

**ABSTRACT**

This user's guide describes the characteristics, operation, and use of the TPS92519-Q1 dual 2-A synchronous high current buck LED driver evaluation module (EVM). A complete schematic diagram, printed-circuit board layouts, and bill of materials are included in this document.

## 1 Introduction

The TPS92519EVM-169 evaluation module (EVM) helps designers evaluate the operation and performance of the TPS92519-Q1 buck switching regulator designed for high-current LED drive applications. The TPS92519-Q1 is designed to control two drivers of high-brightness light-emitting diodes (LED) and features a wide input voltage range (5.5 V to 65 V), PWM dimming capability, analog dimming capability, and input undervoltage protection.

## 2 Warnings and Cautions

Observe the following precautions when using the TPS92519EVM-169.

### CAUTION

**Caution! Do not leave EVM powered when unattended.**

### HOT SURFACE:

**Caution Hot Surface! Contact may cause burns. Do not touch. Please take the proper precautions when operating.**

### HIGH VOLTAGE:

**Danger High Voltage! Electric shock possible when connecting board to live wire. Board must be handled with care by a professional. For safety, use of isolated test equipment with overvoltage and overcurrent protection is highly recommended.**

### WARNING

When choosing your LED component (not included with this EVM), the end user must consult the LED data sheet supplied by the LED manufacturer to identify the EN62471 Risk Group Rating and review any potential eye hazards associated with the LED chosen. Always consider and implement the use of effective light filtering and darkening protective eye wear and be fully aware of surrounding laboratory-type set-ups when viewing intense light sources that can be required to minimize or eliminate such risks in order to avoid accidents related to temporary blindness.

## 3 Description

This user's guide describes the specifications, board connection descriptions, characteristics, operation, and use of the TPS92519-Q1, dual 2.0-A synchronous buck LED driver evaluation module (TPS92519EVM-169). The TPS92519-Q1 device implements an adaptive on-time average current mode control and is designed to be compatible with shunt FET dimming techniques and LED matrix manager-based dynamic beam headlamps. The adaptive on-time control provides near constant switching frequency that can be set to 385/435 kHz or 2/2.1 MHz. Inductor current sensing and closed-loop feedback enables better than  $\pm 4\%$  accuracy over wide input voltage, output voltage and ambient temperature range.

TPS92519EVM-169 provides a high-brightness LED driver that is designed to operate with an input voltage in the range of 5.5 V to 65 V. The EVM is set up for a default output current of 2 A for an LED stack between approximately 3 V and nearly 60 V operating at 385/435 kHz. The TPS92519-Q1 helps provide high efficiency, fast PWM dimming, and accurate wide-range analog dimming.

### 3.1 Typical Applications

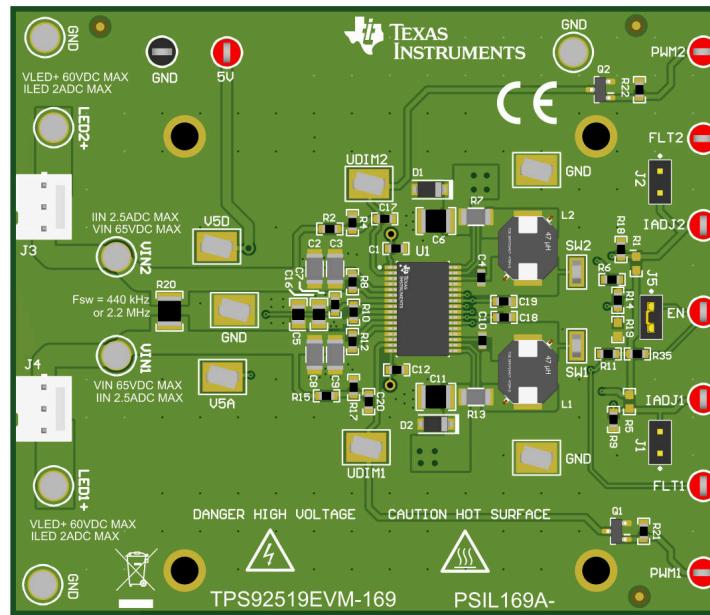

This converter design describes an application of the TPS92519-Q1 as an LED driver with the specifications listed in [Table 3-3](#). For applications with a different input voltage range or different output voltage range, refer to the [TPS92519-Q1 4.5-V to 65-V Dual 2-A Synchronous Buck LED Driver Data Sheet](#).

### 3.2 Features

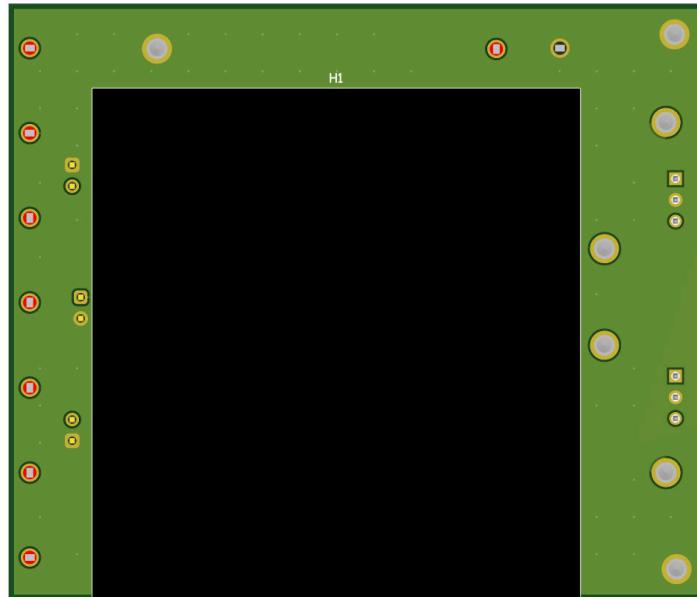

- AEC-Q100 qualified for automotive applications
  - Grade 1:  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  ambient operating temperature
  - Device HBM classification level H1C
  - Device CDM classification level C2
- Up to 2-A output current with 4% accuracy
- AEC-Q100 qualified for automotive applications
  - Grade 1:  $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  ambient operating temperature
  - Device HBM classification level H1C
  - Device CDM classification level C2
- Up to 2-A output current with 4% accuracy
- Cycle-by-cycle switch overcurrent protection
- Nominal switching frequency
  - 385-kHz / 435-kHz for channel 1 and channel 2
  - 2-MHz / 2.1MHz for channel 1 and channel 2
- 4.5-V to 65-V wide input voltage range
- Adaptive on-time average current control
- LED open and short fault monitoring and reporting
- Switch thermal protection
- Functional Safety-Capable
- 4.5-V to 65-V wide input voltage range
- Adaptive on-time average current control
- LED open and short fault monitoring and reporting
- Switch thermal protection
- Functional Safety-Capable - Documentation available to aid functional safety system design
- Advanced dimming operation
  - Precision analog dimming
  - Supports external PWM dimming input
  - Optimized for external shunt dimming including LED Matrix Manager

### 3.3 Connector and Test Point Description

This section describes the connectors and test points on the EVM and how to properly connect, setup, and use the TPS92519EVM-169.

