

# Quick, Low-Cost Access to Industry-Leading PFC Performance

C2000™ 32-bit C28x Piccolo™ MCU devices are leading the way for end markets requiring power factor correction (PFC), offering best-in-class efficiency, PF and THD performance.

## Power Factor Correction

From motor-control applications to high-efficiency telecom and server power supplies, PFC is used in just about every application based on an AC source. Independent of the application, designers are focused on efficiency, PF and THD performance.

## The Piccolo C28x MCU Advantage

The Piccolo MCU series offers a full complement of digital controllers ranging from low-cost devices tailored for digital PFC to high-end, multi-processor devices with enhanced connectivity, and features code-compatibility across the entire device series. The C28x MCU core is a native 32-bit processor, with extensions such as a floating-point unit and Viterbi complex math co-processor. Communications peripherals range from SPI, I<sup>2</sup>C and UART to USB and emulated PMBus. Operating frequencies range from 40 MHz to 90 MHz.

## Dedicated Control Applications Processor

On select Piccolo F2803x and F2806x devices, the standard C28x MCU core is augmented with an additional Control Law Accelerator (CLA). This secondary processor core has direct access to digital power and control-based peripherals such as the ADCs, comparators and PWM units, and operates independently of the main CPU. Natively supporting 32-bit floating-point math, it's like getting two processors in one package! The CLA is supported by a library of digital power and motor control libraries, and is fully programmable in a C level language. The CLA, running at the same clock frequency of the main CPU, offers devices with up to 180 MIPS of real-time control performance.

## C2000 Dual-Interleaved PFC Development Board

- Code compatible support for Piccolo Entry Line, F2802x, F2803x and F2806x series MCUs
  - CPU utilization approximately 30 MIPS
- Industry-standard interleaved boost PFC topology
- 95 to 265VAC input at 47 to 63 Hz
- 400VDC / 700 watt output DC bus
- 200-KHz switching frequency
- THD 1.5%, PF 0.99, 94%+ efficiency
- Isolated JTAG on Piccolo F28035 controlCARD
- Integrated power metering functions for input RMS current, voltage, power and frequency measurement
- ILPFC library for CLA support

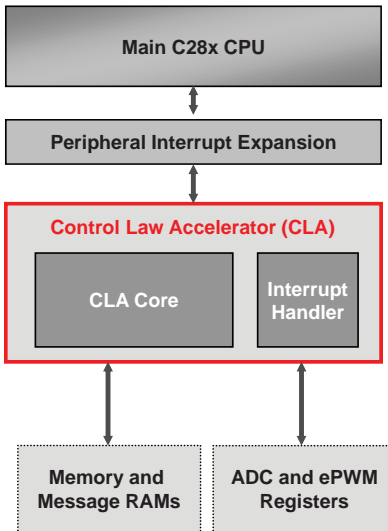

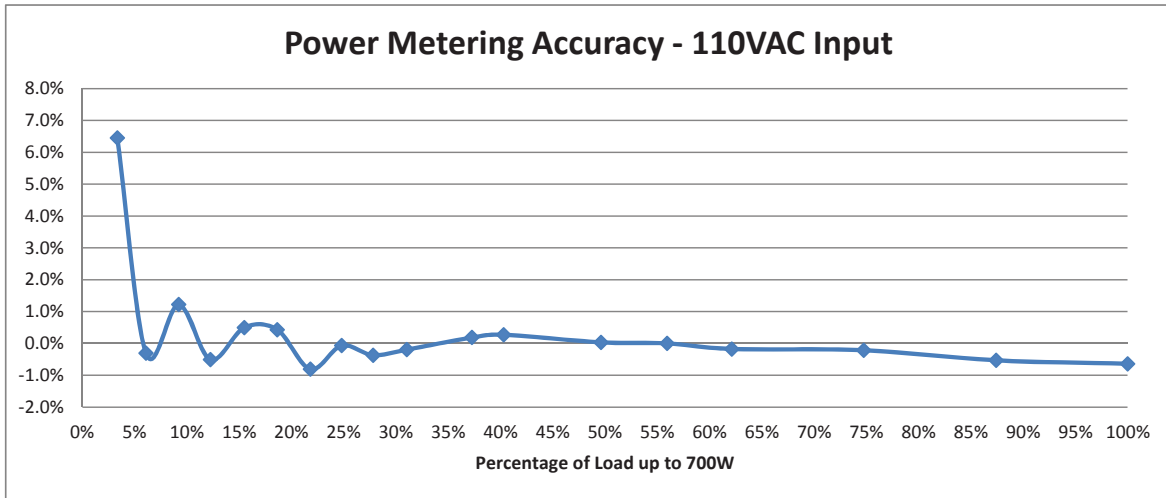

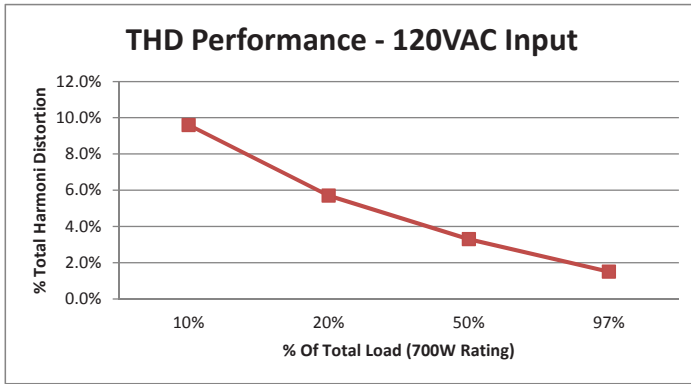

## controlSUITE™ Software Package

## C2000 Devices for Digital PFC

Device	Processor (MHz)	CLA (MHz)	Flash Memory (KB)	Communications	1K Web Price (\$ U.S.)
F2802x0 Piccolo Entry Line	40 – 50	–	16 – 64	I <sup>2</sup> C, SPI, UART	Starting at \$1.60
F2802x Piccolo Series	40 – 60	–	16 – 64	I <sup>2</sup> C, SPI, UART	Starting at \$2.20
F2803x Piccolo Series	60	60	32 – 128	I <sup>2</sup> C, SPI, UART, LIN, CAN	Starting at \$3.05
F2806x Piccolo Series	90	90	128 – 256	I <sup>2</sup> C, SPI, UART, CAN, USB	Starting at \$4.95

## 2-phase Interleaved PFC Evaluation Board Test Results – TMSILPFCKIT

### Control Law Accelerator (CLA)

- Independent, 32-bit floating-point math accelerator
  - Complete bus architecture and 8-state pipeline
  - Floating point-optimized execution units and registers
- Allows faster system response and higher frequency control loops
  - Simple interrupt handler reduces context switch time
  - No nested interrupts
  - Direct access to ADC and PWMs
- Reduces CPU load, allowing for more system functionality

### ADC and ePWM registers

- CLA is directly connected to the ADC and ePWM, allowing control loop execution without any main CPU intervention
- Capable of using the ADCs “just-in-time” interrupts

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
