

## 2.5-V 460-kbps RS-232 TRANSCEIVER WITH $\pm 15$ -kV ESD PROTECTION

Check for Samples: [MAX3318](#)

### FEATURES

- **ESD Protection for RS-232 I/O Pins**
  - $\pm 15$  kV (Human-Body Model)
  - $\pm 8$  kV (IEC 61000-4-2, Contact Discharge)
  - $\pm 8$  kV (IEC 61000-4-2, Air-Gap Discharge)
- **300- $\mu$ A Operating Supply Current**
- **1- $\mu$ A Low-Power Standby (With Receivers Active) Mode**
- **Designed to Transmit at a Data Rate of 460 kbps**
- **Auto-Power-Down Plus Option Features Flexible Power-Saving Mode**
- **Operates From a Single 2.25-V to 3-V  $V_{CC}$  Supply**

### APPLICATIONS

- **Battery-Powered Systems**
- **PDA's**
- **Cellular Phones**
- **Notebooks**
- **Hand-Held Equipment**
- **Pagers**

### DESCRIPTION

The MAX3318 is a dual-driver, dual-receiver, RS-232 compatible transceiver. The device features auto-power-down plus and enhanced electrostatic discharge (ESD) protection integrated into the chip. Driver output and receiver input are protected to  $\pm 8$  kV using the IEC 61000-4-2 Air-Gap Discharge method,  $\pm 8$  kV using the IEC 61000-4-2 Contact Discharge method, and  $\pm 15$  kV using the Human-Body Model (HBM).

The device operates at a data rate of 460 kbps. The transceiver has a proprietary low-dropout driver output stage enabling RS-232-compatible operation from a 2.25-V to 3-V supply with a dual charge pump. The charge pump requires only four 0.1- $\mu$ F capacitors and features a logic-level output (READY) that asserts when the charge pump is regulating and the device is ready to begin transmitting.

The MAX3318 achieves a 1- $\mu$ A supply current using the auto-power-down feature. This device automatically enters a low-power power-down mode when the RS-232 cable is disconnected or the drivers of the connected peripherals are inactive for more than 30 s. The device turns on again when it senses a valid transition at any driver or receiver input. Auto power down saves power without changes to the existing BIOS or operating system.

This device is available in two space-saving packages: 20-pin SSOP and 20-pin TSSOP.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

## DETAILED DESCRIPTION

Flexible control options for power management are featured when the serial port and driver inputs are inactive. The auto-power-down plus feature functions when FORCEON is low and FORCEOFF is high. During this mode of operation, if the device does not sense valid signal transitions on all receiver and driver inputs for approximately 30 s, the built-in charge pump and drivers are powered down, reducing the supply current to 1  $\mu$ A. By disconnecting the serial port or placing the peripheral drivers off, auto-power-down plus can be disabled when FORCEON and FORCEOFF are high. With auto-power-down plus enabled, the device activates automatically when a valid signal is applied to any receiver or driver input. INVALID is high (valid data) if any receiver input voltage is greater than 2.7 V or less than -2.7 V, or has been between -0.3 V and 0.3 V for less than 30  $\mu$ s (typical number). INVALID is low (invalid data) if all receiver input voltage are between -0.3 V and 0.3 V for more than 30  $\mu$ s (typical number).

