

- Highest Performance Floating-Point Digital Signal Processor (DSP)
  - '320C40-60:
    - 33-ns Instruction Cycle Time,
    - 330 MOPS, 60 MFLOPS,
    - 30 MIPS, 384M Bytes/s
  - '320C40-50:
    - 40-ns Instruction Cycle Time
  - '320C40-40:
    - 50-ns Instruction Cycle Time
- Six Communications Ports
- Six-Channel Direct Memory Access (DMA) Coprocessor
- Single-Cycle Conversion to and From IEEE-754 Floating-Point Format
- Single Cycle,  $1/x$ ,  $1/\sqrt{x}$
- Source-Code Compatible With TMS320C3x
- Single-Cycle 40-Bit Floating-Point, 32-Bit Integer Multipliers
- Twelve 40-Bit Registers, Eight Auxiliary Registers, 14 Control Registers, and Two Timers
- IEEE 1149.1† (JTAG) Boundary Scan Compatible
- Two Identical External Data and Address Buses Supporting Shared Memory Systems and High Data-Rate, Single-Cycle Transfers:
  - High Port-Data Rate of 120M Bytes/s ('C40-60) (Each Bus)
  - 16G-Byte Continuous Program/Data/Peripheral Address Space
  - Memory-Access Request for Fast, Intelligent Bus Arbitration
  - Separate Address-Bus, Data-Bus, and Control-Enable Pins
  - Four Sets of Memory-Control Signals Support Different Speed Memories in Hardware
- 325-Pin Ceramic Grid Array (GF Suffix)
- Fabricated Using 0.72- $\mu$ m Enhanced Performance Implanted CMOS (EPIC™) Technology by Texas Instruments (TI™)
- Software-Communication-Port Reset
- NMI With Bus-Grant Feature

**325-PIN GF GRID ARRAY PACKAGE  
(BOTTOM VIEW)‡**

‡ See Pin Assignments table and Pin Functions table for location and description of all pins.

- Separate Internal Program, Data, and DMA Coprocessor Buses for Support of Massive Concurrent Input/Output (I/O) of Program and Data Throughput, Maximizing Sustained Central Processing Unit (CPU) Performance
- On-Chip Program Cache and Dual-Access/Single-Cycle RAM for Increased Memory-Access Performance
  - 512-Byte Instruction Cache
  - 8K Bytes of Single-Cycle Dual-Access Program or Data RAM
  - ROM-Based Boot Loader Supports Program Bootstrap Using 8-, 16-, or 32-Bit Memories or One of the Communication Ports
- IDLE2 Clock-Stop Power-Down Mode
- 5-V Operation

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

## DIGITAL SIGNAL PROCESSOR

SPRS038 – JANUARY 1996

### functions

This section lists signal descriptions for the '320C40 device. The '320C40 pin functions table lists each signal, number of pins, operating mode(s) (that is, input, output, or high-impedance state as indicated by I, O, or Z, respectively), and function. The signals are grouped according to function.

