

# SN74LV8154 Dual 16-Bit Binary Counters With 3-State Output Registers

Check for Samples: [SN74LV8154](#)

## 1 Features

- Can Be Used as Two 16-Bit Counters or a Single 32-Bit Counter
- 8 bit counter read bus
- 2-V to 5.5-V  $V_{CC}$  Operation
- Maximum  $t_{pd}$  of 25 ns at 5 V (RCLK to Y)
- Typical  $V_{OLP}$  (Output Ground Bounce) < 0.7 V at  $V_{CC} = 5$  V,  $T_A = 25^\circ\text{C}$
- Typical  $V_{OHV}$  (Output  $V_{OH}$  Undershoot) > 4.4 V at  $V_{CC} = 5$  V,  $T_A = 25^\circ\text{C}$
- $I_{off}$  Supports Partial-Power-Down Mode Operation
- Latch-Up Performance Exceeds 250 mA Per JESD 17
- ESD Protection Exceeds JESD 22
  - 2000-V Human Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)

## 2 Applications

- Up Counters
- Dual Up Counters

## 3 Description

The SN74LV8154 device is a dual 16-bit binary counter with 3-state output registers, designed for 2-V to 5.5-V  $V_{CC}$  operation.

The counters have dedicated clock inputs. The counters share a clocked storage register to sample and save the counter contents. Both counters share an asynchronous clear input. The 32-bit storage register can be mapped on the output bus 8-bits at a time. Four bus reads are needed to access the contents of both stored counts. The two counters can be chained by connecting  $\overline{\text{CLKBEN}}$  to  $\text{RCOA}$ . All clocks are positive edge triggered. All other inputs are active low.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
SN74LV8154N	PDIP (20)	6.50 mm x 4.40 mm
SN74LV8154PW	TSSOP (20)	26.92 mm x 6.35 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

Y4	15	O	Data output bit 4
Y5	14	O	Data output bit 5
Y6	13	O	Data output bit 6
Y7	12	O	Data output bit 7 (MSB)

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage	-0.5	7	V
V <sub>I</sub>	Input voltage <sup>(2)</sup>	-0.5	7	V
V <sub>O</sub>	Voltage applied to any output in the high-impedance or power-off state <sup>(2)</sup>	-0.5	7	V
V <sub>O</sub>	Output voltage <sup>(2)(3)</sup>	-0.5	V <sub>CC</sub> + 0.5	V
I <sub>IK</sub>	Input clamp current	V <sub>I</sub> < 0	-20	mA
I <sub>OK</sub>	Output clamp current	V <sub>O</sub> < 0	-50	mA
I <sub>O</sub>	Continuous output current	V <sub>O</sub> = 0 to V <sub>CC</sub>	±35	mA
	Continuous current through V <sub>CC</sub> or GND		±70	mA
T <sub>J</sub>	Junction Temperature		150	°C
T <sub>stg</sub>	Storage temperature	-65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

(3) This value is limited to 5.5 V maximum.

### 6.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins <sup>(1)</sup>	±2000
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins <sup>(2)</sup>	±1000

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions<sup>(1)</sup>

		V <sub>CC</sub>	MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage		2	5.5	V
V <sub>IH</sub>	High-level input voltage	2 V	1.5		V
		3 V to 3.6 V	V <sub>CC</sub> × 0.7		
		4.5 V to 5.5 V	V <sub>CC</sub> × 0.7		
V <sub>IL</sub>	Low-level input voltage	2 V		0.5	V
		3 V to 3.6 V		V <sub>CC</sub> × 0.3	
		4.5 V to 5.5 V		V <sub>CC</sub> × 0.3	
V <sub>I</sub>	Input voltage		0	5.5	V
V <sub>O</sub>	Output voltage	High or low state	0	V <sub>CC</sub>	V
		3-state	0	5.5	
I <sub>OH</sub>	High-level output current	2 V		-50	μA
		3 V to 3.6 V		-6	
		4.5 V to 5.5 V		-12	
I <sub>OL</sub>	Low-level output current	2 V		50	μA
		3 V to 3.6 V		6	
		4.5 V to 5.5 V		12	
Δt/Δv	Input transition rise and fall rate	3 V to 3.6 V		100	ns/V
		4.5 V to 5.5 V		20	
T <sub>A</sub>	Operating free-air temperature		-40	85	°C

(1) All unused inputs of the device must be held at V<sub>CC</sub> or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, SCBA004.