**FUNCTION TABLE<sup>(1)</sup>**

INPUT CONDITIONS				OUTPUT STATES				OPERATING MODE
FORCEON	FORCEOFF	RECEIVER OR DRIVER EDGE WITHIN 30 s	VALID RS-232 LEVEL PRESENT AT RECEIVER	DRIVER	RECEIVER	INVALID	READY	
<b>Auto-Power-Down Plus Conditions</b>								
H	H	No	No	Active	Active	L	H	Normal operation, auto-power-down plus disabled
H	H	No	Yes	Active	Active	H	H	Normal operation, auto-power-down plus disabled
L	H	Yes	No	Active	Active	L	H	Normal operation, auto-power-down plus enabled
L	H	Yes	Yes	Active	Active	H	H	Normal operation, auto-power-down plus enabled
L	H	No	No	Z	Active	L	L	Power down, auto-power-down plus enabled
L	H	No	Yes	Z	Active	H	L	Power down, auto-power-down plus enabled
X	L	X	No	Z	Active	L	L	Manual power down
X	L	X	Yes	Z	Active	H	L	Manual power down
<b>Auto-Power-Down Conditions</b>								
INVALID	INVALID	X	No	Z	Active	L	L	Power down, auto power down enabled
INVALID	INVALID	X	Yes	Active	Active	H	H	Normal operation, auto power down enabled

(1) H = high level, L = low level, X = irrelevant, Z = high impedance

**LOGIC DIAGRAM (POSITIVE LOGIC)**

**TERMINAL FUNCTIONS**

TERMINAL		DESCRIPTION
NAME	NO.	
C1+	2	Positive voltage-doubler charge-pump capacitor
C1–	4	Negative voltage-doubler charge-pump capacitor
C2+	5	Positive inverting charge-pump capacitor
C2–	6	Negative inverting charge-pump capacitor
DIN	12, 13	CMOS driver inputs
DOUT	8, 17	RS-232 driver outputs
$\overline{\text{FORCEOFF}}$	20	Force-off input, active low. Drive low to power down transmitters and charge pump. This overrides auto power down and FORCEON (see Function Table).
FORCEON	14	Force-on input, active high. Drive high to override auto power down, keeping transmitters on ( $\overline{\text{FORCEOFF}}$ must be high) (see Function Table).
GND	18	Ground
$\overline{\text{INVALID}}$	11	Valid signal detector output, active low. A logic high indicates that a valid RS-232 level is present on a receiver input.
READY	1	Ready to transmit output, active high. READY is enabled high when V– goes below –3.5 V and the device is ready to transmit.
RIN	9, 16	RS-232 receiver inputs
ROUT	10, 15	CMOS receiver outputs
V+	3	$2 \times V_{CC}$ generated by the charge pump
V–	7	$-2 \times V_{CC}$ generated by the charge pump
V <sub>CC</sub>	19	2.25-V to 3-V single-supply voltage

## Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V <sub>CC</sub> to GND		-0.3	6	V
V <sub>+</sub> to GND <sup>(2)</sup>		-0.3	7	V
V <sub>-</sub> to GND <sup>(2)</sup>		-7	0.3	V
V <sub>+</sub> +  V <sub>-</sub>   <sup>(2)</sup>			13	V
Input voltage	DIN, FORCEON, FORCEOFF to GND	-0.3	6	V
	RIN to GND		±25	
Output voltage	DOUT to GND		±13.2	V
	ROUT, INVALID, READY to GND	-0.3	V <sub>CC</sub> + 0.3	
Short-circuit duration	DOUT to GND		Continuous	
Continuous power dissipation (T <sub>A</sub> = 70°C)	16-pin SSOP (derate 7.14 mW/°C above 70°C)		571	mW
	20-pin SSOP (derate 8 mW/°C above 70°C)		640	
	20-pin TSSOP (derate 7 mW/°C above 70°C)		559	
Storage temperature range		-65	150	°C
Lead temperature (soldering, 10 s)			300	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) V<sub>+</sub> and V<sub>-</sub> can have maximum magnitudes of 7 V, but their absolute difference cannot exceed 13 V.

