

DS92LV010A Bus LVDS 3.3/5.0V Single Transceiver

Check for Samples: [DS92LV010A](#)

FEATURES

- Bus LVDS Signaling (BLVDS)
- Designed for Double Termination Applications
- Balanced Output Impedance
- Lite Bus Loading 5pF Typical
- Glitch Free Power Up/Down (Driver Disabled)
- 3.3V or 5.0V Operation
- $\pm 1V$ Common Mode Range
- $\pm 100mV$ Receiver Sensitivity
- High Signaling Rate Capability (Above 100 Mbps)
- Low Power CMOS Design
- Product Offered in 8 Lead SOIC Package
- Industrial Temperature Range Operation

DESCRIPTION

The DS92LV010A is one in a series of transceivers designed specifically for the high speed, low power proprietary bus backplane interfaces. The device operates from a single 3.3V or 5.0V power supply and includes one differential line driver and one receiver. To minimize bus loading the driver outputs and receiver inputs are internally connected. The logic interface provides maximum flexibility as 4 separate lines are provided (D_{IN}, DE, \overline{RE} , and R_{OUT}). The device also features flow through which allows easy PCB routing for short stubs between the bus pins and the connector. The driver has 10 mA drive capability, allowing it to drive heavily loaded backplanes, with impedance as low as 27 Ohms.

The driver translates between TTL levels (single-ended) to Low Voltage Differential Signaling levels. This allows for high speed operation, while consuming minimal power with reduced EMI. In addition the differential signaling provides common mode noise rejection of $\pm 1V$.

The receiver threshold is $\pm 100mV$ over a $\pm 1V$ common mode range and translates the low voltage differential levels to standard (CMOS/TTL) levels.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

ABSOLUTE MAXIMUM RATINGS ⁽¹⁾⁽²⁾⁽³⁾

Supply Voltage (V_{CC})		6.0V
Enable Input Voltage (DE, \overline{RE})		-0.3V to ($V_{CC} + 0.3V$)
Driver Input Voltage (DIN)		-0.3V to ($V_{CC} + 0.3V$)
Receiver Output Voltage (R_{OUT})		-0.3V to ($V_{CC} + 0.3V$)
Bus Pin Voltage (DO/RI±)		-0.3V to + 3.9V
Driver Short Circuit Current		Continuous
ESD (HBM 1.5 k Ω , 100 pF)		>2.0 kV
Maximum Package Power Dissipation at 25°C	SOIC	1025 mW
	Derate SOIC Package	8.2 mW/°C
Junction Temperature		+150°C
Storage Temperature Range		-65°C to +150°C
Lead Temperature (Soldering, 4 sec.)		260°C

- (1) All currents into device pins are positive; all currents out of device pins are negative. All voltages are referenced to device ground except V_{OD} , V_{ID} , V_{TH} and V_{TL} unless otherwise specified.
- (2) Absolute Maximum Ratings are those beyond which the safety of the device cannot be ensured. They are not meant to imply that the device should be operated at these limits. The table of “[Electrical Characteristics](#)” provides conditions for actual device operation.
- (3) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.

APPLICATION INFORMATION

There are a few common practices which should be implied when designing PCB for BLVDS signaling. Recommended practices are:

- Use at least 4 layer PCB board (BLVDS signals, ground, power and TTL signals).
- Keep drivers and receivers as close to the (BLVDS port side) connector as possible.
- Bypass each BLVDS device and also use distributed bulk capacitance. Surface mount capacitors placed close to power and ground pins work best. Two or three multi-layer ceramic (MLC) surface mount capacitors (0.1 μ F, and 0.01 μ F in parallel should be used between each V_{CC} and ground. The capacitors should be as close as possible to the V_{CC} pin.
- Use the termination resistor which best matches the differential impedance of your transmission line.
- Leave unused LVDS receiver inputs open (floating)

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