## 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		SN74LV8154N	SN74LV8154PW	UNIT
		N (PDIP)	PW (TSSOP)	
		20 PINS	20 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	54.9	100.2	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	46.5	30.9	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	35.9	47.1	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	23.5	1.5	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	35.7	46.6	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report (SPRA953).

## 6.5 Electrical Characteristics

over recommended operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	V <sub>CC</sub>	MIN	TYP	MAX	UNIT
V <sub>OH</sub>	Output high voltage	I <sub>OH</sub> = -50 μA	2 V	1.9			V
		I <sub>OH</sub> = -6 mA	3 V	2.48			
		I <sub>OH</sub> = -12 mA	4.5 V	3.8			
V <sub>OL</sub>	Output low voltage	I <sub>OL</sub> = 50 μA	2 V			0.1	V
		I <sub>OL</sub> = 6 mA	3 V			0.44	
		I <sub>OL</sub> = 12 mA	4.5 V			0.55	
I <sub>I</sub>	Input current	V <sub>I</sub> = 5.5 V or GND	0 to 5.5 V			±1	μA
I <sub>OZ</sub>	Output off current	V <sub>O</sub> = V <sub>CC</sub> or GND	5.5 V			±5	μA
I <sub>CC</sub>	Supply current	V <sub>I</sub> = V <sub>CC</sub> or GND, I <sub>O</sub> = 0	5.5 V			20	μA
I <sub>off</sub>	Off current	V <sub>I</sub> or V <sub>O</sub> = 0 to 5.5 V	0			5	μA
C <sub>I</sub>	Input capacitance	V <sub>I</sub> = V <sub>CC</sub> or GND	5 V		3		pF
C <sub>O</sub>	Output capacitance	V <sub>O</sub> = V <sub>CC</sub> or GND	5 V		5		pF
C <sub>pd</sub>	Power dissipation capacitance	C <sub>L</sub> = No load, CCLK = 10 MHz, RCLK = 1 MHz	5 V		56		pF

## 6.6 Timing Requirements

over recommended operating free-air temperature range, V<sub>CC</sub> = 5 V ± 0.5 V (unless otherwise noted) (see Figure 3)

			MIN	UNIT
t <sub>w</sub>	Pulse duration	CLKA, CLKB, RCLK high or low	10	ns
		$\overline{\text{CCLR}}$ low	20	
t <sub>su</sub>	Set-up time	$\overline{\text{CLKBEN}}$ low before CLKB↑	10	ns
		$\overline{\text{CCLR}}$ high (inactive) before CLKA↑ or CLKB↑	10	
		CLKA↑ or CLKB↑ before RCLK↑	10	
		RCLK↑ before $\overline{\text{GAL}}$ or $\overline{\text{GAU}}$ or $\overline{\text{GBL}}$ or $\overline{\text{GBU}}$ low	10	
		$\overline{\text{GAL}}$ or $\overline{\text{GAU}}$ or $\overline{\text{GBL}}$ or $\overline{\text{GBU}}$ high (inactive) before RCLK↑	10	
t <sub>h</sub>	Hold time	$\overline{\text{CLKBEN}}$ low after CLKB↑	0	ns
		CLKA or CLKB after RCLK	0	
t <sub>z</sub> <sup>(1)</sup>	Z-period	$\overline{\text{GAL}}$ , $\overline{\text{GAU}}$ , $\overline{\text{GBL}}$ , $\overline{\text{GBU}}$ all high before one of them switches low	200	ns

(1) t<sub>z</sub> condition: C<sub>L</sub> = 50 pF, R<sub>L</sub> = 1 kΩ

### 6.7 Switching Characteristics - $V_{CC} = 3.3\text{ V} \pm 0.3\text{ V}$

 over recommended operating free-air temperature range,  $V_{CC} = 3.3\text{ V} \pm 0.3\text{ V}$  (unless otherwise noted) (see [Figure 3](#))

PARAMETER	FROM (INPUT)	TO (OUTPUT)	LOAD CAPACITANCE	MIN	TYP	MAX	UNIT	
$f_{MAX}$			$C_L = 15\text{ pF}$	40			MHz	
			$C_L = 50\text{ pF}$	25				
$t_{pd}$	RCLK	Y	$C_L = 15\text{ pF}$	1	22	38	ns	
	CLKA	$\overline{RCOA}$		1	26	44

## 7 Parameter Measurement Information

- NOTES:
- A.  $C_L$  includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low, except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high, except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics: PRR  $\leq 1\text{ MHz}$ ,  $Z_O = 50\ \Omega$ ,  $t_r \leq 3\text{ ns}$ ,  $t_f \leq 3\text{ ns}$ .
  - D. The outputs are measured one at a time, with one input transition per measurement.
  - E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$ .
  - F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$ .
  - G.  $t_{PHL}$  and  $t_{PLH}$  are the same as  $t_{pd}$ .
  - H. All parameters and waveforms are not applicable to all devices.