## Recommended Operating Conditions

See Figure 4

		MIN	NOM	MAX	UNIT	
Supply voltage		2.25	2.5	3	V	
V <sub>IH</sub>	Driver and control high-level input voltage	DIN, FORCEOFF, FORCEON V <sub>CC</sub> = 2.5 V to 3 V		0.7 × V <sub>CC</sub>	5.5	V
V <sub>IL</sub>	Driver and control low-level input voltage	DIN, FORCEOFF, FORCEON V <sub>CC</sub> = 2.5 V to 3 V		0	0.3 × V <sub>CC</sub>	V
V <sub>I</sub>	Receiver input voltage	-25		25	V	
T <sub>A</sub>	Operating free-air temperature	MAX3318C		0	70	°C
		MAX3318I		-40	85	

## Supply Current Section Electrical Characteristics

$V_{CC} = 2.25\text{ V to }3\text{ V}$ ,  $C1-C4 = 0.1\ \mu\text{F}$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
<b>DC Characteristics (<math>V_{CC} = 2.5\text{ V}</math>, <math>T_A = 25^\circ\text{C}</math>)</b>					
Auto-power-down plus supply current	FORCEON = GND, $\overline{\text{FORCEOFF}} = V_{CC}$ , All RIN and DIN idle		1	10	$\mu\text{A}$
Auto-power-down supply current	$\overline{\text{FORCEOFF}} = \text{GND}$		1	10	$\mu\text{A}$
Supply current	FORCEON = $\overline{\text{FORCEOFF}} = V_{CC}$ , No load		0.3	2	mA

(1) Typical values are at  $V_{CC} = 2.5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

## ESD Protection

PARAMETER	TEST CONDITIONS	TYP	UNIT
RIN, DOUT	Human-Body Model (HBM)	$\pm 15$	kV
	IEC 61000-4-2 Air-Gap Discharge method	$\pm 8$	
	IEC 61000-4-2 Contact Discharge method	$\pm 8$	

## Driver Section Electrical Characteristics

over recommended ranges of supply voltage and operating free-air temperature,

$V_{CC} = 2.25\text{ V to }3\text{ V}$ ,  $C1-C4 = 0.1\ \mu\text{F}$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$  (unless otherwise noted) (see [Figure 4](#))

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
Driver input hysteresis			0.3		V
Input leakage current	FORCEON, DIN, $\overline{\text{FORCEOFF}}$		$\pm 0.01$	$\pm 1$	$\mu\text{A}$
Output voltage swing	All driver outputs loaded with $3\text{ k}\Omega$ to ground	$\pm 3.7$	$\pm 4$		V
Output resistance	$V_{CC} = 0$ , Driver output = $\pm 2\text{ V}$	300	10M		$\Omega$
Output short-circuit current <sup>(2)</sup>			$\pm 25$	$\pm 60$	mA
Output leakage current	$V_{CC} = 0$ or $2.25\text{ V to }3\text{ V}$ , $V_{OUT} = \pm 12\text{ V}$ , Drivers disabled			$\pm 25$	$\mu\text{A}$

(1) Typical values are at  $V_{CC} = 2.5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

(2) Short-circuit durations should be controlled to prevent exceeding the device absolute power dissipation ratings, and not more than one output should be shorted at a time.

## Driver Section Switching Characteristics

over recommended ranges of supply voltage and operating free-air temperature,

$V_{CC} = 2.25\text{ V to }3\text{ V}$ ,  $C1-C4 = 0.1\ \mu\text{F}$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$  (unless otherwise noted) (see [Figure 1](#))

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
Maximum data rate	$R_L = 3\text{ k}\Omega$ , $C_L = 1000\text{ pF}$ , One transmitter switching	460			kbps
$ t_{PHL} - t_{PLH} $ Driver skew <sup>(2)</sup>			100		ns
Transition-region slew rate	$V_{CC} = 2.5\text{ V}$ , $T_A = 25^\circ\text{C}$ , $R_L = 3\text{ k}\Omega$ to $7\text{ k}\Omega$ , Measured from $3\text{ V to }-3\text{ V}$ or $-3\text{ V to }3\text{ V}$ , $C_L = 150\text{ pF to }2500\text{ pF}$	4		30	V/ $\mu\text{s}$

(1) Typical values are at  $V_{CC} = 2.5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

(2) Pulse skew is defined as  $|t_{PLH} - t_{PHL}|$  of each channel of the same device.

