FEATURES

- OPERATION UP TO 500kHz
- EXCELLENT LINEARITY
  - ±0.01% max at 10kHz FS
  - ±0.05% max at 100kHz FS
- V/F OR F/V CONVERSION
- MONOTONIC
- VOLTAGE OR CURRENT INPUT

APPLICATIONS

- INTEGRATING A/D CONVERTER
- SERIAL FREQUENCY OUTPUT
- ISOLATED DATA TRANSMISSION
- FM ANALOG SIGNAL MOD/DEMOD
- MOTOR SPEED CONTROL
- TACHOMETER

DESCRIPTION

The VFC32 voltage-to-frequency converter provides an output frequency accurately proportional to its input voltage. The digital open-collector frequency output is compatible with all common logic families. Its integrating input characteristics give the VFC32 excellent noise immunity and low nonlinearity.

Full-scale output frequency is determined by an external capacitor and resistor and can be scaled over a wide range. The VFC32 can also be configured as a frequency-to-voltage converter.

The VFC32 is available in 14-pin plastic DIP, SO-14 surface-mount, and metal TO-100 packages. Commercial, industrial, and military temperature range models are available.
## SPECIFICATIONS

At \( T_A = +25^\circ C \) and \( V_{CC} = \pm 15V \), unless otherwise noted.

### INPUT (V/F CONVERTER)

\[
F_{OUT} = \frac{V_IN}{7.5 \times R_1}
\]

**Voltage Range**

- **Positive Input**: >0 +0.25mA
- **Negative Input**: >0 –10 mA

**Current Range**

- **Inverting Input**: 20 100 nA
- **Noninverting Input**: 100 250 nA

**Bias Current**

- **Inverting Input**: 20 nA
- **Noninverting Input**: 100 nA

**Offset Voltage**

- **Input**: 14 mV

**Differential Impedance**

- **Input**: 300 || 10 kΩ || pF

**Common-Mode Impedance**

- **Input**: 300 || 3 MΩ || pF

### INPUT (F/V CONVERTER)

\[
V_{OUT} = 7.5 \times R_1 \times F_{IN}
\]

**Impedance**

- **Input**: 50 || 10 kΩ || pF

**Logic Levels**

- **“1”**: +1.0 V
- **“0”**: –0.05 V

**Pulse-width Range**

- **Input**: 0.1 – 150 kHz

### ACCURACY

**Linearity Error**

- **Oper**: ≤0.01 Hz
- **Freq**: ≤ 10 kHz
- **Oper**: ≤0.025 Hz
- **Freq**: ≤ 100 kHz
- **Oper**: ≤0.05 Hz
- **Freq**: ≤ 500 kHz

**Offset Error Input**

- **Oper**: ≤0.015 Hz

**Gain Error**

- **Oper**: ≤0.025 Hz

**Full Scale Drift**

- **Oper**: ≤ 0.015 Hz

**Gain Drift**

- **Oper**: ≤ 0.001 Hz

### OUTPUT (V/F CONVERTER)

**Logic “0”**

- **I_{SINK} = 8mA**

**Logic “1”**

- **V_{O} = 15V**

**Pulse Width**

- **For Best Linearity**: 0.25/F_MAX

**Fall Time**

- **I_{OUT} = 5mA**

### OUTPUT (F/V CONVERTER)

**Voltage I/O**

- **≤ 7mA**

**Current I/O**

- **≤ 7 VDC**

**Impedance**

- **Closed Loop**: 1 W

**Capacitive Load Without Oscillation**: 100 pF

### DYNAMIC RESPONSE

**Full Scale Frequency**

- **F/V**: 500 kHz

**Dynamic Range**

- **(V/F) to Specified Linearity**: 6 decades

**Settling Time**

- **(V/F) to Specified Linearity for a Full Scale Input Step**: 6

**Overload Recovery**

- **< 50% Overload**: 6

### POWER SUPPLY

**Rated Voltage**

- **Voltage Range**: ±15 V

**Voltage Range**

- **Quiescent Current**: ±5.5 mA

**Operating Temperature**

- **Specification**: 0 – 25 °C
- **Storage**: –25 – 85 °C

### TEMPERATURE RANGE

**Specification**

- **Operating**: –25 – 85 °C
- **Storage**: –25 – 85 °C

---

**NOTES:**

1. A 25% duty cycle (0.25mA input current) is recommended for best linearity.
2. Adjustable to zero. See Offset and Gain Adjustment section.
3. Linearity error is specified at any operating frequency from the straight line intersecting 90% of full scale frequency and 0.1% of full scale frequency. See Discussion of Specifications section.
4. Above 200 kHz, it is recommended all grades be operated below +85°C.
5. FSR = Full Scale Range (corresponds to full scale frequency and full scale input voltage).
7. Positive drift is defined to be increasing frequency with increasing temperature.
8. For operations above 200 kHz up to 500 kHz, see Discussion of Specifications and Installation and Operation sections.
9. One pulse of new frequency plus 1 μs.

PIN CONFIGURATIONS

ELECTROSTATIC DISCHARGE SENSITIVITY

This integrated circuit can be damaged by ESD. Burr-Brown recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

The information provided herein is believed to be reliable; however, BURR-BROWN assumes no responsibility for inaccuracies or omissions. BURR-BROWN assumes no responsibility for the use of this information, and all use of such information shall be entirely at the user's own risk. Prices and specifications are subject to change without notice. No patent rights or licenses to any of the circuits described herein are implied or granted to any third party. BURR-BROWN does not authorize or warrant any BURR-BROWN product for use in life support devices and/or systems.
TYPICAL PERFORMANCE CURVES

At $T_A = +25^\circ C$ and $V_{cc} = \pm 15$V, unless otherwise noted.