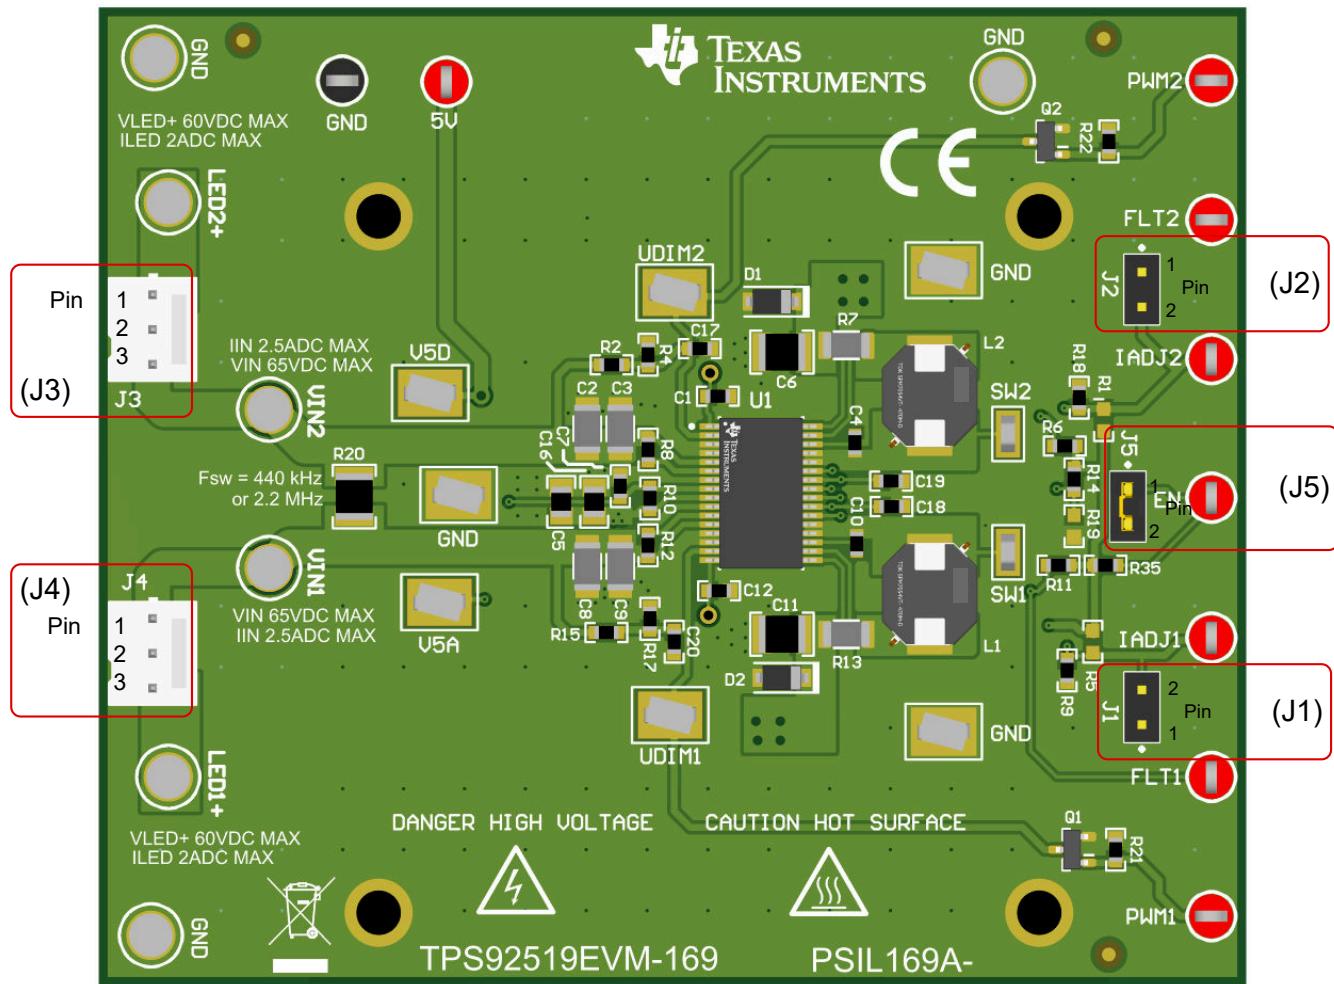

**Figure 3-1. TPS9519EVM-169 Top View – EVM Functions and Features**

**Figure 3-2. TPS9519EVM-169 Bottom View – EVM Functions and Features**

**Description**

This section describes the connectors, names, and descriptions.

**Figure 3-3. TPS92519EVM-169 Connector Numbers and Locations**

**Table 3-1. Connectors**

Connector	Description
J1	This connector is used in conjunction with a shunt to disable channel 1. Note this connector is designed to be used when R5 is loaded to create a resistor divider with V5D. If an external supply is used to provide the voltage to IADJ pin, then the shunt shorts the supply when inserted.
J2	This connector is used in conjunction with a shunt to disable channel 2. Note this connector is designed to be used when R1 is loaded to create a resistor divider with V5D. If an external supply is used to provide the voltage to IADJ pin, then the shunt shorts the supply when inserted.
J3	This connector allows for creating a connector that mates to J3, where pin 1 is LED2+, pin 2 is GND, and pin 3 is VIN2.
J4	This connector allows for creating a connector that mates to J4, where pin 1 is VIN1, pin 2 is GND, and pin 3 is LED1+.
J5	J5 is used in conjunction with a shunt to disable both channels and the device is put into sleep mode.

This section describes the test points, names, and descriptions.

