The DS8830, SN55183, and SN75183 dual differential line drivers are designed to provide differential output signals with high current capability for driving balanced lines, such as twisted pair, at normal line impedances without high power dissipation. These devices can be used as TTL expander/phase splitters, because the output stages are similar to TTL totem-pole outputs.

The driver is of monolithic single-chip construction, and both halves of the dual circuits use common power supply and ground terminals.

The SN55183 is characterized for operation over the full military temperature range of –55°C to 125°C. The DS8830 and SN75183 are characterized for operation from 0°C to 70°C.
DS8830, SN55183, SN75183
DUAL DIFFERENTIAL LINE DRIVERS

logic symbol†

† This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12. Pin numbers shown are for the D, J, N, and W packages.

logic diagram (positive logic)

Positive logic: \( y = ABCD, Z = \overline{ABCD} \)

Pin numbers shown are for the D, J, N, and W packages.
schematic (each driver)

Resistor values shown are nominal.
Pin numbers shown are for the D, J, N, and W packages.
absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage, \( V_{CC} \) (see Note 1) .................................................................................................................. 7 V
Input voltage, \( V_I \) ........................................................................................................................................ 5.5 V
Duration of output short circuit (see Note 2) .................................................................................................. 1 s
Continuous total power dissipation ........................................................................................................... See Dissipation Rating Table
Storage temperature range, \( T_{stg} \) ........................................................................................................ –65°C to 150°C
Lead temperature 1.6 mm (1/16 inch) from case for 10 seconds: D or N package ................................. 260°C
Lead temperature 1.6 mm (1/16 inch) from case for 60 seconds: J package ............................... 300°C
Case temperature for 60 seconds, \( T_C \): FK package ................................................................. 260°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values, except differential voltages, are with respect to network ground terminal.
2. Not more than one output should be shorted to ground at any one time.

PARAMETER MEASUREMENT INFORMATION

(a) OUTPUTS Y AND Z

(b) DIFFERENTIAL OUTPUT

NOTES:
A. The pulse generators have the following characteristics: $Z_O = 50 \, \Omega$, $t_F \leq 10 \, \text{ns}$, $t_R \leq 10 \, \text{ns}$, $t_W = 0.5 \, \mu\text{s}$, $PRR \leq 1 \, \text{MHz}$.
B. $C_L$ includes probe and jig capacitance.
C. Waveforms are monitored on an oscilloscope with $r_i \geq 1 \, \text{M} \Omega$.

Figure 1. Test Circuits and Voltage Waveforms
† Operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied.
TYPICAL CHARACTERISTICS†

PROPAGATION DELAY TIME (DIFFERENTIAL OUTPUT) vs FREE-AIR TEMPERATURE

TOTAL POWER DISSIPATION (BOTH DRIVERS) vs FREQUENCY

† Operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied.
APPLICATION INFORMATION

NOTES:

A. When the inputs are open circuited, the output is high. A capacitor may be used for dc isolation of the line-terminating resistor. At the frequency of operation, the impedance of the capacitor should be relatively small.

Example: let \( f = 5 \text{ MHz} \)
\[ C = 0.002 \mu\text{F} \]

\[
Z_{\text{circuit}} = \frac{1}{2\pi f C} = \frac{1}{2\pi (5 \times 10^6) (0.002 \times 10^{-6})} \\
Z_{\text{circuit}} \approx 16\Omega
\]

B. Use of a capacitor to control response time is optional.

</table>

---

(1) The marketing status values are defined as follows:
- **ACTIVE**: Product device recommended for new designs.
- **LIFEBUY**: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
- **NRND**: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
- **PREVIEW**: Device has been announced but is not in production. Samples may or may not be available.
- **OBSOLETE**: TI has discontinued the production of the device.

(2) **RoHS**: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt**: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green**: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) **MSL, Peak Temp.** - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.
There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF SN55183, SN55183-SP, SN75183 :**

- Catalog: SN75183, SN55183
- Military: SN55183
- Space: SN55183-SP

**NOTE: Qualified Version Definitions:**

- Catalog - TI's standard catalog product
- Military - QML certified for Military and Defense Applications
- Space - Radiation tolerant, ceramic packaging and qualified for use in Space-based application