#### Pin Functions

NAME	NO. OF PINS	TYPE†	DESCRIPTION
<b>GLOBAL-BUS EXTERNAL INTERFACE (80 PINS)</b>			
D31–D0	32	I/O/Z	32-bit data port of the global-bus external interface
$\overline{DE}$	1	I	Data-bus-enable signal for the global-bus external interface
A30–A0	31	O/Z	31-bit address port of the global-bus external interface
$\overline{AE}$	1	I	Address-bus-enable signal for the global-bus external interface
STAT3–STAT0	4	O	Status signals for the global-bus external interface
$\overline{LOCK}$	1	O	Lock signal for the global-bus external interface
$\overline{STRB0}^\ddagger$	1	O/Z	Access strobe 0 for the global-bus external interface
$R/\overline{W0}^\ddagger$	1	O/Z	Read/write signal for $\overline{STRB0}$ accesses
$\overline{PAGE0}^\ddagger$	1	O/Z	Page signal for $\overline{STRB0}$ accesses
$\overline{RDY0}^\ddagger$	1	I	Ready signal for $\overline{STRB0}$ accesses
$\overline{CE0}^\ddagger$	1	I	Control enable for the $\overline{STRB0}$ , $\overline{PAGE0}$ , and $R/\overline{W0}$ signals
$\overline{STRB1}^\ddagger$	1	O/Z	Access strobe 1 for the global-bus external interface
$R/\overline{W1}^\ddagger$	1	O/Z	Read/write signal for $\overline{STRB1}$ accesses
$\overline{PAGE1}^\ddagger$	1	O/Z	Page signal for $\overline{STRB1}$ accesses
$\overline{RDY1}^\ddagger$	1	I	Ready signal for $\overline{STRB1}$ accesses
$\overline{CE1}^\ddagger$	1	I	Control enable for the $\overline{STRB1}$ , $\overline{PAGE1}$ , and $R/\overline{W1}$ signals
<b>LOCAL-BUS EXTERNAL INTERFACE (80 PINS)</b>			
LD31–LD0	32	I/O/Z	32-bit data port of the local-bus external interface
$\overline{LDE}$	1	I	Data-bus-enable signal for the local-bus external interface
LA30–LA0	31	O/Z	31-bit address port of the local-bus external interface
$\overline{LAE}$	1	I	Address-bus-enable signal for the local-bus external interface
LSTAT3–LSTAT0	4	O	Status signals for the local-bus external interface
$\overline{LLOCK}$	1	O	Lock signal for the local-bus external interface
$\overline{LSTRB0}^\ddagger$	1	O/Z	Access strobe 0 for the local-bus external interface
$LR/\overline{W0}$	1	O/Z	Read/write signal for $\overline{LSTRB0}$ accesses
$\overline{LPAGE0}$	1	O/Z	Page signal for $\overline{LSTRB0}$ accesses
$\overline{LRDY0}$	1	I	Ready signal for $\overline{LSTRB0}$ accesses
$\overline{LCE0}$	1	I	Control enable for the $\overline{LSTRB0}$ , $\overline{LPAGE0}$ , and $LR/\overline{W0}$ signals
$\overline{LSTRB1}^\ddagger$	1	O/Z	Access strobe 1 for the local-bus external interface
$LR/\overline{W1}$	1	O/Z	Read/write signal for $\overline{LSTRB1}$ accesses
$\overline{LPAGE1}$	1	O/Z	Page signal for $\overline{LSTRB1}$ accesses
$\overline{LRDY1}$	1	I	Ready signal for $\overline{LSTRB1}$ accesses
$\overline{LCE1}$	1	I	Control enable for the $\overline{LSTRB1}$ , $\overline{LPAGE1}$ , and $LR/\overline{W1}$ signals

† I = input, O = output, Z = high impedance

‡ Signal's effective address range is defined by the local/global STRB ACTIVE bits.

**Pin Functions (Continued)**

NAME	NO. OF PINS	TYPE†	DESCRIPTION
<b>COMMUNICATION PORT 0 INTERFACE (12 PINS)</b>			
C0D7–C0D0	8	I/O	Communication port 0 data bus
CREQ0	1	I/O	Communication port 0 token-request signal
CAK0	1	I/O	Communication port 0 token-request-acknowledge signal
CSTRB0	1	I/O	Communication port 0 data-strobe signal
CRDY0	1	I/O	Communication port 0 data-ready signal
<b>COMMUNICATION PORT 1 INTERFACE (12 PINS)</b>			
C1D7–C1D0	8	I/O	Communication port 1 data bus
CREQ1	1	I/O	Communication port 1 token-request signal
CAK1	1	I/O	Communication port 1 token-request-acknowledge signal
CSTRB1	1	I/O	Communication port 1 data-strobe signal
CRDY1	1	I/O	Communication port 1 data-ready signal
<b>COMMUNICATION PORT 2 INTERFACE (12 PINS)</b>			
C2D7–C2D0	8	I/O	Communication port 2 data bus
CREQ2	1	I/O	Communication port 2 token-request signal
CAK2	1	I/O	Communication port 2 token-request-acknowledge signal
CSTRB2	1	I/O	Communication port 2 data-strobe signal
CRDY2	1	I/O	Communication port 2 data-ready signal
<b>COMMUNICATION PORT 3 INTERFACE (12 PINS)</b>			
C3D7–C3D0	8	I/O	Communication port 3 data bus
CREQ3	1	I/O	Communication port 3 token-request signal
CAK3	1	I/O	Communication port 3 token-request-acknowledge signal
CSTRB3	1	I/O	Communication port 3 data-strobe signal
CRDY3	1	I/O	Communication port 3 data-ready signal
<b>COMMUNICATION PORT 4 INTERFACE (12 PINS)</b>			
C4D7–C4D0	8	I/O	Communication port 4 data bus
CREQ4	1	I/O	Communication port 4 token-request signal
CAK4	1	I/O	Communication port 4 token-request-acknowledge signal
CSTRB4	1	I/O	Communication port 4 data-strobe signal
CRDY4	1	I/O	Communication port 4 data-ready signal
<b>COMMUNICATION PORT 5 INTERFACE (12 PINS)</b>			
C5D7–C5D0	8	I/O	Communication port 5 data bus
CREQ5	1	I/O	Communication port 5 token-request signal
CAK5	1	I/O	Communication port 5 token-request-acknowledge signal
CSTRB5	1	I/O	Communication port 5 data-strobe signal
CRDY5	1	I/O	Communication port 5 data-ready signal