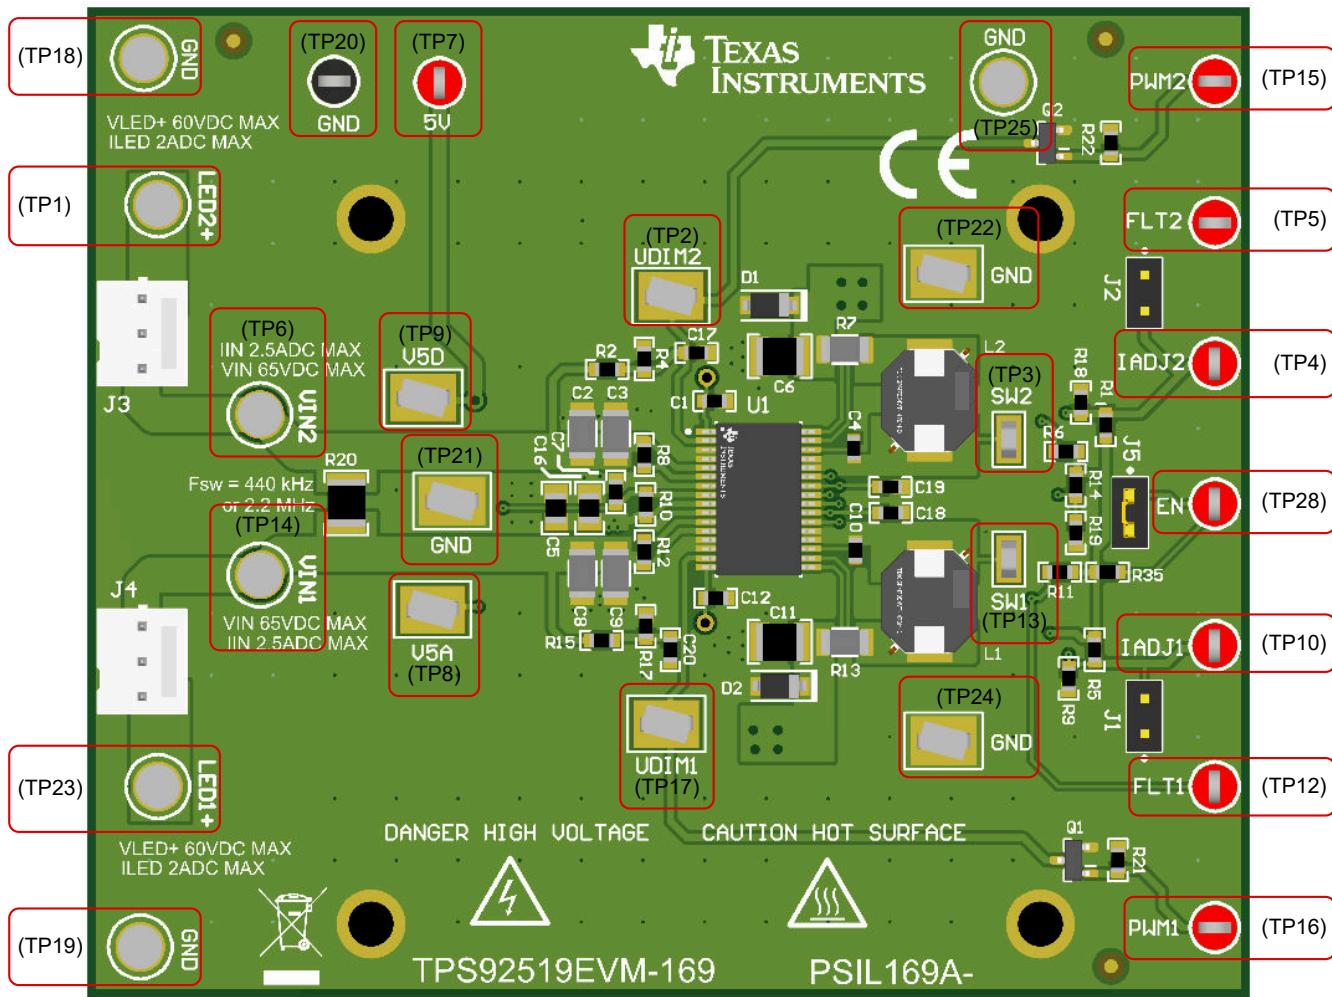

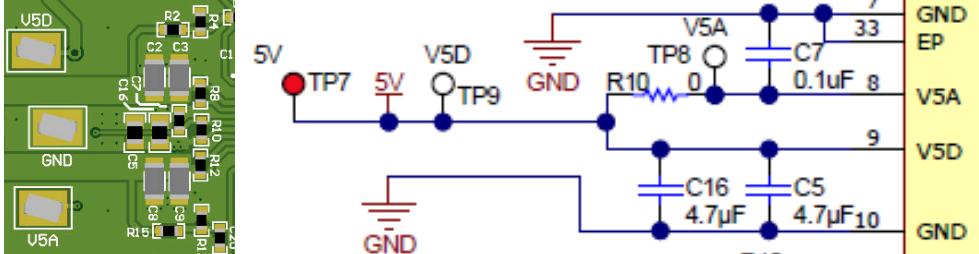

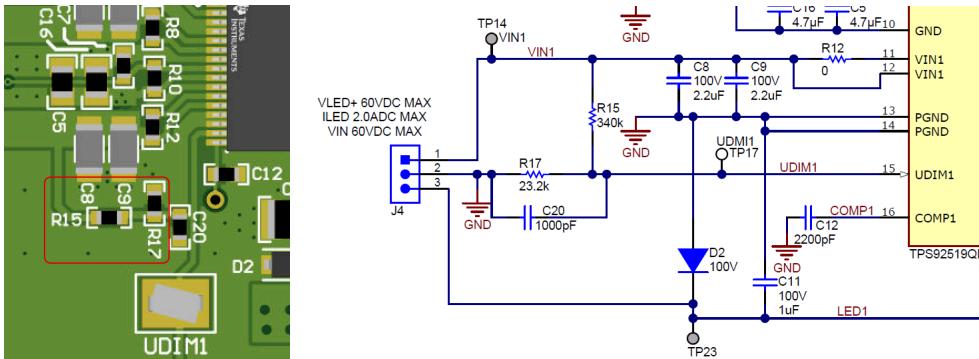

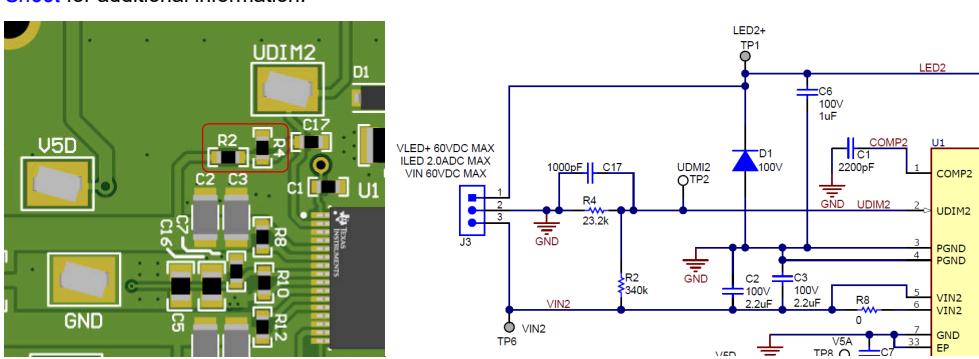

Figure 3-4. TPS9259EVM-169 Test point Numbers and Locations

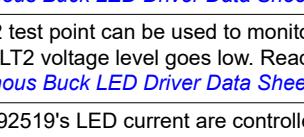

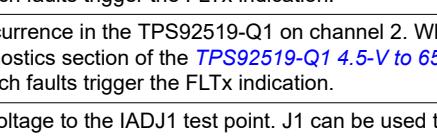

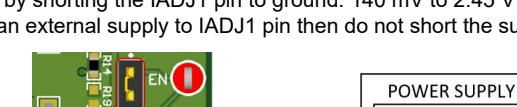

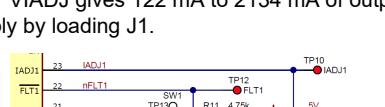

Table 3-2. Test Points

Test Point	Description
GND (TP11, TP18, TP19, TP20, TP21, TP22, TP24)	Larger metal turrets and test points allow for multiple connection to grounds across the board.
VIN1 (TP14)	The VIN1 test point allows for voltage and current measurement of the power applied to the VIN1 pin of the TPS92519-Q1. R20 is by default loaded and connects VIN1 to VIN2 and must be removed if is desired to connect VIN1 and VIN2 separately.
VIN2 (TP6)	The VIN2 test point allows for voltage and current measurement of the power applied to the VIN2 pin of the TPS92519-Q1. R20 is by default loaded and connects VIN1 to VIN2 and must be removed if is desired to connect VIN1 and VIN2 separately.
5V (TP7)	The 5-V test point is for external 5-V supply to power both V5D and V5A when R10 is loaded.
VLED1+ (TP23)	The VLED1 test point allows for connection of the LED loads to channel-1 output. Large turrets allow for multiple connections.
VLED2+ (TP1)	The VLED2 test point allows for connection of the LED loads to channel-2 output. Large turrets allow for multiple connections.
SW1 (TP13)	The SW1 test point allows for observing the switch node for channel 1 during operation with an oscilloscope.
SW2 (TP3)	The SW2 test point allows for observing the switch node for channel 2 during operation with an oscilloscope.

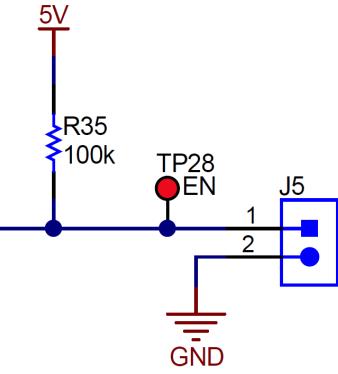

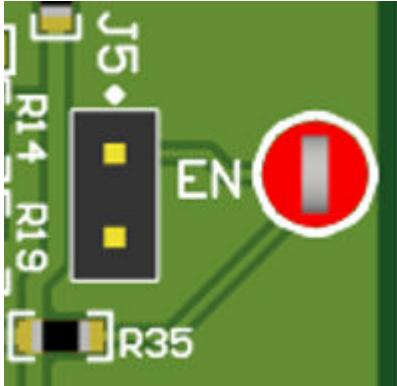

**Table 3-2. Test Points (continued)**

Test Point	Description
5VD (TP9)	<p>V5D test point connects directly to the V5D digital pin of the TPS92519-Q1. The test point can be used to monitor the voltage or used to supply the power directly to the V5D pin. Note if doing current measurements R10 connects 5VD rail to V5A, which consumes power but can be separated by removing R10 and supplying V5A externally.</p> 
V5A (TP8)	<p>V5A test point connects directly to V5A pin of the TPS92519-Q1. This can be used to monitor the voltage or current used to supply the power directly to V5A pin assuming R10 has been removed and is applied externally. By default V5D and V5A are shorted together using R10 and the supply is provided by the 5V supply.</p>
UDIM1 (TP17)	<p>UDIM1 test point allows for the direct connection of the UDIM1 pin of the TPS92519-Q1 for PWM dimming of channel 1. Note that when UDIM1 is below 1.02 V falling the channel is disabled. Read the External PWM Dimming and Input Undervoltage Lockout (UVLO) section in the <a href="#">TPS92519-Q1 4.5-V to 65-V Dual 2-A Synchronous Buck LED Driver Data Sheet</a> for additional information.</p> 
UDIM2 (TP2)	<p>UDIM2 test point allows for the direct connection of the UDIM2 pin of the TPS92519-Q1 for PWM dimming of channel 2. Note that when UDIM2 is below 1.02 V falling the channel is disabled. Read the External PWM Dimming and Input Undervoltage Lockout (UVLO) section in the <a href="#">TPS92519-Q1 4.5-V to 65-V Dual 2-A Synchronous Buck LED Driver Data Sheet</a> for additional information.</p> 

