

Test Report: PMP30491 Tiny SEPIC Reference Design With 12-V/ 2.5-A Output

Description

This reference design uses the LM5122 device. The output voltage is 12 V and has a 3-A_{max} output current. The input voltage range is from 6 V to 12 V. The circuit is designed to withstand input voltages as low as 5 V (automotive cranking) and load dump up to 36 V. Switching frequency (F_{sw}) has been measured for this board at 210 kHz.

An IMPORTANT NOTICE at the end of this TI reference design addresses authorized use, intellectual property matters and other important disclaimers and information.

1 Test Prerequisites

1.1 Voltage and Current Requirements

Table 1. Voltage and Current Requirements

PARAMETER	SPECIFICATIONS
V_{IN}	6 V - 18 V
V_{OUT}	12 V
I_{OUT}	2.5 A _{cont} / 3 A _{max}

1.2 Considerations

The switching frequency is approximately 210 kHz. With an output current of 1.13 A, the circuit switches on at 5.99 V and switches off at 4.78 V. All measurements were done using the MODE diode emulation that improves light load efficiency (LLE).

The output current was adjusted to a full load of 3 A with the resistor as the load.

2.3 Thermal Images

2.3.1 6-V Input Voltage

Figure 4 shows the thermal image at 6-V input voltage and 3-A output current. This enables short-term cranking of less than 60 seconds. This measurement was taken after 30 minutes of operation.

3.4.2 12-V Input Voltage

Figure 20. Bode Plot at 12-V Input Voltage

3.5 Load Transients

Electronic load was used in this measurement. The load switches from 1.5 A to 3 A with a frequency of 100 Hz.

3.5.1 6-V Input Voltage

Figure 21. 1.5-A to 3-A Load Transient at 6-V Input Voltage

- Ch1 (blue): output voltage (AC) = 100 mV/div, 10-kHz bandwidth
- Ch2 (red): output current = 1 A/div, 20-MHz bandwidth
- 2 ms/div

3.5.2 12-V Input Voltage

Figure 22. 1.5-A to 3-A Load Transient at 12-V Input Voltage

- Ch1 (blue): output voltage (AC) = 100 mV/div, 10-kHz bandwidth
- Ch2 (red): output current = 1 A/div, 20-MHz bandwidth
- 2 ms/div

3.6 Start-up Sequence

3.6.1 6-V Input Voltage

Figure 23. Start-up With 6-V Input Voltage

- Ch1 (violet): input voltage = 2 V/div
- Ch2 (green): output voltage = 5 V/div
- 4 ms/div

3.6.2 12-V Input Voltage

Figure 24. Start-up With 12-V Input Voltage

- Ch1 (violet): input voltage = 5 V/div
- Ch2 (green): output voltage = 5 V/div
- 4 ms/div

3.7 Shut-down Sequence

The power supply was disconnected in the following measurements. The waveforms were done with a 20-MHz bandwidth setting.

3.7.1 6-V Input Voltage

Figure 25. Shut-down With 6-V Input Voltage

- Ch1 (violet): input voltage = 2 V/div
- Ch2 (green): output voltage = 5 V/div
- 2 ms/div

3.7.2 12-V Input Voltage

Figure 26. Shut-down With 12-V Input Voltage

- Ch1 (violet): input voltage = 5 V/div
- Ch2 (green): output voltage = 5 V/div
- 2 ms/div