† I = input, O = output, Z = high impedance

## DIGITAL SIGNAL PROCESSOR

SPRS038 – JANUARY 1996

### Pin Functions (Continued)

NAME	NO. OF PINS	TYPE†	DESCRIPTION
<b>INTERRUPTS, I/O FLAGS, RESET, TIMER (12 PINS)</b>			
$\overline{\text{IIOF3}}-\overline{\text{IIOF0}}$	4	I/O	Interrupt and I/O flags
$\overline{\text{NMI}}$	1	I	Nonmaskable interrupt. $\overline{\text{NMI}}$ is sensitive to a low-going edge.
$\overline{\text{IACK}}$	1	O	Interrupt acknowledge
$\overline{\text{RESET}}$	1	I	Reset signal
$\overline{\text{RESETLOC1}}-\overline{\text{RESETLOC0}}$	2	I	Reset-vector location pins
ROMEN	1	I	On-chip ROM enable (0 = disable, 1 = enable)
TCLK0	1	I/O	Timer 0 pin
TCLK1	1	I/O	Timer 1 pin
<b>CLOCK (4 PINS)</b>			
X1	1	O	Crystal pin
X2/CLKIN	1	I	Crystal/oscillator pin
H1	1	O	H1 clock
H3	1	O	H3 clock
<b>POWER (70 PINS)</b>			
CVSS	15	I	Ground pins
DVSS	15	I	Ground pins
IVSS	6	I	Ground pins
DVDD	13	I	5- $V_{\text{DC}}$ supply pins
GADVDD	3	I	5- $V_{\text{DC}}$ supply pins
GDDVDD	3	I	5- $V_{\text{DC}}$ supply pins
LADVDD	3	I	5- $V_{\text{DC}}$ supply pins
LDDVDD	3	I	5- $V_{\text{DC}}$ supply pins
SUBS	1	I	Substrate pin (tie to ground)
VDDL	4	I	5- $V_{\text{DC}}$ supply pins
VSSL	4	I	Ground pins
<b>EMULATION (7 PINS)</b>			
TCK	1	I	IEEE 1149.1 test port clock
TDO	1	O/Z	IEEE 1149.1 test port data out
TDI	1	I	IEEE 1149.1 test port data in
TMS	1	I	IEEE 1149.1 test port mode select
$\overline{\text{TRST}}$	1	I	IEEE 1149.1 test port reset
EMU0	1	I/O	Emulation pin 0
EMU1	1	I/O	Emulation pin 1

† I = input, O = output, Z = high impedance

# TMS320C40

## DIGITAL SIGNAL PROCESSOR

SPRS038 – JANUARY 1996

---

### description

The '320C40 digital signal processors (DSPs) are 32-bit, floating-point processors manufactured in 0.72- $\mu$ m, double-level metal CMOS technology. The '320C40 is a part of the fourth generation of DSPs from Texas Instruments and is designed primarily for parallel processing.

### operation

The '320C40 has six on-chip communication ports for processor-to-processor communication with no external hardware and simple communication software. This allows connectivity to other 'C4x processors with no external-glue logic. The communication ports remove input/output bottlenecks, and the independent smart DMA coprocessor is able to handle the CPU input/output burden.

