DESCRIPTION/ORDERING INFORMATION

The SN74GTL2107 is a 12-bit translator that interfaces between the 3.3-V LVTTL chip set I/O and the Xeon™ processor GTL–/GTL/GTL+ I/O. The device is designed for platform health management in dual-processor applications.

PIN DESCRIPTION

PIN NO.	SYMBOL	NAME AND FUNCTION
1	V_{REF}	GTL reference voltage
2–6, 8, 10–13, 15, 23	ENn nAn	Data and enable inputs/outputs (LVTTL) on all inputs and pin 15 output. Remaining outputs are open drain.
7, 9, 16, 17–22, 24–27	nBn	Data inputs/outputs (GTL–/GTL/GTL+)
14	GND	Ground (0 V)
28	V_{CC}	Positive supply voltage

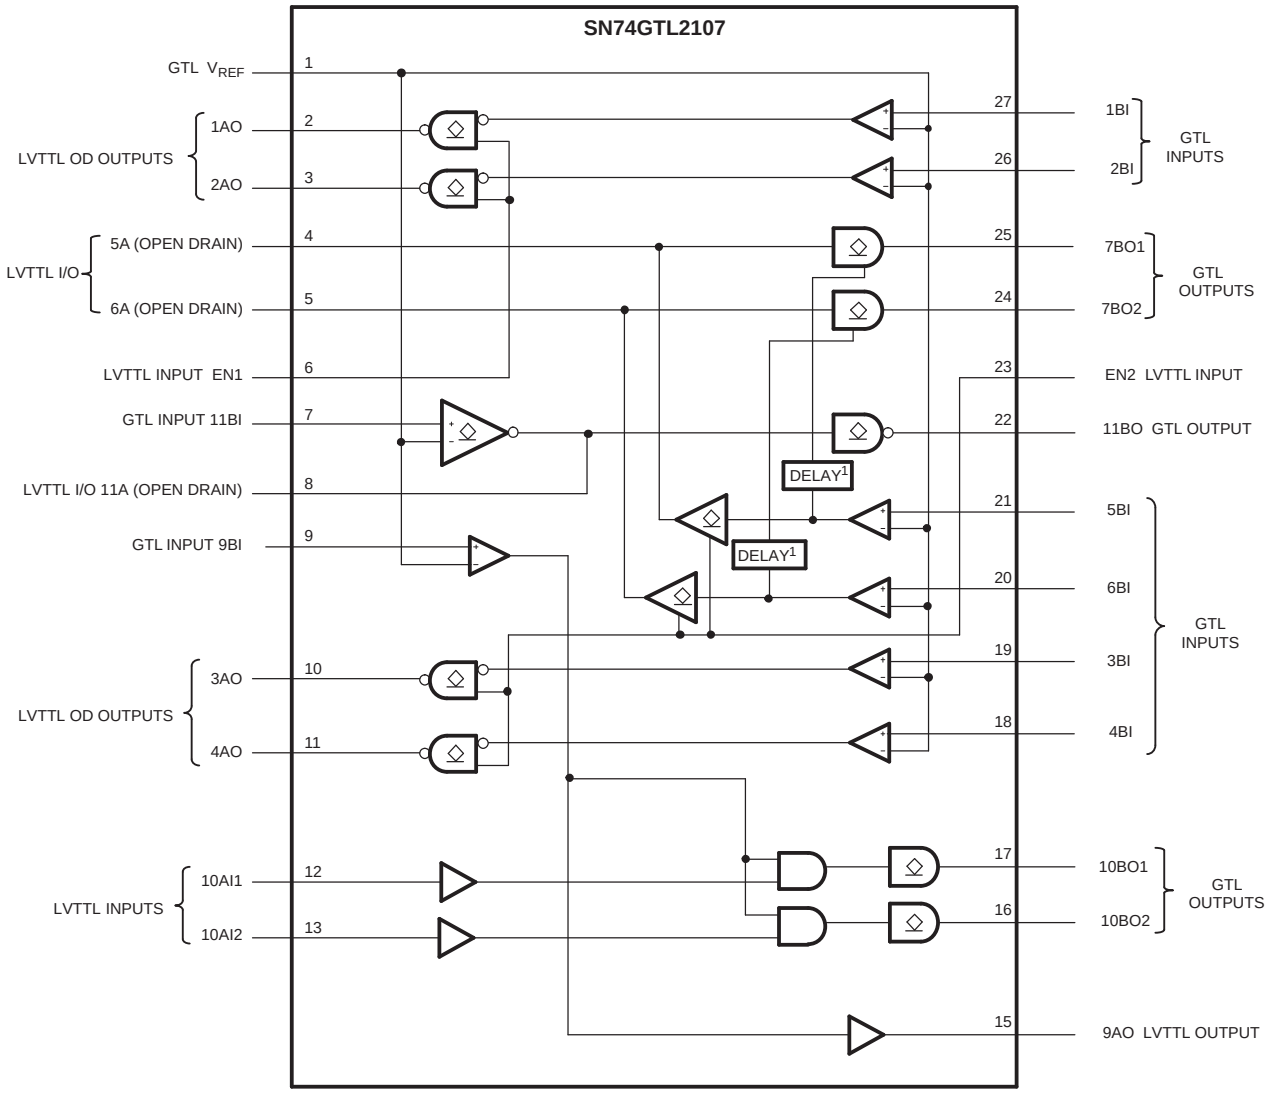
LOGIC SYMBOL



(1) The enable on 7BO1/7BO2 includes a delay that prevents a transient condition (where 5BI/6BI go from low to high, and the low to high on 5A/6A lags up to 100 ns) from causing a low glitch on the 7BO1/7BO2 outputs.

Absolute Maximum Ratings(1)(2)

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V_{CC}	Supply voltage range		–0.5	4.6	V
V_I	Input voltage range(3)	A port (LVTTL)	–0.5	4.6	V
		B port (GTL)	–0.5	4.6	
V_O	Output voltage range (output in OFF or HIGH state)(3)	A port	–0.5	4.6	V
		B port	–0.5	4.6	
I_{IK}	Input diode current	$V_I < 0$		–50	mA
I_{OK}	Output diode current	$V_O < 0$		–50	mA
	Current into any output in the LOW state	A port		32	mA
		B port		30	
	Current into any output in the HIGH state	A port		–32	mA
θ_{JA}	Package thermal impedance(4)			62	°C/W
T_{stg}	Storage temperature range		–60	150	°C

(1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) Voltages are referenced to GND (ground = 0 V).
(3) The input and output negative voltage ratings may be exceeded if the input and output clamp current ratings are observed.
(4) The performance capability of a high-performance integrated circuit, in conjunction with its thermal environment, can create junction temperatures that are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed 150°C.

Frequently Asked Questions

Question 1: On the SN74GTL2107 LVTTL input, specifically 10AI1 and 10AI2, when the SN74GTL2107 is powered down, these inputs may be pulled up to 3.3 V, and we want to ensure that there is no leakage path to the power rail under this condition. Are the LVTTL inputs high impedance when the device is powered down, and will there be any leakage?

Answer 1: When the device is powered down, the LVTTL inputs are in a high-impedance state and do not leak to V_{DD} if they are pulled high while the device is powered down.

Question 2: Do all the LVTTL inputs have the same powered-down characteristic?

Answer 2: Yes

Question 3: What is the condition of the other GTL I/O and LVTTL output pins when the device is powered down?

Answer 3: The open-drain outputs, both GTL and LVTTL, do not leak to the power supply if they are pulled high while the device is powered down. The GTL inputs also do not leak to the power supply under the same conditions. The LVTTL totem-pole outputs, however, are not open-drain type outputs, and there is current flow on these pins if they are pulled high when V_{DD} is at ground.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