**Table 3-2. Test Points (continued)**

Test Point	Description
PWM1 (TP16)	<p>These are the test points used to perform external PWM dimming for channel 1. UDIM1 is inverted from PWM1.</p>  <p>PSIL169A- /M-169</p> <p>Circuit diagram for Channel 1:</p> <pre>     graph LR       PWM1((TP16)) --- CH1_PWM[CH1 PWM]       CH1_PWM --- 1       1 --- 2       2 --- 3       3 --- Q1[Q1 DMN62D0U-7]       Q1 --- 2       2 --- R21[100k]       R21 --- 2       2 --- GND     </pre>
PWM2 (TP15)	<p>These are the test points used to perform external PWM dimming for channel 2. UDIM2 is inverted from PWM2.</p>  <p>PSIL169A- /M-169</p> <p>Circuit diagram for Channel 2:</p> <pre>     graph LR       PWM2((TP15)) --- CH2_PWM[CH2 PWM]       CH2_PWM --- 1       1 --- 2       2 --- 3       3 --- Q2[Q2 DMN62D0U-7]       Q2 --- 2       2 --- R22[100k]       R22 --- 2       2 --- GND     </pre>
FLT1 (TP12)	<p>The FLT1 test point can be used to monitor if a fault has occurrence in the TPS92519-Q1 on channel 1. When a fault occurs, FLT1 voltage level goes low. Read Faults and Diagnostics section of the <a href="#">TPS92519-Q1 4.5-V to 65-V Dual 2-A Synchronous Buck LED Driver Data Sheet</a> to determine which faults trigger the FLT<sub>x</sub> indication.</p>
FLT2 (TP5)	<p>The FLT2 test point can be used to monitor if a fault has occurrence in the TPS92519-Q1 on channel 2. When a fault occurs, FLT2 voltage level goes low. Read Faults and Diagnostics section of the <a href="#">TPS92519-Q1 4.5-V to 65-V Dual 2-A Synchronous Buck LED Driver Data Sheet</a> to determine which faults trigger the FLT<sub>x</sub> indication.</p>
IADJ1 (TP10)	<p>The TPS92519's LED current are controlled by applying a voltage to the IADJ1 test point. J1 can be used to disable the output by shorting the IADJ1 pin to ground. 140 mV to 2.45 V for VIADJ gives 122 mA to 2134 mA of output current. If using an external supply to IADJ1 pin then do not short the supply by loading J1.</p>  <p>PSIL169A- /M-169</p> <p>Circuit diagram for IADJ1:</p> <pre>     graph LR       IADJ1((TP10)) --- IADJ1[23 IADJ1]       IADJ1 --- R14[140mV]       R14 --- R15[2.45V]       R15 --- R16[100k]       R16 --- R17[100k]       R17 --- SW1[SW1]       SW1 --- L1[L1]       L1 --- GND       GND --- IADJ1       IADJ1 --- IADJ1[23 IADJ1]       IADJ1 --- R14[140mV]       R14 --- R15[2.45V]       R15 --- R16[100k]       R16 --- R17[100k]       R17 --- SW1[SW1]       SW1 --- L1[L1]       L1 --- GND       GND --- IADJ1     </pre> 
IADJ2 (TP4)	<p>The TPS92519's LED current is controlled by applying a voltage to the IADJ2 test point. J2 can be used to disable the output by shorting the IADJ2 pin to ground. 140 mV to 2.45 V for VIADJ gives 122 mA to 2134 mA of output current. If using an external supply to IADJ2 pin then do not short the supply by loading J2.</p>  <p>PSIL169A- /M-169</p> <p>Circuit diagram for IADJ2:</p> <pre>     graph LR       IADJ2((TP4)) --- IADJ2[32 CS2 N]       IADJ2 --- R7[0.082]       R7 --- R14[140mV]       R14 --- R15[2.45V]       R15 --- R16[100k]       R16 --- R17[100k]       R17 --- SW2[SW2]       SW2 --- L2[68μH]       L2 --- SW2[SW2]       SW2 --- IADJ2[32 CS2 N]       IADJ2 --- IADJ2[32 CS2 N]       IADJ2 --- R7[0.082]       R7 --- R14[140mV]       R14 --- R15[2.45V]       R15 --- R16[100k]       R16 --- R17[100k]       R17 --- SW2[SW2]       SW2 --- L2[68μH]       L2 --- SW2[SW2]       SW2 --- IADJ2[32 CS2 N]     </pre> 

**Table 3-2. Test Points (continued)**

Test Point	Description
EN (TP28)	<p>The EN test point is connected to the TPS92519 to either enable or disable the device. By default, the test point is turned on. A jumper can be applied to J5 to disable the part or the EN test point can be pulled low to disable the device.</p>  

### 3.4 Electrical Performance Specifications

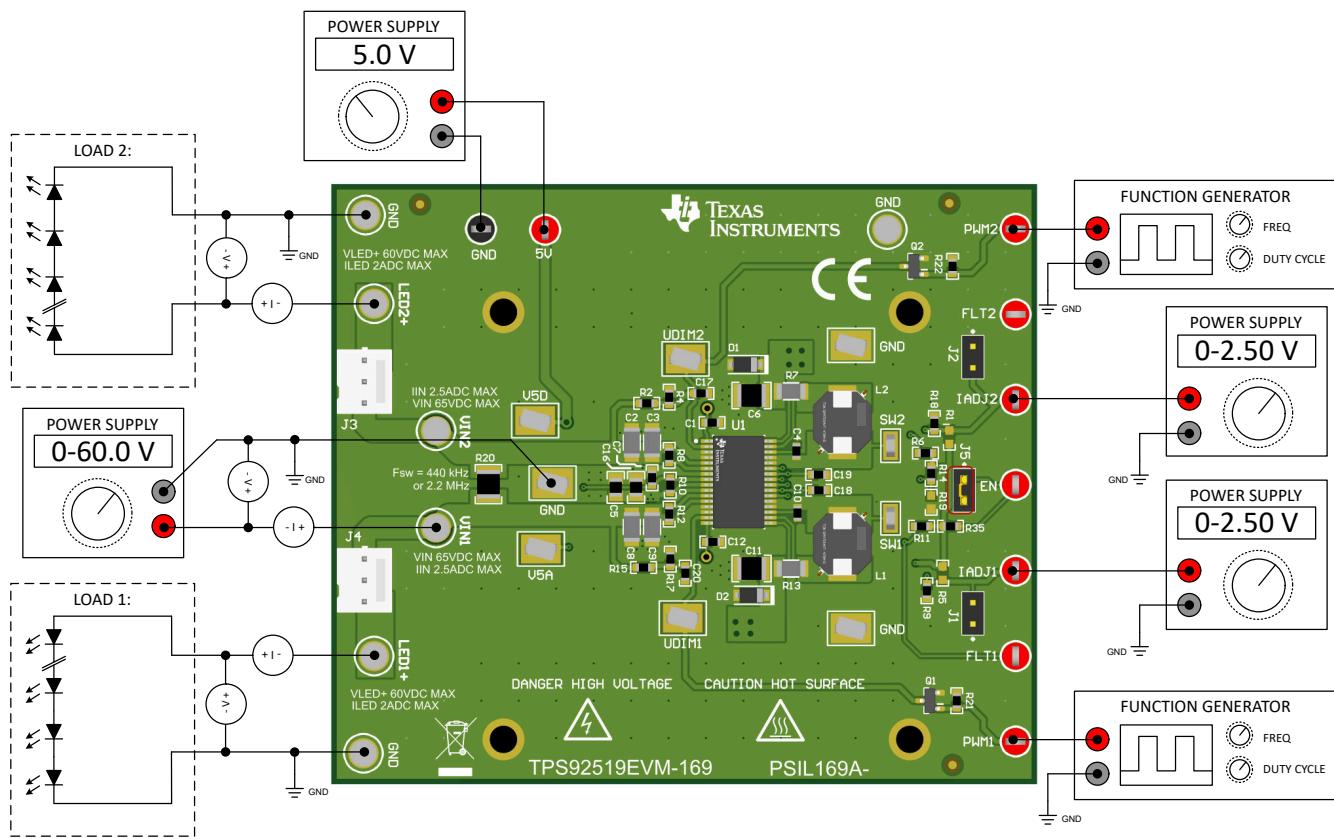

Table 3-3 lists the EVM electrical performance specifications.