### central processing unit

The '320C40 CPU is configured for high-speed internal parallelism for the highest sustained performance. The key features of the CPU are:

- Eight operations/cycle:
  - 40/32-bit floating-point/integer multiply
  - 40/32-bit floating-point/integer ALU operation
  - Two data accesses
  - Two address register updates
- IEEE floating-point conversion
- Divide and square-root support
- 'C3x assembly language compatibility
- Byte and halfword accessibility

### DMA coprocessor

The DMA coprocessor allows concurrent I/O and CPU processing for the highest sustained CPU performance. The key features of the DMA processor are:

- Link pointers allow DMA channels to auto-initialize without CPU intervention.
- Parallel CPU operation and DMA transfers
- Six DMA channels support memory-to-memory data transfers.
- Split-mode operation doubles the available DMA channel to 12 when data transfers to and from a communication port are required.

### communication ports

The '320C40 is the first DSP with on-chip communication ports for processor-to-processor communication with no external hardware and simple communication software. The features of the communication ports are:

- Direct interprocessor communication and processor I/O
- Six communication ports for direct interprocessor communication and processor I/O
- 20M-bytes/s bidirectional interface on each communication port for high-speed multiprocessor interface
- Separate input and output 8-word-deep FIFO buffers for processor-to-processor communication and I/O
- Automatic arbitration and handshaking for direct processor-to-processor connection

**communication-port software reset ('C40 silicon revision  $\geq$  5.0)**

The input and output FIFO levels for a communication port can be flushed by writing at least two back-to-back values to its communication-port-software reset address as specified in Table 1. This feature is not present in 'C40 silicon revision  $<5.0$ . This software reset flushes any word or byte already present in the FIFOs but it does not affect the status of the communication-port pins. Figure 2 shows an example of communication-port-software reset.

**Table 1. Communication-Port Software-Reset Address**

COMMUNICATION PORT	SOFTWARE RESET ADDRESS
0	0x0100043
1	0x0100053
2	0x0100063
3	0x0100073
4	0x0100083
5	0x0100093

```

      pop   R0             ;
      pop   AR0            ;
      rets                  ; Return

```

**Figure 2. Example of Communication-Port-Software Reset**

### **$\overline{\text{NMI}}$ with bus-grant feature ('C40 silicon revision $\geq 5.0$ )**

The '320C40 devices have a software-configurable feature which allows forcing the internal-peripheral bus to ready when the  $\overline{\text{NMI}}$  signal is asserted. This feature is not present in 'C40 silicon revision  $< 5.0$ . The  $\overline{\text{NMI}}$  bus-grant feature is enabled when bits 19–18 of the status register (ST) are set to 10b. When enabled, a peripheral bus-grant signal is generated on the falling edge of  $\overline{\text{NMI}}$ . When  $\overline{\text{NMI}}$  is asserted and this feature is not enabled, the CPU stalls on access to the peripheral bus if it is not ready. A stall condition occurs when writing to a full FIFO or reading an empty FIFO. This feature is useful in correcting communication-port errors when used in conjunction with the communication-port software-reset feature.

### **IDLE2 clock-stop power-down mode ('C40 silicon revision $\geq 5.0$ )**

The '320C40 has a clock-stop mode or power-down mode (IDLE2) to achieve extremely low-power consumption. When an IDLE2 instruction is executed, the clocks are halted with H1 being held high. To exit IDLE2, assert one of the  $\overline{\text{IIOF3}}-\overline{\text{IIOF0}}$  pins configured as an external interrupt instead of a general-purpose I/O. A macro showing how to generate the IDLE2 opcode is given in Figure 3. During this power-down mode:

- No instructions are executed.
- The CPU, peripherals, and internal memory retain their previous state.
- The external-bus outputs are idle. The address lines remain in their previous state, the data lines are in the high-impedance state, and the output-control signals are inactive.

```
; -----;  
; IDLE2: Macro to generate idle2 opcode          ;  
; -----;  
IDLE2      .macro  
            .word      06000001h  
            .endm
```

**Figure 3. Example of Software Subroutine Using IDLE2**

IDLE2 is exited when one of the five external interrupts ( $\overline{\text{NMI}}$  and  $\overline{\text{IIOF3}}-\overline{\text{IIOF0}}$ ) is asserted low for at least four input clocks (two H1 cycles). The clocks then start after a delay of two input clocks (one H1 cycle). The clocks can start in the opposite phase; that is, H1 can be high when H3 was high before the clocks were stopped. However, the H1 and H3 clocks remain 180° out of phase with each other.

