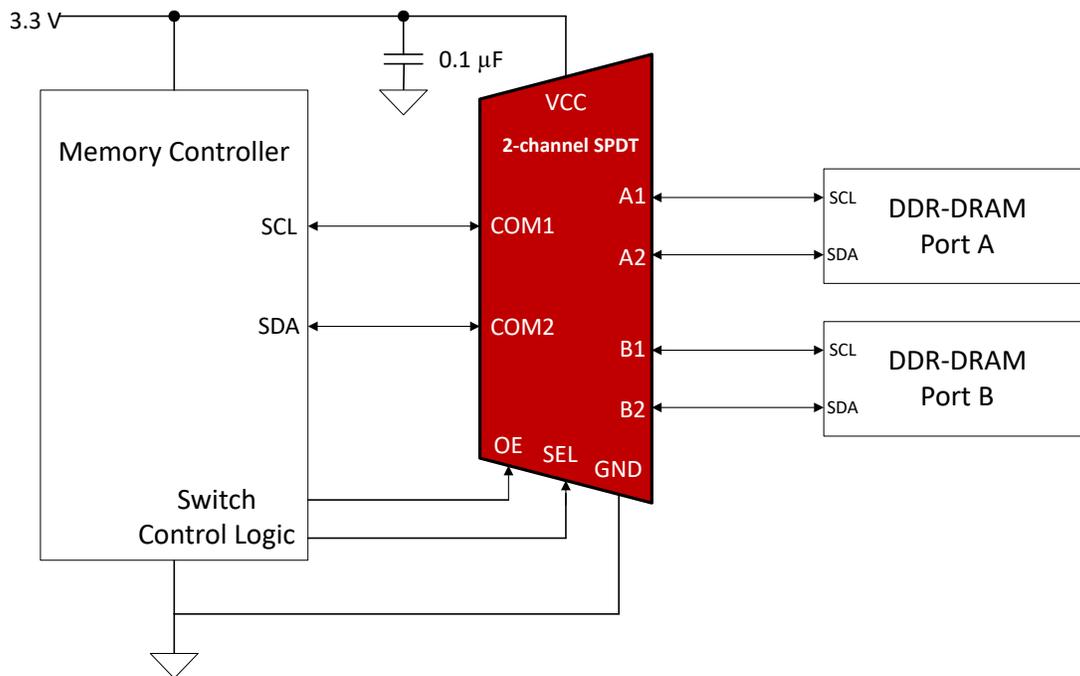

図 9-1. Typical Application

The TMUX136 supports I<sup>3</sup>C standard by maintaining signal integrity through the switch. 表 9-1 details how the TMUX136 specifications make this device optimal for switching I<sup>3</sup>C signals.

表 9-1. TMUX136 I<sup>3</sup>C Compatibility

	I <sup>3</sup> C Requirements	TMUX136 Specification
Voltage (I/O)	1.0 V, 1.2 V, 1.8 V, 3.3 V	0-3.6 V
Frequency	Up to 12.5 MHz	6 GHz Bandwidth
Capacitance	50 pF maximum bus capacitance	<2 pF On/Off Capacitance

### 9.2.1 Design Requirements

The TMUX136 has internal 6-M $\Omega$  pull-down resistors on SEL and  $\overline{\text{EN}}$ , so no external resistors are required on the logic pins. The internal pull-down resistor on SEL allows the PORT A channel to be selected by default. The internal pull-down resistor on  $\overline{\text{EN}}$  enables the switch when power is applied to V<sub>CC</sub>.

### 9.2.2 Detailed Design Procedure

The TMUX136 can operate without any external components; however, TI recommends that unused pins must be connected to ground through a 50- $\Omega$  resistor to prevent signal reflections back into the device.

## 9.3 Power Supply Recommendations

TI recommends placing a bypass capacitor as close to the supply pin  $V_{CC}$  as possible to help smooth out lower frequency noise to provide better load regulation across the frequency spectrum.