**Table 3-3. TPS92519EVM Performance Specifications**

Parameter	Description	Min	Typ	Max	Units
<b>Input Characteristics</b>					
Voltage, $V_{IN}$	This assumes UDIM is attached to V5D or any voltage above $V_{UDIMx(DO)}$ rising maximum of 2.52 V. The TPS92519EVM-169 has UVLO of 40-V rising and 20-V falling.	4.5	50	60	V
Maximum Input Current, $I_{IN}$				4.5	A
<b>Output Characteristics</b>					
Output Voltage, $V_{OUT}$	Maximum voltage configured by the output voltage divider and programmable by the SPI	$V_{IN}$		60	V
Maximum Output Current, $I_{OUT}$	Total output current per channel			2.0	A
Maximum Output Power, $P_{OUT}$	Total output power			120	W
<b>Systems Characteristics</b>					
Switching frequency	$V_{FSET} > 1.8$ V, Channel 1		384		kHz
	$V_{FSET} > 1.8$ V, Channel 2		435		
	$V_{FSET} < 0.8$ V, Channel 1		2.04		MHz
	$V_{FSET} < 0.8$ V, Channel 2		2.14		
Peak efficiency				96	%
Operating temperature	NOTE: Max temperature range is based on total power dissipation.	-40	25	125	°C

## 4 Test Setup

The TPS92519EVM-169 can be connected a variety of different ways. [Figure 4-1](#) shows a typical test setup.

**Figure 4-1. TPS92519EVM-169 Typical Test Setup**

### 4.1 Input Supplies and LED Load Connections

The default configuration for this EVM is that both VIN1 and VIN2 are shorted together by R20. This configuration allows for a simpler connection. However, if two separate supplies are desired, then R20 must be removed and individual supplies must be connected either by the VIN1 (TP14) and VIN2 (TP6) turrets or through J3 and J4 connectors.

The LEDs are to be connected, as show in [Figure 4-2](#), where the anode of the LEDs are to be connected to LED1+ and LED2+ test points or through J3 or J4.

V5D and V5A are tied together through R10. An external 5-V supply must be attached to the 5-V test point (TP7) to supply the TPS92519.