During IDLE2 operation, an external interrupt can be recognized and serviced by the CPU if it is enabled before entering IDLE2 and asserted for at least two H1 cycles. For the processor to recognize only one interrupt, the interrupt pin must be configured for edge-trigger mode or asserted less than three cycles in level-trigger mode. Any external interrupt pin can wake up the device from IDLE2, but for the CPU to recognize that interrupt, it must also be enabled. If an interrupt is recognized and executed by the CPU, the instruction following the IDLE2 instruction is not executed until after execution of a return opcode.

When the device is in emulation mode, the CPU executes an IDLE2 instruction as if it were an IDLE instruction. The clocks continue to run for correct operation of the emulator.

## development tools

The 'C40 is supported by a host of parallel-processing development tools for developing and simulating code easily and for debugging parallel-processing systems. The code generation tools include:

- An ANSI C compiler optimized with a runtime support library that supports use of communication ports and DMA.
- Third party support for C, C++ and Ada compilers
- Several operating systems available for parallel-processing support, as well as DMA and communication port drivers
- An assembler and linker with support for mapping program and data to parallel processors

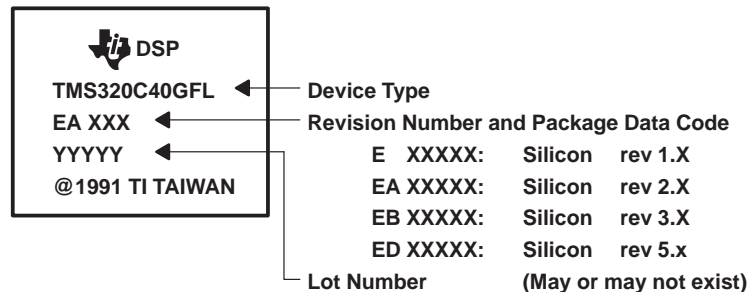

The simulation tools include:

- Parallel DSP system-level simulation with LAI hardware verification (HV) model and full function (FF) model.
- TI software simulator with high-level language debugger interface for simulating a single processor.

The hardware development and verification tools include:

- Parallel processor in-circuit emulator and high-level language debugger: XDS510.
- Parallel processor development system (PPDS) with four '320C40s, local and global memory, and communication port connections.

# TMS320C40

## DIGITAL SIGNAL PROCESSOR

SPRS038 – JANUARY 1996

### absolute maximum ratings over specified temperature range (unless otherwise noted)<sup>†</sup>

Supply voltage range, $V_{DD}$ (see Note 1)	– 0.3 V to 7 V
Voltage range on any pin	– 0.3 V to 7 V
Output voltage range	– 0.3 V to 7 V
Operating case temperature range, $T_C$	0°C to 85°C
Storage temperature range, $T_{stg}$	– 55°C to 150°C

<sup>†</sup> Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to  $V_{SS}$ .

### recommended operating conditions (see Note 2)

		MIN	TYP <sup>‡</sup>	MAX	UNIT
$V_{DD}$	Supply voltages (DDV <sub>DD</sub> , etc.)	4.75	5	5.25	V
$V_{IH}$	High-level input voltage	X2/CLKIN		$V_{DD} + 0.3^{\S}$	V
		All other pins		$V_{DD} + 0.3^{\S}$	
$V_{IL}$	Low-level input voltage	– 0.3 <sup>§</sup>		0.8	V
$I_{OH}$	High-level output current			– 300	μA
$I_{OL}$	Low-level output current			2	mA
$T_C$	Operating case temperature			85	°C

<sup>‡</sup> All typical values are at  $V_{DD} = 5$  V,  $T_A$  (ambient air temperature) = 25°C.

<sup>§</sup> This parameter is characterized but not tested.

NOTE 2: All input and output voltage levels are TTL compatible, except for CLKIN. CLKIN can be driven by CMOS clock.