## 9.4 Layout

### 9.4.1 Layout Guidelines

Place supply bypass capacitors as close to  $V_{CC}$  pin as possible and avoid placing the bypass capacitors near the high speed traces.

The high-speed signal paths must should be no more than 4 inches long; otherwise, the eye diagram performance may be degraded.

Route the high-speed signals using a minimum of vias and corners which reduces signal reflections and impedance changes. When a via must be used, increase the clearance size around it to minimize its capacitance. Each via introduces discontinuities in the signal's transmission line and increases the chance of picking up interference from the other layers of the board. Be careful when designing test points on twisted pair lines; through-hole pins are not recommended.

When it becomes necessary to turn  $90^\circ$ , use two  $45^\circ$  turns or an arc instead of making a single  $90^\circ$  turn. This reduces reflections on the signal traces by minimizing impedance discontinuities.

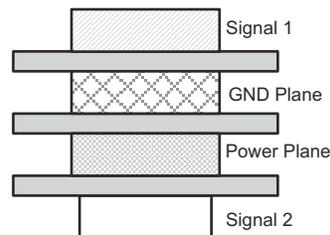

Do not route high speed signal traces under or near crystals, oscillators, clock signal generators, switching regulators, mounting holes, magnetic devices or ICs that use or duplicate clock signals.

Avoid stubs on the high-speed signals traces because they cause signal reflections. If a stub is unavoidable, then the stub must be less than 200 mm.

Route all high-speed signal traces over continuous GND planes, with no interruptions.

Avoid crossing over anti-etch, commonly found with plane splits.