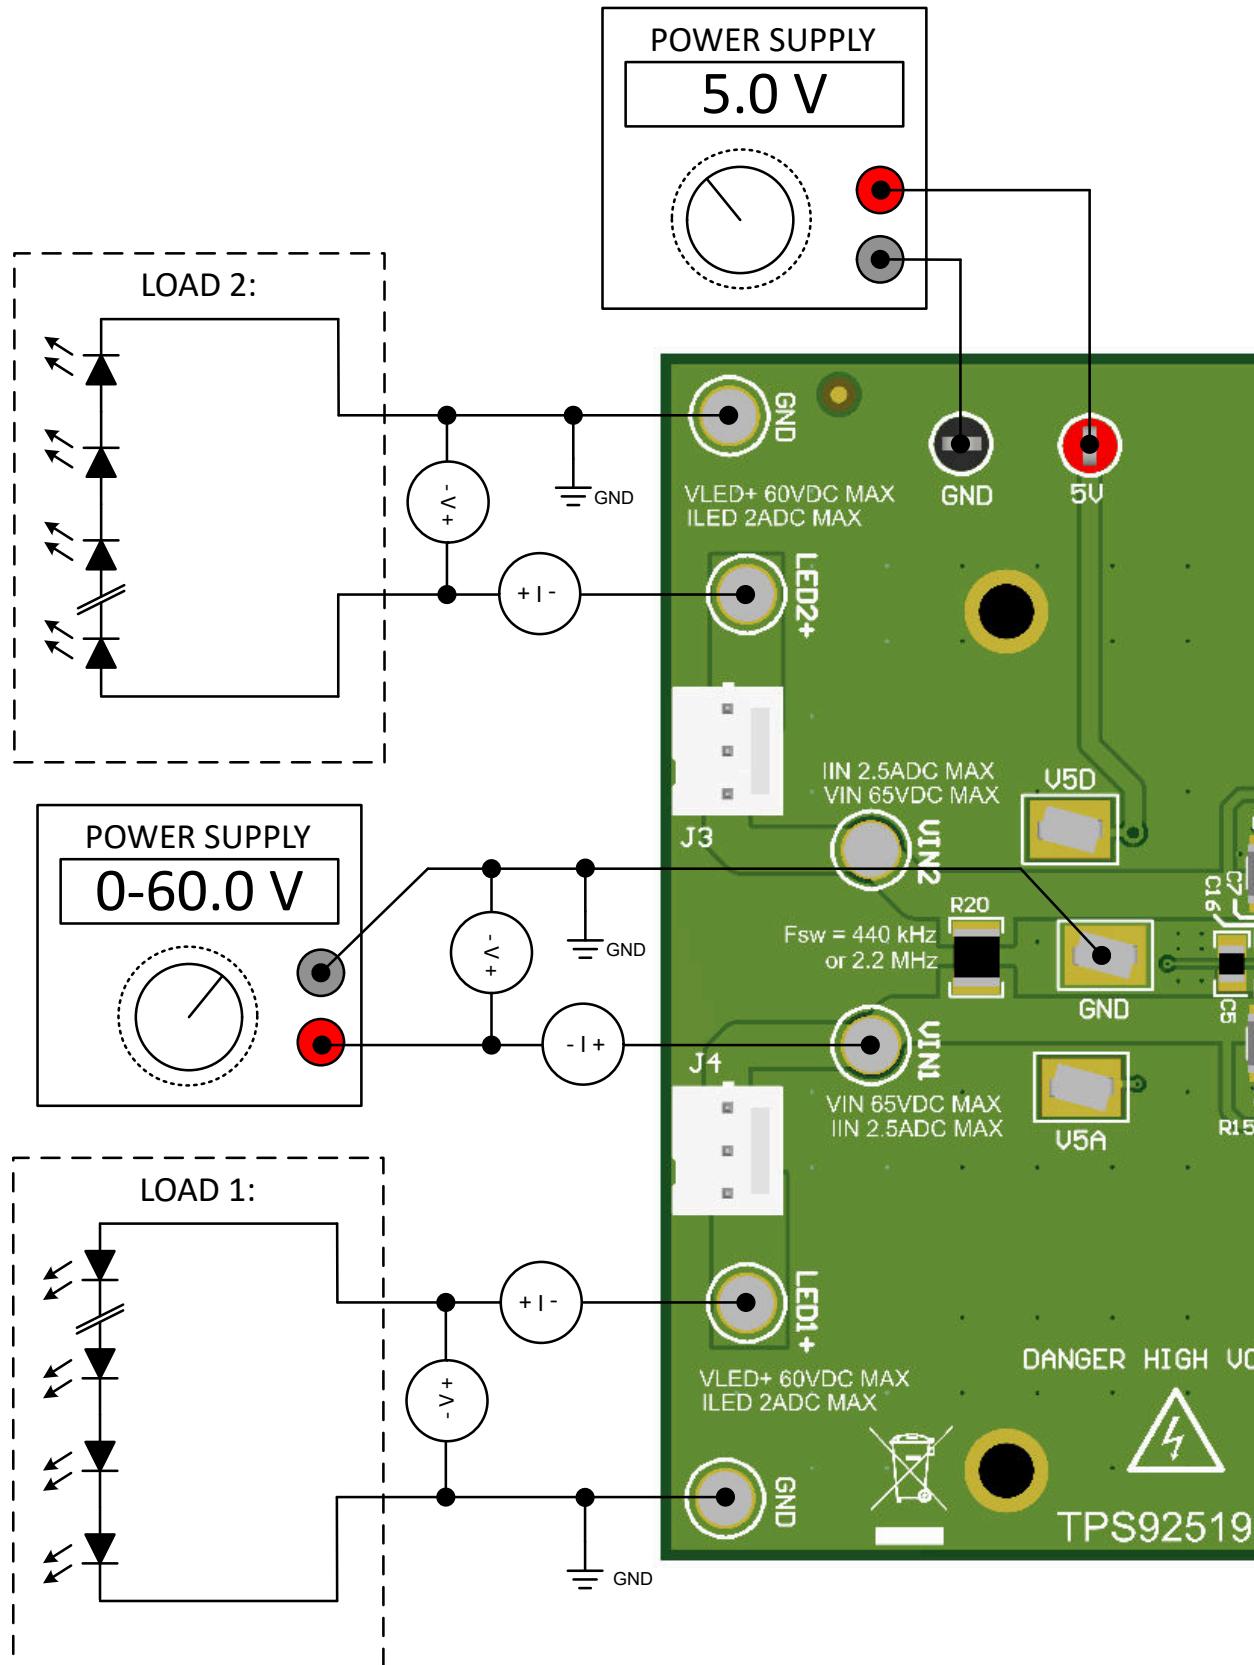

Figure 4-2. V5D, VINx and LEDx Connections

## 4.2 Switching Frequency Selection

The TPS92519EVM-169 is by default setup for 384 kHz for channel 1 and 438 kHz for channel 2. If 2/2.1-MHz operation is desired, then both the inductors (L1 and L2) must be changed to 10 uH and FSET must be pulled to ground by removing R14 and inserting R19.

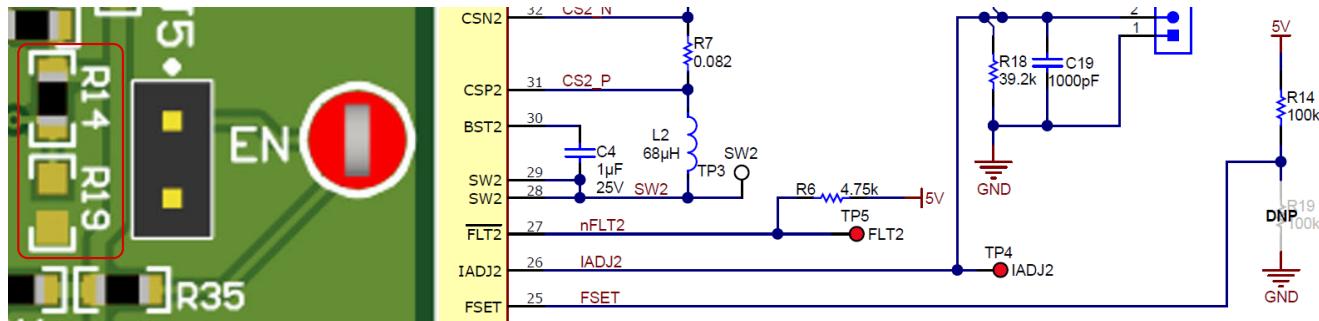

Figure 4-3. FSET Resistors and Circuit

## 4.3 Analog Dimming Using IADJx

Analog Dimming for each channel is controlled by IADJ1 (TP10) and IADJ2 (TP4) test points or by using the resistor divider attached to 5 V. The voltage on the IADJx pin sets the regulated LED current by the following equation.

$$I_{LEDx} = \frac{V_{IADJx}}{14 \times R_{CSx}} \quad (1)$$

By default,  $R_{FB2x}$  is not loaded and therefore needs an external power supply to set the  $V_{IADJx}$  setpoint. J1 and J2 are not loaded by default.