Figure 3. Load Circuit and Voltage Waveforms

## 8 Detailed Description

### 8.1 Overview

The SN74LV8154 device is a dual 16-bit binary counter with 3-state output registers, designed for 2-V to 5.5-V  $V_{CC}$  operation. The counters have dedicated clock inputs. The counters share a storage register clock and an asynchronous clear input. The 32-bit storage register can be mapped on the output bus 8-bit at a time. Four bus reads are needed to access the contents of both counters. The two counters can be chained by connecting  $\overline{CLKBEN}$  to  $\overline{RCOA}$ .

This 16-bit counter (A or B) feeds a 16-bit storage register, and each storage register is further divided into an upper byte and lower byte. The  $\overline{GAL}$ ,  $\overline{GAU}$ ,  $\overline{GBL}$ , and  $\overline{GBU}$  inputs are used to select the byte that needs to be output at  $Y0$ – $Y7$ .  $\overline{CLKA}$  is the clock for A counter, and  $\overline{CLKB}$  is the clock for B counter.  $\overline{RCLK}$  is the clock for the A and B storage registers. All three clock signals are positive-edge triggered.

A 32-bit counter can be realized by connecting  $\overline{CLKA}$  and  $\overline{CLKB}$  together and by connecting  $\overline{RCOA}$  to  $\overline{CLKBEN}$ .

To ensure the high-impedance state during power up or power down,  $\overline{GAL}$ ,  $\overline{GAU}$ ,  $\overline{GBL}$ , and  $\overline{GBU}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

### 8.2 Functional Block Diagram

### 8.3 Feature Description

Two 16-bit counters count up on each positive edge of the respective clock input.  $\overline{RCOA}$  is set low when counter A is full count. Counter B clock is gated by the  $\overline{CCKBEN}$  input. Connecting  $\overline{RCOA}$  to  $\overline{CCKBEN}$  together chains the counters to make one 32-bit counter.

Asynchronous  $\overline{CCLR}$  input resets both counter to zero.

One 32-bit storage register records the contents of both counters on the rising edge of  $\overline{RCLK}$ . The contents of the storage register are saved until the next rising edge of the  $\overline{RCLK}$ .

Mapped output bus can be set to high impedance or output 8-bits of the 32-bit storage register.

## 8.4 Device Functional Modes

Table 1 lists the functional modes of the SN74LV8154.

**Table 1. Function Table**

INPUTS				OUTPUT Y <sub>n</sub>
$\overline{\text{GAL}}$	$\overline{\text{GAU}}$	$\overline{\text{GBL}}$	$\overline{\text{GBU}}$	
L	H	H	H	Lower byte in A storage register
H	L	H	H	Upper byte in A storage register
H	H	L	H	Lower byte in B storage register
H	H	H	L	Upper byte in B storage register
H	H	H	H	Z

## Typical Application (continued)

### 9.2.2 Detailed Design Procedure

- Connect Y0 through Y7 to the data bus.
- Connect A, B, and C to lower address bus lines.
- Connect  $\overline{G2A}$ ,  $\overline{G2B}$ , and G1 to decoded addresses to provide 8 or more unique memory locations.
- Connect two pulse sources to CLKA and CLKB inputs. If sources have noise or slow edges then pass the signal through a Schmitt trigger buffer first.
- If only one counter is needed, connect the single pulse source to both CLKA and CLKB.
- Also connect CLKBEN to RCOA instead of ground.