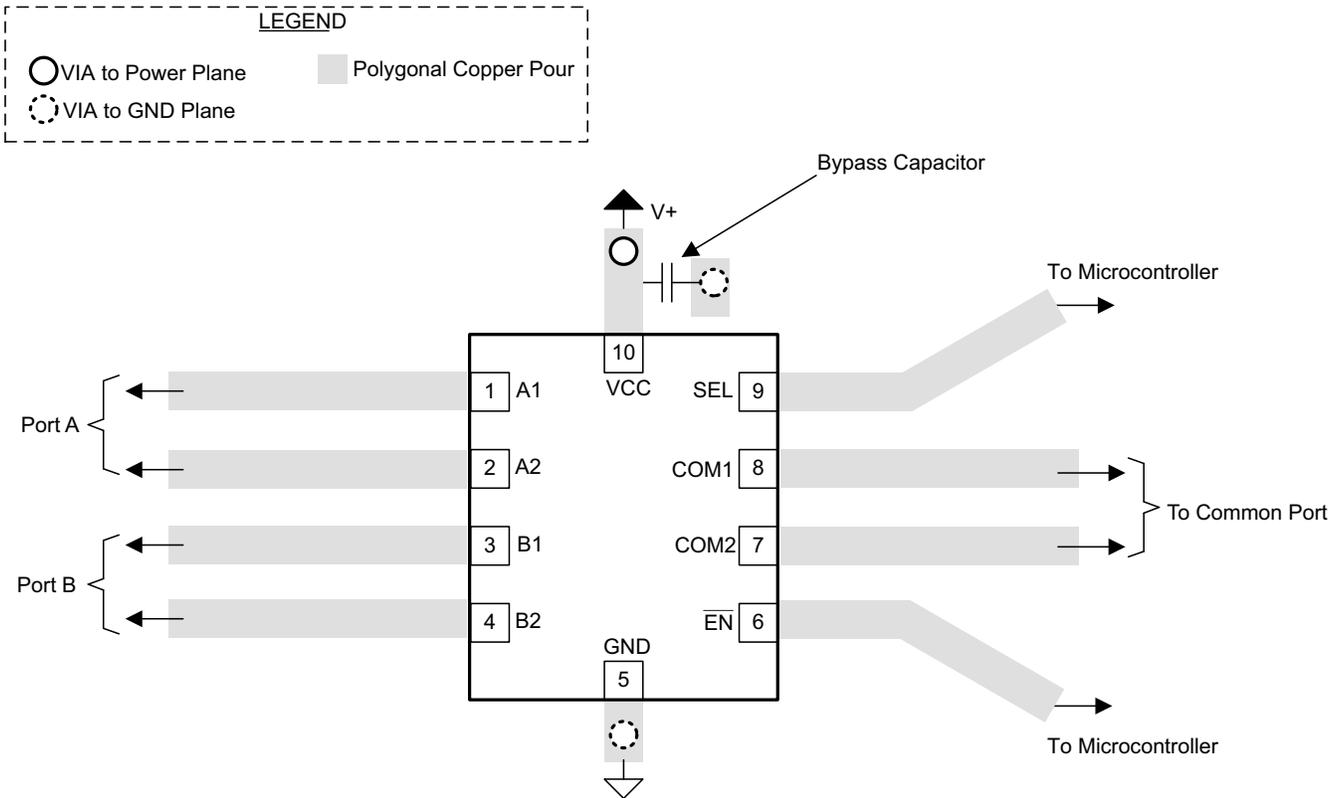

Due to high frequencies, a printed circuit board with at least four layers is recommended; two signal layers separated by a ground and power layer as shown in [Figure 9-18](#).

**Figure 9-18. Four-Layer Board Stack-Up**

The majority of signal traces must run on a single layer, preferably Signal 1. Immediately next to this layer must be the GND plane, which is solid with no cuts. Avoid running signal traces across a split in the ground or power plane. When running across split planes is unavoidable, sufficient decoupling must be used. Minimizing the number of signal vias reduces EMI by reducing inductance at high frequencies.

### 10.5 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

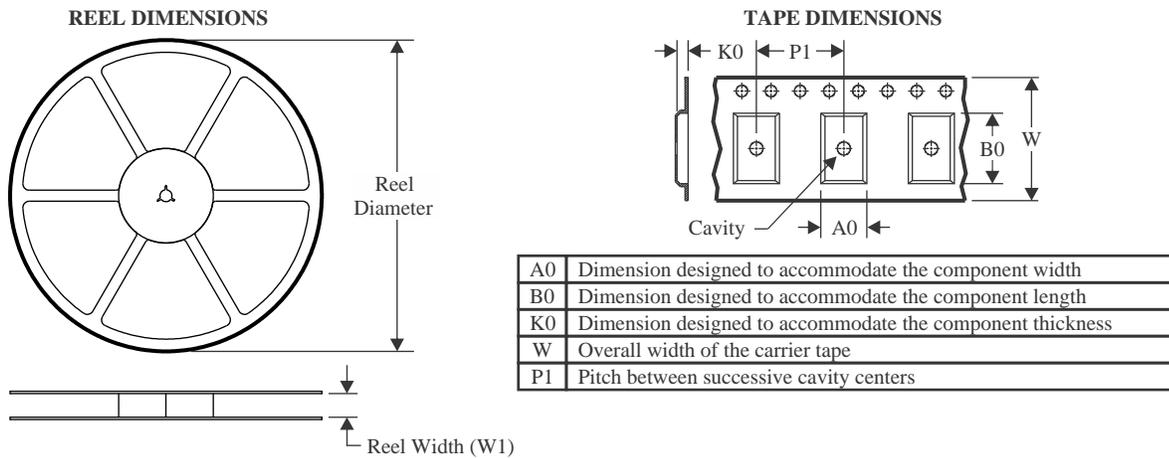

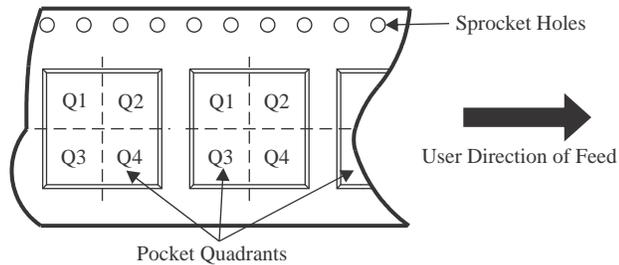

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