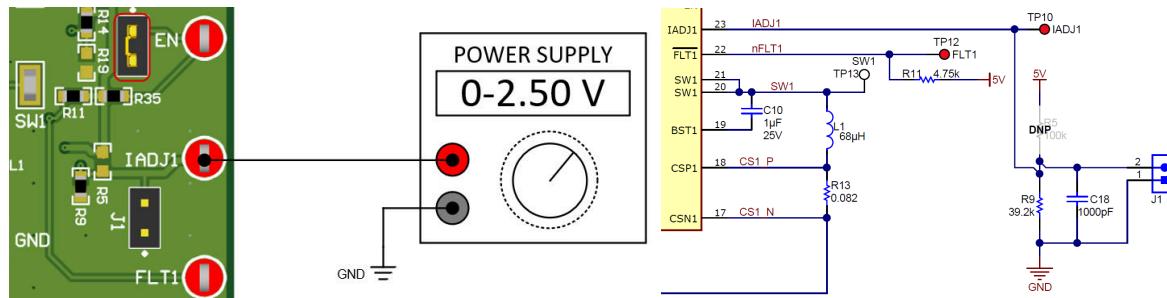

Figure 4-4. Channel 1 IADJ Using External Supply

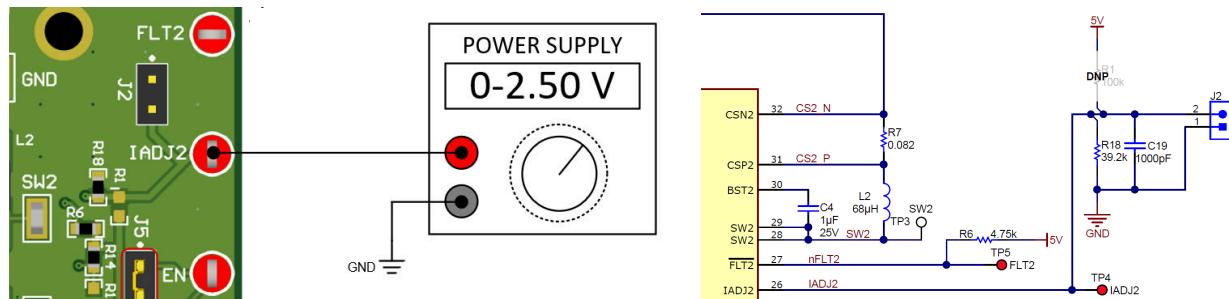

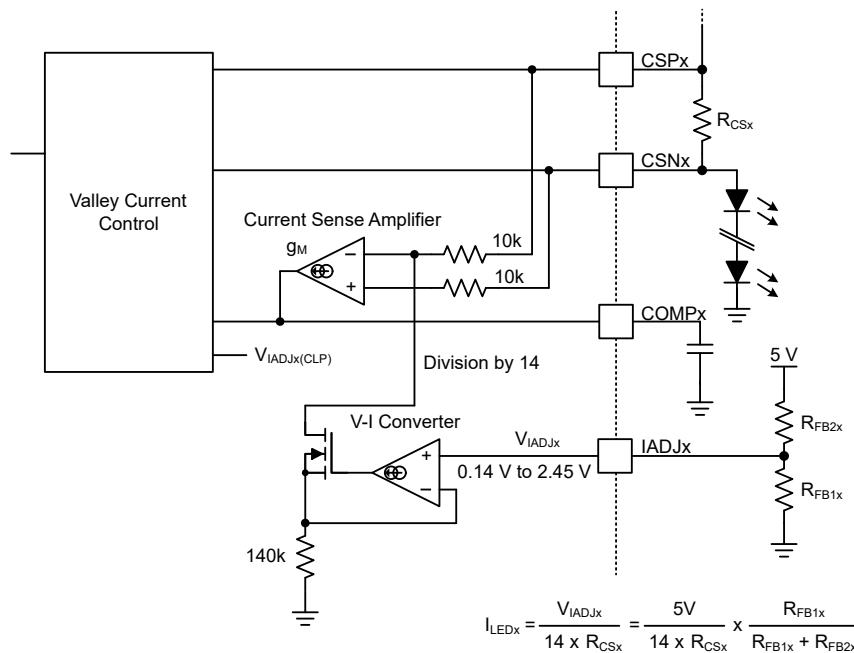

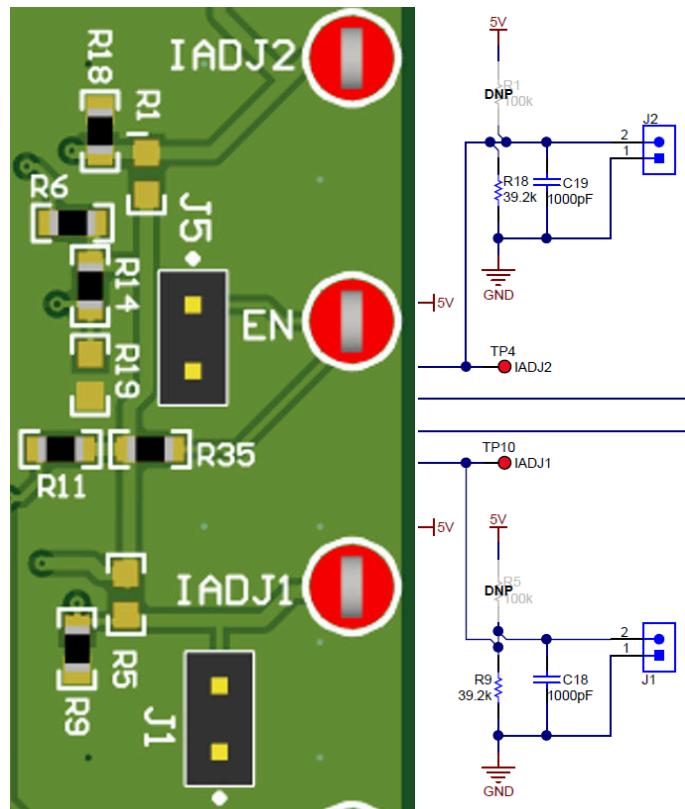

Figure 4-5. Channel 2 IADJ Using External Supply

There is a placeholder for resistor divider and  $R_{FB2x}$  has to be calculated for the desired  $I_{LEDx}$ . See [Figure 4-6](#) for the circuit diagram and equation. R1 controls the voltage for IADJ2 and R5 controls the voltage for IAdJ1. See [Figure 4-7](#).

**Figure 4-6. Setting IADJx Using On-Board Resistor Divider**

**Figure 4-7. IADJ Using Resistor Divider**

#### 4.4 PWM Dimming Using UDIMx and PWM Test Points

PWM dimming can be achieved by either using the PWM1 and PWM2 test points or by the UDIM1 and UDIM2 test points. UDIM have resistor dividers that setup the UVLO from VIN (Figure 4-8). The voltage is low enough that you can connect the function generator directly. If UDIM was pulled to VIN by a resistor then the PWM test points should be used (Figure 4-9). The PWMx signal inverts the signal to UDIMx.

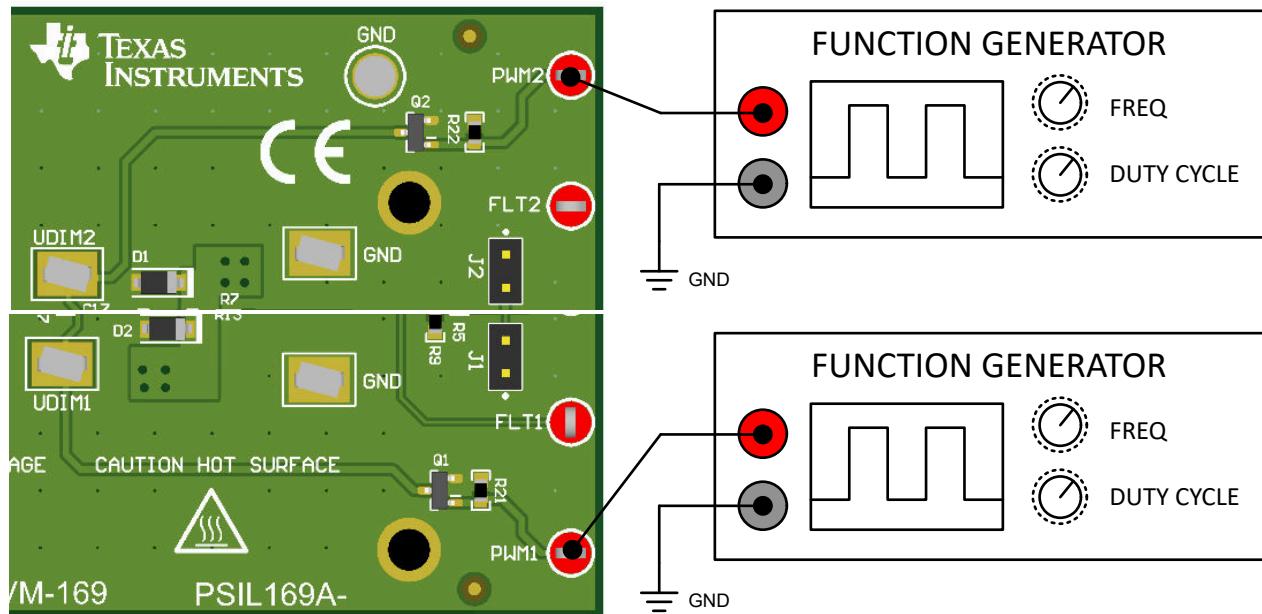

Figure 4-8. PWM Dimming Using PWM1 and PWM2

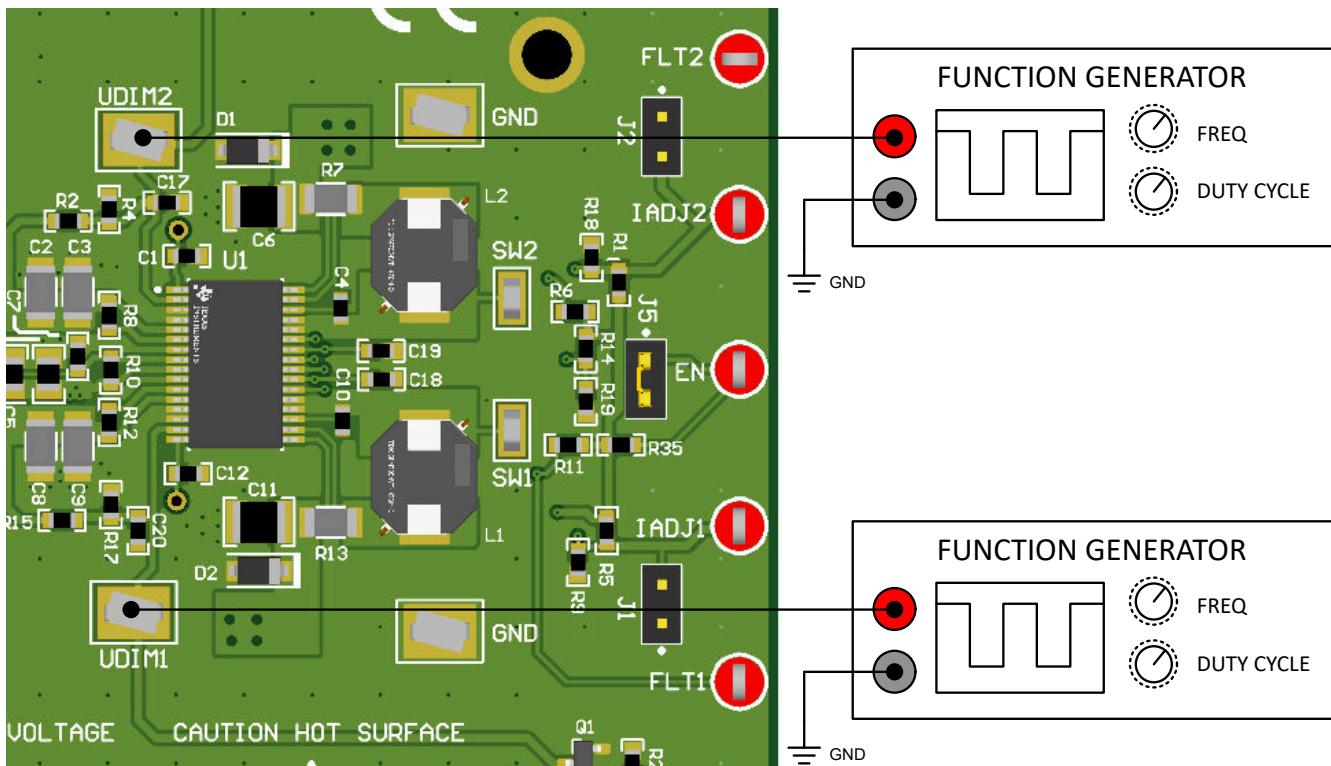

Figure 4-9. PWM Dimming Using UDIM1 and UDIM2

## 5 Performance Data and Typical Characteristic Curves

Figure 5-1 through Figure 5-9 present typical performance curves for TPS92519EVM-169.

