1 Features

- IEC 61000-4-2 Level 4 ESD Protection
  - ±16-kV Contact Discharge
  - ±16-kV Air Gap Discharge
- IEC 61000-4-4 EFT Protection
  - 80 A (5/50 ns)
- IEC 61000-4-5 Surge Protection
  - 2.5 A (8/20 µs)
- IO Capacitance: 0.5-pF (Typ), 0.65-pF (Max)
- Ultra-low ESD Clamping Voltage
  - 8.9 V at 16-A TLP
  - −4.6 V at −16-A TLP
- Low R_{DYN}
  - 0.25 Ω IO to GND
  - 0.18 Ω GND to IO
- DC Breakdown Voltage: 5 V (Minimum)
- Ultra-low Leakage Current: 10 nA (Maximum)
- Supports High Speed Interfaces up to 6 Gbps
- Industrial Temperature Range: −40°C to +125°C
- Industry Standard 0402 and 0201 Packages

2 Applications

- End Equipment
  - Set-Top Boxes
  - Laptops and Desktops
  - TV and Monitors
  - Mobile and Tablets
  - DVR and NVR
- Interfaces
  - HDMI 2.0
  - HDMI 1.4b
  - USB 3.0
  - DisplayPort 1.2
  - PCI Express 3.0

3 Description

The TPD1E04U04 is a unidirectional TVS ESD protection diode for HDMI 2.0 and USB 3.0 circuit protection. The TPD1E04U04 is rated to dissipate ESD strikes above the maximum level specified in the IEC 61000-4-2 international standard (Level 4).

This device features a 0.5-pF IO capacitance making it ideal for protecting high-speed interfaces up to 6 Gbps such as HDMI 2.0 and USB 3.0. The low dynamic resistance and ultra-low clamping voltage ensure system level protection against transient events for sensitive SoCs.

The TPD1E04U04 is offered in the industry standard 0402 (DPY) and 0201 (DPL) packages.

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

7 Detailed Description

7.1 Overview
The TPD1E04U04 is a unidirectional ESD Protection Diode with ultra-low capacitance designed for HDMI 2.0 and USB 3.0. This device can dissipate ESD strikes above the maximum level specified by the IEC 61000-4-2 International Standard. The extremely low clamping voltage and low $R_{\text{DYN}}$ make this device ideal for supporting the next-generation small feature size SoCs. The low capacitance also makes this device ideal for protecting any high-speed signal pins on these sensitive interface pins.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 IEC 61000-4-2 ESD Protection
The IO pins can withstand ESD events up to ±16-kV contact and ±16-kV air gap. An ESD-surge clamp diverts the current to ground.

7.3.2 IEC 61000-4-4 EFT Protection
The IO pins can withstand an electrical fast transient burst of up to 80 A (5/50 ns waveform, 4 kV with 50-Ω impedance). An ESD-surge clamp diverts the current to ground.

7.3.3 IEC 61000-4-5 Surge Protection
The IO pins can withstand surge events up to 2.5 A and 19 W (8/20 μs waveform). An ESD-surge clamp diverts this current to ground.

7.3.4 IO Capacitance
The capacitance between each IO pin to ground is 0.5-pF (typical) and 0.65-pF (maximum). This device supports data rates up to 6 Gbps.

7.3.5 Ultra-Low ESD Clamping Voltage
The IO pins feature an ESD clamp that is capable of clamping the voltage to 8.9 V ($I_{\text{TLP}} = 16$ A) and $-4.6$ V ($I_{\text{TLP}} = -16$ A).

7.3.6 Low $R_{\text{DYN}}$
The IO pins feature an ESD clamp that has an extremely low $R_{\text{DYN}}$ of 0.25 Ω (IO to GND) and 0.18 Ω (GND to IO) which prevents system damage during ESD events.

7.3.7 DC Breakdown Voltage
The DC breakdown voltage of each IO pin is a minimum of 5 V. This ensures that sensitive equipment is protected from surges above the reverse standoff voltage of 3.6 V.
Feature Description (continued)

7.3.8 Ultra Low Leakage Current
The IO pins feature an ultra-low leakage current of 10 nA (maximum) with a bias of 2.5 V.

7.3.9 Supports High Speed Interfaces
This device is capable of supporting high speed interfaces up to 6 Gbps, because of the very low IO capacitance.