### electrical characteristics over recommended ranges of supply voltage and operating case temperature (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP <sup>¶</sup>	MAX	UNIT
$V_{OH}$	High-level output voltage	$V_{DD} = \text{MIN}, I_{OH} = \text{MAX}$	2.4	3	V
$V_{OL}$	Low-level output voltage	$V_{DD} = \text{MIN}, I_{OL} = \text{MAX}$	0.3	0.6	V
$I_Z$	Three-state current	$V_{DD} = \text{MAX}$	–20	20	μA
$I_{IC}$	Input current, X2/CLKIN only	$V_I = V_{SS} \text{ to } V_{DD}$	– 30	30	μA
$I_{IP}$	Input current	Inputs with internal pullups (See Note 3)	–400	20	μA
$I_I$	Input current	$V_I = V_{SS} \text{ to } V_{DD}$	–10	10	μA
$I_{CC}$	Supply current	$T_A = 25^\circ\text{C}, V_{DD} = \text{MAX}, f_X = \text{MAX}$ (See Note 4)	350	850	mA
				950	
$C_I$	Input capacitance			15 <sup>#</sup>	pF
$C_O$	Output capacitance			15 <sup>#</sup>	pF

<sup>¶</sup> All typical values are at  $V_{DD} = 5$  V,  $T_A$  (ambient air temperature) = 25°C.

<sup>#</sup> This parameter is specified by design but not tested.

NOTES: 3. Pins with internal pullup devices: TDI, TCK, TMS. Pin with internal pulldown device:  $\overline{\text{TRST}}$ .

4.  $f_X$  is the input clock frequency. The maximum value (max) for the '320C40-40, '320C40-50, and '320C40-60 is 40, 50 and 60 MHz, respectively.

## PARAMETER MEASUREMENT INFORMATION

Where:  $I_{OL}$  = 2 mA (all outputs)  
 $I_{OH}$  = 300  $\mu$ A (all outputs)  
 $V_{Load}$  = 2.15 V  
 $C_T$  = 80 pF typical load circuit capacitance.

Figure 4. Test Load Circuit

### signal transition levels

TTL-level outputs are driven to a minimum logic-high level of 2.4 V and to a maximum logic-low level of 0.6 V. Output transition times are specified as follows.

For a high-to-low transition on a TTL-compatible output signal, the level at which the output is said to be no longer high is 2 V and the level at which the output is said to be low is 1 V. For a low-to-high transition, the level at which the output is said to be no longer low is 1 V and the level at which the output is said to be high is 2 V. See Figure 5.

Figure 5. TTL-Level Outputs

Transition times for TTL-compatible inputs are specified as follows. For a high-to-low transition on an input signal, the level at which the input is said to be no longer high is 2 V and the level at which the input is said to be low is 0.8 V. For a low-to-high transition on an input signal, the level at which the input is said to be no longer low is 0.8 V and the level at which the input is said to be high is 2 V. See Figure 6.

Figure 6. TTL-Level Inputs

### PARAMETER MEASUREMENT INFORMATION

#### timing parameter symbology

Timing parameter symbols used herein were created in accordance with JEDEC Standard 100-A. In order to shorten the symbols, pin names that have both global and local applications are generally represented with (L) immediately preceding the basic signal name (for example, (L)RDYx represents both the global term RDYx and local term LRDYx). Other pin names and related terminology have been abbreviated as follows, unless otherwise noted:

A	(L)A30–(L)A0 or (L)Ax	IACK	$\overline{\text{IACK}}$
AE	$\overline{\text{(L)AE}}$	IF	$\overline{\text{IIOF(3–0)}}$ or $\overline{\text{IIOFx}}$
ASYNCH	Asynchronous reset signals in the high-impedance state	IIOF	$\overline{\text{IIOF(3–0)}}$ or $\overline{\text{IIOFx}}$
BYTE	Byte transfer	LOCK	$\overline{\text{(L)LOCK}}$
CA	$\overline{\text{CACK(0–5)}}$ or $\overline{\text{CACKx}}$	P	$t_{\text{c(H)}}$
CD	C(0–5)D7–C(0–5)D0 or CxDx	PAGE	(L)PAGE0 and (L)PAGE1 or (L)PAGEx
CE	$\overline{\text{(L)CE0}}$ , $\overline{\text{(L)CE1}}$ , or $\overline{\text{(L)CEx}}$	RDY	$\overline{\text{(L)RDY0}}$ , $\overline{\text{(L)RDY1}}$ , or $\overline{\text{(L)RDYx}}$
CI	CLKIN	RESET	$\overline{\text{RESET}}$
COMM	Asynchronous reset signals	RW	(L)R/ $\overline{\text{W0}}$ , (L)R/ $\overline{\text{W1}}$ , or (L)R/ $\overline{\text{Wx}}$
CONTROL	Control signals	S	$\overline{\text{(L)STRB0}}$ , $\overline{\text{(L)STRB1}}$ or $\overline{\text{(L)STRBx}}$
CRQ	$\overline{\text{CREQ(0–5)}}$ or $\overline{\text{CREQx}}$	ST	(L)STAT3–(L)STAT0 or (L)STATx
CRDY	$\overline{\text{CRDY(0–5)}}$ or $\overline{\text{CRDYx}}$	TCK	TCK
CS	$\overline{\text{CSTRB(0–5)}}$ or $\overline{\text{CSTRBx}}$	TCLK	TCLK0, TCLK1, or TCLKx
D	(L)D31–(L)D0 or (L)Dx	TDO	TDO
DE	$\overline{\text{(L)DE}}$	TMS	TMS/TDI
H	H1, H3	WORD	32-bit word transfer