### 5.1 Efficiency

## 6 Schematic

Figure 6-1 illustrates the EVM schematic.

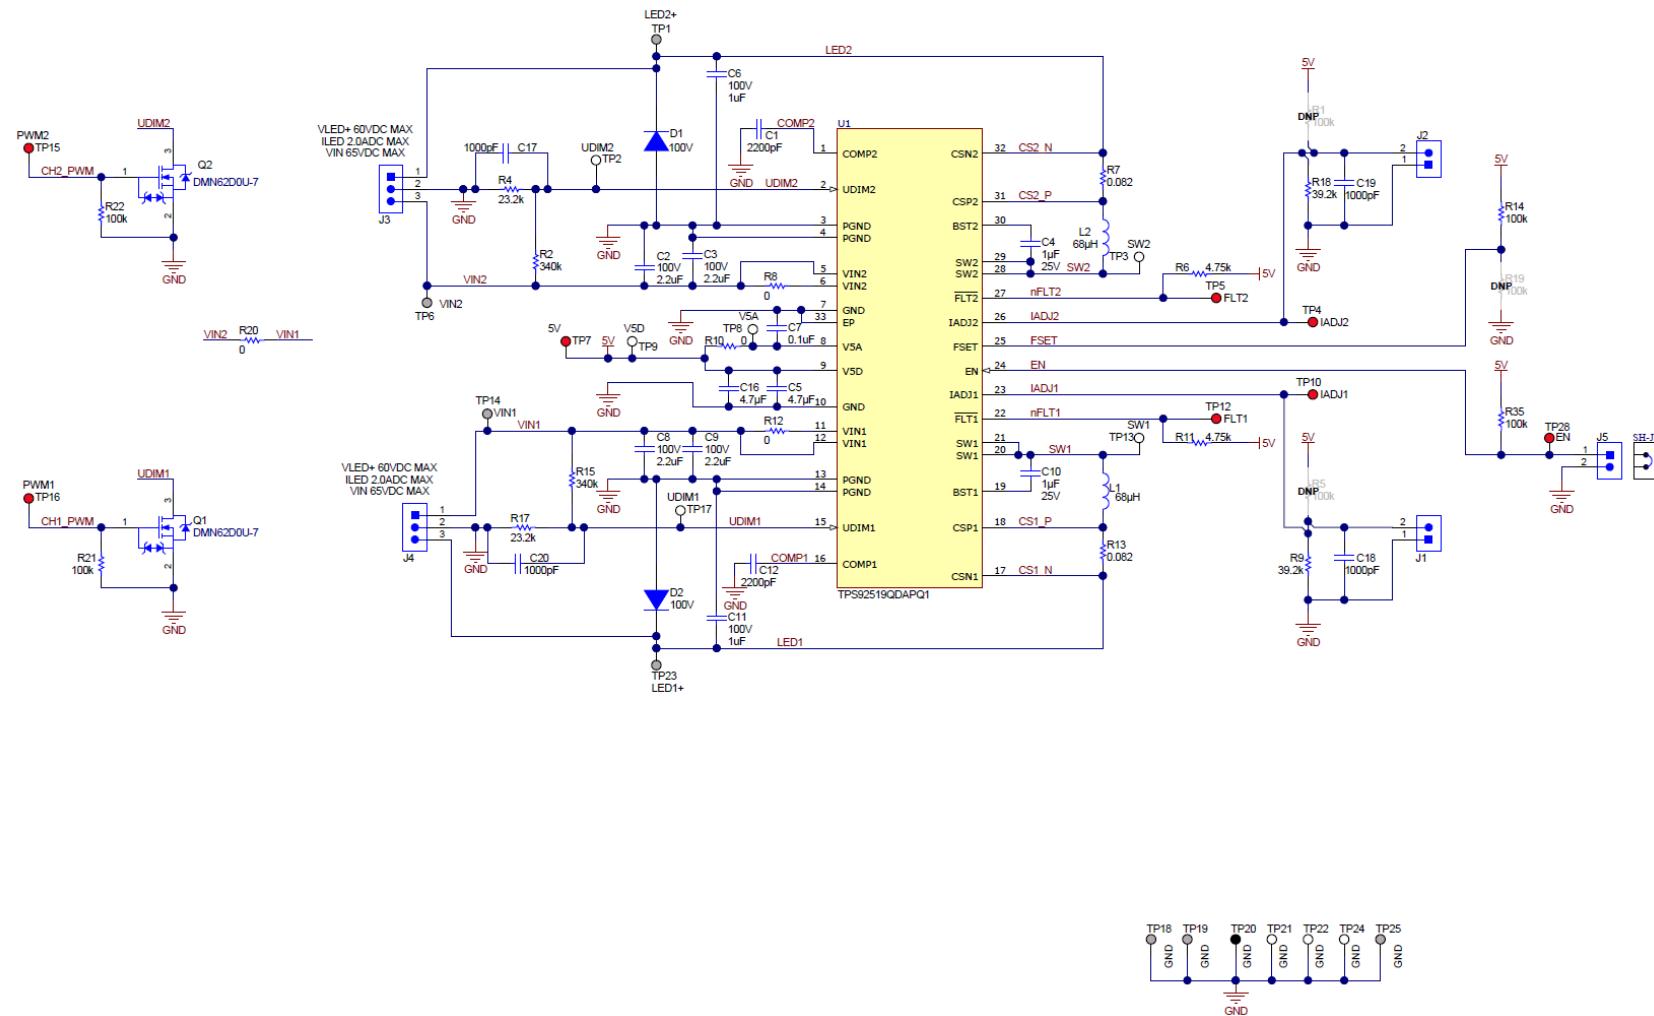

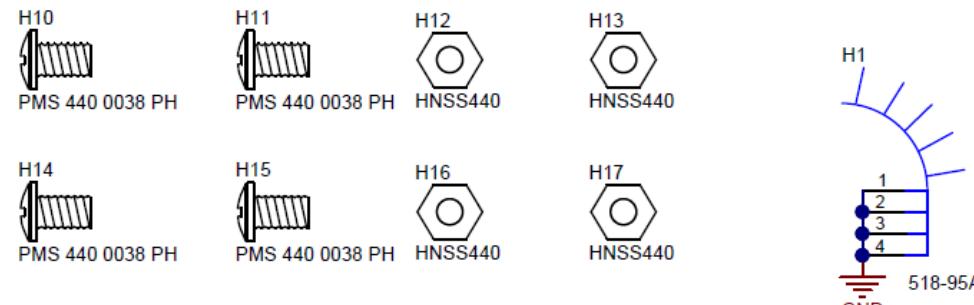

Figure 6-1. TPS92519EVM-169 Schematic Page 1

ASSEMBLY NOTE for H9:

H9-can be cut to make 20 units.Cut Sil-Pad to fit heat sink. Use dimensions shown in the PCB, can be slightly oversized. Sil-Pad fits between the PCB (bottom side) and the Heat sink.The heat sink is bolted to the PCB with H1, H2, H5, H6, H3, H4, H7, and H8. Screws are placed through the board from the top side.

## 9 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision * (July 2021) to Revision A (November 2021)	Page
• Updated the tables, figures, and references to the TPS92519EVM-169 board, which changed from Rev E1 to Rev A.....	1

## **IMPORTANT NOTICE AND DISCLAIMER**

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATA SHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#) or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
