Operating Environments for PCM2912A Applications

Takeshi Nakamori

ABSTRACT

This article describes updated information about operating environments for which proper operation of the PCM2912A has been tested by TI.

1 Operating Environment

For appropriate operation, one of these operating systems must be running on a host PC and equipped with a USB port certified by the manufacturer. If these condition are met, the operation of the PCM2912A does not depend on the CPU operating speed. Texas Instruments has tested and confirmed the listed operating systems. The PCM2912A may work with other PCs and operating systems also, but proper operation has not been tested and cannot be assured by TI.

2 Operating Systems

- Microsoft™ Windows™ XP Home/Professional Japanese/English edition (For Windows XP, use the latest version of the USB audio driver available from the Windows Internet site, or apply Service Pack 1 or later. See the Q310507 white paper available from Microsoft.)
- Microsoft Windows 7 32-bit / 64-bit
- Microsoft Windows 10 32-bit / 64-bit
- Apple Computer Mac OS™ X 10.0 or later English edition
- Apple Computer Mac OS X 10.1 or later Japanese edition SP (For the Mac OS X 10.0 Japanese edition, plug and play does not work appropriately for USB audio devices.)

3 Related Documentation

- PCM2912A Data Sheet (SLES230)
- DEM-PCM2912A EVM User’s Guide (SBAU141)

4 Trademarks

Mac OS is a trademark of Apple Computer.
Intel is a trademark of Intel Corporation.
Microsoft, Windows, Windows Vista are trademarks of Microsoft Corporation.
5 A PC-AT Compatible Computer Running a Required OS
   • Motherboard using Intel™ i915 chipset (using ICH6/R USB controller in the chipset)
   • Motherboard using Intel i925 chipset (using ICH6/R USB controller in the chipset)
   • Motherboard using Intel 915GM Express chipset (using the USB controller in the chipset)
   • Motherboard using Intel 945GM chipset (using the USB controller in the chipset)
   • Motherboard using Intel Q965 Express chipset (using the USB controller in the chipset)

NOTE: The PCM2912A has been acknowledged in a USB compliance test. However, the acknowledgment is for the PCM2912A device only, and does not apply to the customer’s application system using the PCM2912A. If the customer’s application system requires a USB certification, this certification must be applied for separately by the customer, using the appropriate category USB-IF instructions. The testing environment is defined by the USB-IF and it can not be chosen by an applicant.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have not been so designated is solely at the Buyer’s risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