$^\ddagger$  This value is characterized but not tested.

POST OFFICE BOX 1443 • HOUSTON, TEXAS 77251-1443

- NOTES:
- A. Asynchronous reset signals that go to a high logic level after  $\overline{\text{RESET}}$  returns to a high state include  $\overline{\text{CREQ}}_y$ ,  $\overline{\text{CACK}}_x$ ,  $\overline{\text{CSTRB}}_x$ , and  $\overline{\text{CRDY}}_y$  (where  $x = 0, 1$  or  $2$  and  $y = 3, 4$  or  $5$ ).
  - B.  $\overline{\text{RESET}}$  is an asynchronous input and can be asserted at any point during a clock cycle. If the specified timings are met, the exact sequence shown occurs; otherwise, an additional delay of one clock cycle can occur.
  - C. For Figure 19 only, (L)Dx includes D31–D0, LD31–LD0, and CxD7–CxD0, (L)Ax includes LA(30–0) and A(30–0).
  - D. Control signals  $\overline{\text{LSTRB}}_0$ ,  $\overline{\text{LSTRB}}_1$ ,  $\overline{\text{STRB}}_0$ ,  $\overline{\text{STRB}}_1$ , (L)STAT3–(L)STAT0, (L)LOCK, (L)R/W0, and (L)R/W1 go high while (L)PAGE0 and (L)PAGE1 go low.
  - E. Asynchronous reset signals that go into the high-impedance state after  $\overline{\text{RESET}}$  goes low include  $\overline{\text{TCLK}}_0$ ,  $\overline{\text{TCLK}}_1$ ,  $\overline{\text{IIOF}}_3$ – $\overline{\text{IIOF}}_0$ , and the communication-port control signals  $\overline{\text{CREQ}}_x$ ,  $\overline{\text{CACK}}_y$ ,  $\overline{\text{CSTRB}}_y$ , and  $\overline{\text{CRDY}}_x$  (where  $x = 0, 1$  or  $2$ , and  $y = 3, 4$  or  $5$ ). At reset, ports 0, 1, and 2 become outputs, while ports 3, 4, and 5 become inputs.

Figure 19.  $\overline{\text{RESET}}$  Timing

# TMS320C40 DIGITAL SIGNAL PROCESSOR

SPRS038 – JANUARY 1996

## timing for $\overline{\text{IIOF}}_x$ interrupt response [ $P = t_{c(H)}$ ] (see Notes 6, 7 and Figure 20)

NO.		TMS320C40-40 TMS320C40-50			TMS320C40-60			UNIT
		MIN	TYP	MAX	MIN	TYP	MAX	
1	$t_{su}(\overline{\text{IIOF}}_x\text{-H1L})$ Setup time, $\overline{\text{IIOF}}_x$ before H1 low	11†			11†			ns
2	$t_{w}(\text{INT})$ Pulse duration, to assure one interrupt is seen (see Note 8)	P	1.5P	< 2P‡	P	1.5P	< 2P‡	ns