- **LINEARITY ERROR vs FULL SCALE FREQUENCY**
- **LINEARITY ERROR vs OPERATING FREQUENCY**
- **FULL SCALE DRIFT vs FULL SCALE FREQUENCY**
**APPLICATION INFORMATION**

Figure 1 shows the basic connection diagram for frequency-to-voltage conversion. R₁ sets the input voltage range. For a 10V full-scale input, a 40kΩ input resistor is recommended. Other input voltage ranges can be achieved by changing the value of R₁:

\[
R_1 = \frac{V_{FS}}{0.25\text{mA}}
\]  

(1)

R₁ should be a metal film type for good stability. Manufacturing tolerances can produce approximately ±10% variation in output frequency. Full-scale output frequency can be trimmed by adjusting the value of R₁—see Figure 3.

The full-scale output frequency is determined by C₁. Values shown in Figure 1 are for a full-scale output frequency of 10kHz. Values for other full-scale frequencies can be read from Figure 2. Any variation in C₁—tolerance, temperature drift, aging—directly affect the output frequency. Ceramic NPO or silver-mica types are a good choice.

For full-scale frequencies above 200kHz, use larger capacitor values as indicated in Figure 2, with R₁ = 20kΩ.

The value of the integrating capacitor, C₂, does not directly influence the output frequency, but its value must be chosen within certain bounds. Values chosen from Figure 2 produce approximately 2.5Vp-p integrator voltage waveform. If C₂’s value is made too low, the integrator output voltage can exceed its linear output swing, resulting in a nonlinear response. Using C₂ values larger than shown in Figure 2 is acceptable.

Accuracy or temperature stability of C₂ is not critical because its value does not directly affect the output frequency. For best linearity, however, C₂ should have low leakage and low dielectric absorption. Polycarbonate and other film capacitors are generally excellent. Many ceramic types are adequate, but some low-voltage ceramic capacitor types may degrade nonlinearity. Electrolytic types are not recommended.

**FREQUENCY OUTPUT PIN**

The frequency output terminal is an open-collector logic output. A pull-up resistor is usually connected to a 5V logic supply to create standard logic-level pulses. It can, however, be connected to any power supply up to +VCC. Output pulses have a constant duration and positive-going during the one-shot period. Current flowing in the open-collector output transistor returns through the Common terminal. This terminal should be connected to logic ground.

![FIGURE 1. Voltage-to-Frequency Converter Circuit.](image)
**PRINCIPLES OF OPERATION**

The VFC32 operates on a principle of charge balance. The signal input current is equal to \( \frac{V_{IN}}{R_1} \). This current is integrated by input op amp and \( C_2 \), producing a downward ramping integrator output voltage. When the integrator output ramps to the threshold of the comparator, the one-shot is triggered. The 1mA reference current is switched to the integrator input during the one-shot period, causing the integrator output ramp upward. After the one-shot period, the integrator again ramps downward.

The oscillation process forces a long-term balance of charge (or average current) between the input signal current and the reference current. The equation for charge balance is:

\[
I_{IN} = I_{R(AVERAGE)}
\]  

(2)

\[
\frac{V_{IN}}{R_1} = f_O t_{OS}(1mA)
\]  

(3)

Where:

- \( f_O \) is the output frequency
- \( t_{OS} \) is the one-shot period, equal to \( t_{OS} = 7500 \, C_1 \) (Farads)

(4)

The values suggested for \( R_1 \) and \( C_1 \) are chosen to produce a 25% duty cycle at full-scale frequency output. For full-scale frequencies above 200kHz, the recommended values produce a 50% duty cycle.

**FREQUENCY-TO-VOLTAGE CONVERSION**

Figure 4 shows the VFC32 connected as a frequency-to-voltage converter. The capacitive-coupled input network \( C_3 \), \( R_6 \) and \( R_7 \) allow standard 5V logic levels to trigger the comparator input. The comparator triggers the one-shot on the falling edge of the frequency input pulses. Threshold voltage of the comparator is approximately -0.7V. For frequency input waveforms less than 5V logic levels, the \( R_6/R_7 \) voltage divider can be adjusted to a lower voltage to assure that the comparator is triggered.

The value of \( C_1 \) is chosen from Figure 2 according to the full-scale input frequency. \( C_2 \) smooths the output voltage waveform. Larger values of \( C_2 \) reduce the ripple in the output voltage. Smaller values of \( C_2 \) allow the output voltage to settle faster in response to a change in input frequency. Resistor \( R_1 \) can be trimmed to achieve the desired output voltage at the full-scale input frequency.

(1) The marketing status values are defined as follows:
- **ACTIVE**: Product device recommended for new designs.
- **LIFEBUY**: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
- **NRND**: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
- **PREVIEW**: Device has been announced but is not in production. Samples may or may not be available.
- **OBSOLETE**: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check [http://www.ti.com/productcontent](http://www.ti.com/productcontent) for the latest availability information and additional product content details.
- **TBD**: The Pb-Free/Green conversion plan has not been defined.
- **Pb-Free (RoHS)**: TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
- **Pb-Free (RoHS Exempt)**: This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
- **Green (RoHS & no Sb/Br)**: TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (http://www.ti.com/sc/docs/stdterms.htm) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and implied warranties of the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, “Designers”) understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers’ applications and compliance of their applications (and of all TI products used in or for Designers’ applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI’s provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, “TI Resources”) are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer’s company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI’s provision of TI Resources does not expand or otherwise alter TI’s applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY COPYRIGHT, TRADEMARK, PATENT, OR ANY OTHER INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED “AS IS” AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers’ own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer’s non-compliance with the terms and provisions of this Notice.