Table 2. Function Table

INPUTS <sup>(1)</sup>						OUTPUT <sup>(1)</sup>	RESULT
G1	$\overline{G2A}$	$\overline{G2B}$	C	B	A	Yn	
L	X	X	X	X	X	Z	No action
X	H	X	X	X	X	Z	No action
X	X	H	X	X	X	Z	No action
H	L	L	L	L	L	A lower byte	Read lower byte of counter A storage register
H	L	L	L	L	H	A upper byte	Read upper byte of counter A storage register
H	L	L	L	H	L	B lower byte	Read lower byte of counter B storage register
H	L	L	L	H	H	B upper byte	Read upper byte of counter B storage register
H	L	L	H	L	L	Z	Save counters into storage register after changing any input
H	L	L	H	L	H	Z	Reset both counters to zero
H	L	L	H	H	L	Z	No action
H	L	L	H	H	H	Z	No action

(1) L = low, H = high, X = don't care, Z = high Impedance.

### 9.2.3 Application Curve

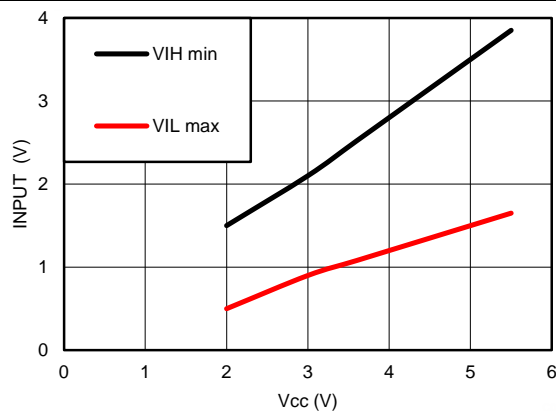

Figure 4. Input Voltage Range vs  $\overline{VCC}$

## 10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in [Recommended Operating Conditions](#) table.

Each  $V_{CC}$  terminal should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- $\mu\text{F}$  capacitor is recommended. If there are multiple  $V_{CC}$  terminals then 0.01- $\mu\text{F}$  or 0.022- $\mu\text{F}$  capacitors are recommended for each power terminal. It is ok to parallel multiple bypass capacitors to reject different frequencies of noise. Multiple bypass capacitors may be paralleled to reject different frequencies of noise. The bypass capacitor should be installed as close to the power terminal as possible for the best results.

## 11 Layout

### 11.1 Layout Guidelines

When using multiple bit logic devices, inputs should not float. In many cases, functions or parts of functions of digital logic devices are unused. Some examples are when only two inputs of a triple-input AND gate are used, or when only 3 of the 4-buffer gates are used. Such input pins should not be left unconnected because the undefined voltages at the outside connections result in undefined operational states.

Specified in [Figure 5](#) are rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or  $V_{CC}$ , whichever makes more sense or is more convenient.

### 11.2 Layout Example

**Figure 5. Layout Diagram**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
SN74LV8154N	ACTIVE	PDIP	N	20	20	Pb-Free (RoHS)	CU NIPDAU	N / A for Pkg Type	-40 to 85	SN74LV8154N	<a href="#">Samples</a>
SN74LV8154NE4	ACTIVE	PDIP	N	20	20	Pb-Free (RoHS)	CU NIPDAU	N / A for Pkg Type	-40 to 85	SN74LV8154N	<a href="#">Samples</a>
SN74LV8154PW	ACTIVE	TSSOP	PW	20	70	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	LV8154	<a href="#">Samples</a>
SN74LV8154PWR	ACTIVE	TSSOP	PW	20	2000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	LV8154	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of  $\leq 1000$ ppm threshold. Antimony trioxide based flame retardants must also meet the  $\leq 1000$ ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF SN74LV8154 :**

- Enhanced Product: [SN74LV8154-EP](#)

NOTE: Qualified Version Definitions:

- Enhanced Product - Supports Defense, Aerospace and Medical Applications

PW (R-PDSO-G20)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
  - B. This drawing is subject to change without notice.
  -  Body length does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0,15 each side.
  -  Body width does not include interlead flash. Interlead flash shall not exceed 0,25 each side.
  - E. Falls within JEDEC MO-153

PW (R-PDSO-G20)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Publication IPC-7351 is recommended for alternate design.
  - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
  - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.

N (R-PDIP-T\*\*)

PLASTIC DUAL-IN-LINE PACKAGE

16 PINS SHOWN

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - $\triangle C$  Falls within JEDEC MS-001, except 18 and 20 pin minimum body length (Dim A).
  - $\triangle D$  The 20 pin end lead shoulder width is a vendor option, either half or full width.

4040049/E 12/2002

## IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