7.3.10 Industrial Temperature Range
This device features an industrial operating range of –40°C to +125°C.

7.3.11 Easy Flow-Through Routing Package
The layout of this device makes it simple and easy to add protection to an existing layout. The packages offers flow-through routing, requiring minimal modification to an existing layout.

7.4 Device Functional Modes
The TPD1E04U04 is a passive integrated circuit that triggers when voltages are above $V_{BR}$ or below $V_F$. During ESD events, voltages as high as ±16-kV (air) can be directed to ground via the internal diode network. When the voltages on the protected line fall below the trigger levels of TPD1E04U04 (usually within 10s of nano-seconds) the device reverts to passive.
8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI’s customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TPD1E04U04 is a diode type TVS which is used to provide a path to ground for dissipating ESD events on high-speed signal lines between a human interface connector and a system. As the current from ESD passes through the TVS, only a small voltage drop is present across the diode. This is the voltage presented to the protected IC. The low $R_{\text{DYN}}$ of the triggered TVS holds this voltage, $V_{\text{CLAMP}}$, to a safe level for the protected IC.

8.2 Typical Application

![HDMI 2.0 ESD Schematic](image-url)

8.2.1 Design Requirements

For this design example eight TPD1E04U04 devices and five TPD1E05U06 devices are being used in a HDMI 2.0 application. This provides a complete ESD protection scheme.

Given the HDMI 2.0 application, the parameters listed in Table 1 are known.

<td>up to 3 GHz</td>
</tr>
<tr>
<td>Signal range on control lines</td>
<td>0 V to 5.5 V</td>
</tr>
</tbody>
</table>
8.2.2 Detailed Design Procedure

8.2.2.1 Signal Range
The TPD1E04U04 supports signal ranges between 0 V and 3.6 V, which supports the TMDS pairs on the HDMI 2.0 application. The TPD1E05U06 supports signal ranges between 0 V and 5.5 V, which supports the control lines.

8.2.2.2 Operating Frequency
The TPD1E04U04 has a 0.5-pF (typical) capacitance, which supports the HDMI 2.0 data rates of 6-Gbps. The TPD1E05U06 has a 0.5-pF (typical) capacitance as well, which easily supports the control line data rates.

8.2.3 Application Curves

Figure 14. HDMI2.0 6-Gbps TP2 Eye Diagram (Bare Board)

Figure 15. HDMI2.0 6-Gbps TP2 Eye Diagram (With TPD1E04U04)
9  Power Supply Recommendations

This device is a passive ESD device so there is no need to power it. Take care not to violate the recommended IO specification (0 V to 3.6 V) to ensure the device functions properly.

10  Layout

10.1  Layout Guidelines

• The optimum placement is as close to the connector as possible.
  – EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures.
  – The PCB designer must minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.
• Route the protected traces as straight as possible.
• Eliminate any sharp corners on the protected traces between the TVS and the connector by using rounded corners with the largest radii possible.
  – Electric fields tend to build up on corners, increasing EMI coupling.

- **Picking ESD Diodes for Ultra High-Speed Data Lines**

11.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

11.3 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI’s views; see TI’s Terms of Use.

**TI E2E™ Online Community** *TI’s Engineer-to-Engineer (E2E) Community.* Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI’s Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

11.4 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

11.6 Glossary

**SLYZ022 — TI Glossary.**

This glossary lists and explains terms, acronyms, and definitions.

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. </tbody>
</table>

(1) The marketing status values are defined as follows:
- **ACTIVE**: Product device recommended for new designs.
- **LIFEBUY**: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
- **NRND**: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
- **PREVIEW**: Device has been announced but is not in production. Samples may or may not be available.
- **OBSOLETE**: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check [http://www.ti.com/productcontent](http://www.ti.com/productcontent) for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

NOTES:
A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5–1994.
B. This drawing is subject to change without notice.
C. SON (Small Outline No-Lead) package configuration.
NOTES:  
A. All linear dimensions are in millimeters.  
B. This drawing is subject to change without notice.  
C. Publication IPC-7351 is recommended for alternate designs.  
D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.  
E. Maximum stencil thickness 0.127 mm (5 mils). All linear dimensions are in millimeters.  
F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.  
G. Side aperture dimensions over-print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.