## Receiver Section Electrical Characteristics

over recommended ranges of supply voltage and operating free-air temperature,  
 $V_{CC} = 2.25\text{ V to }3\text{ V}$ ,  $C1-C4 = 0.1\text{ }\mu\text{F}$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$  (unless otherwise noted) (see Figure 4)

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
Input voltage range		-25		25	V
Input threshold low	$T_A = 25^\circ\text{C}$			$0.3 \times V_{CC}$	V
Input threshold high	$T_A = 25^\circ\text{C}$	$0.7 \times V_{CC}$			V
Input hysteresis			0.3		V
Input resistance	$T_A = 25^\circ\text{C}$	3	5	7	k $\Omega$
Output leakage current			$\pm 0.05$	$\pm 10$	$\mu\text{A}$
Output voltage low	$I_{OUT} = 0.5\text{ mA}$			$0.1 \times V_{CC}$	V
Output voltage high	$I_{OUT} = -0.5\text{ mA}$	$0.9 \times V_{CC}$			V

(1) Typical values are at  $V_{CC} = 2.5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

## Receiver Section Switching Characteristics

over recommended ranges of supply voltage and operating free-air temperature,  
 $V_{CC} = 2.25\text{ V to }3\text{ V}$ ,  $C1-C4 = 0.1\text{ }\mu\text{F}$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$  (unless otherwise noted) (see Figure 4)

PARAMETER	TEST CONDITIONS	TYP <sup>(1)</sup>	UNIT
$t_{PHL}$	Receiver propagation delay RIN to ROUT, $C_L = 150\text{ pF}$	0.175	$\mu\text{s}$
$t_{PLH}$		0.175	
$ t_{PHL} - t_{PLH} $	Receiver skew <sup>(2)</sup>	50	ns

(1) Typical values are at  $V_{CC} = 2.5\text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

(2) Pulse skew is defined as  $|t_{PLH} - t_{PHL}|$  of each channel of the same device.

## Auto-Power-Down Plus Section Electrical Characteristics

over recommended ranges of supply voltage and operating free-air temperature,  
 $V_{CC} = 2.25\text{ V to }3\text{ V}$ ,  $C1-C4 = 0.1\text{ }\mu\text{F}$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$  (unless otherwise noted) (see Figure 4)

PARAMETER	TEST CONDITIONS	MIN	MAX	UNIT
Receiver input threshold to $\overline{\text{INVALID}}$ high	Positive threshold		2.7	V
	Negative threshold	-2.7		
Receiver input threshold $\overline{\text{INVALID}}$ low		-0.3	0.3	V
$\overline{\text{INVALID}}$ , READY voltage low	$I_{OUT} = 0.5\text{ mA}$		$0.1 \times V_{CC}$	V
$\overline{\text{INVALID}}$ , READY voltage high	$I_{OUT} = -0.5\text{ mA}$	$0.8 \times V_{CC}$		V

## Auto-Power-Down Plus Section Switching Characteristics

over recommended ranges of supply voltage and operating free-air temperature,  
 $V_{CC} = 2.25\text{ V to }3\text{ V}$ ,  $C1-C4 = 0.1\text{ }\mu\text{F}$ ,  $T_A = T_{MIN}$  to  $T_{MAX}$  (unless otherwise noted) (see Figure 4)

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>(1)</sup>	MAX	UNIT
$t_{INVH}$	Receiver positive or negative threshold to $\overline{\text{INVALID}}$ high $V_{CC} = 2.5\text{ V}$		1		$\mu\text{s}$
$t_{INVL}$	Receiver positive or negative threshold to $\overline{\text{INVALID}}$ low $V_{CC} = 2.5\text{ V}$		30		$\mu\text{s}$

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