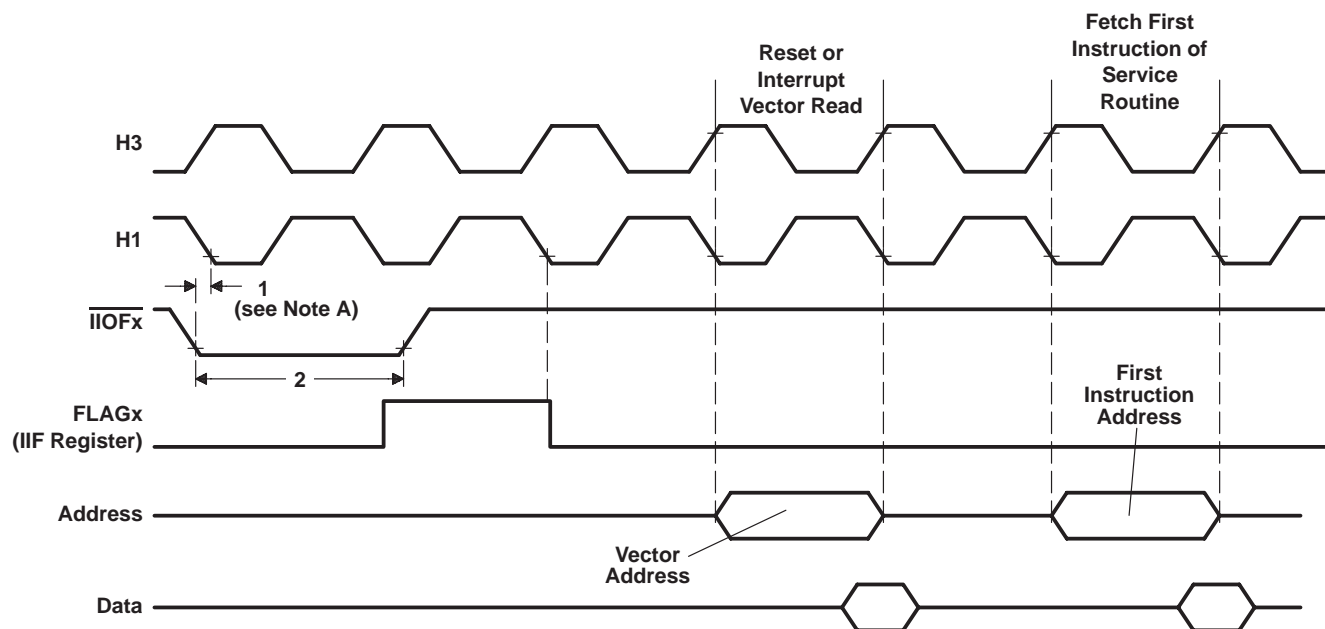

† If this timing is not met, the interrupt is recognized in the next cycle.

‡ This value applies only to level-triggered interrupts and is specified by design but not tested.

NOTES: 6.  $\overline{\text{IIOF}}_x$  is an asynchronous input and can be asserted at any point during a clock cycle. If the specified timings are met, the exact sequence shown occurs; otherwise, an additional delay of one clock cycle can occur.

7. Edge-triggered interrupts require a setup of time (1) and a minimum duration of P. No maximum duration limit exists.

8. Level-triggered interrupts require interrupt-pulse duration of at least 1P wide (P = one H1 period) to assure it will be seen. It must be less than 2P wide to assure it will be responded to only once. Recommended pulse duration is 1.5P.

NOTE A: The 'C40 can accept an interrupt from the same source every two H1 clock cycles.

Figure 20.  $\overline{\text{IIOF}}_x$  Interrupt-Response Timing [ $P = t_{c(H)}$ ]

timing for  $\overline{\text{IACK}}$  (see Note 9 and Figure 21)

NO.		TMS320C40-40 TMS320C40-50		TMS320C40-60		UNIT
		MIN	MAX	MIN	MAX	
1	$t_{d(H1L - \overline{\text{IACKL}})}$ Delay time, H1 low to $\overline{\text{IACK}}$ low		9		7	ns
2	$t_{d(H1L - \overline{\text{IACKH}})}$ Delay time, H1 low to $\overline{\text{IACK}}$ high during first cycle of IACK instruction data read		9		7	ns

NOTE 9: The  $\overline{\text{IACK}}$  output is active for the entire duration of the bus cycle and is, therefore, extended if the bus cycle utilizes wait states.

Figure 21.  $\overline{\text{IACK}}$  Timing

# TMS320C40 DIGITAL SIGNAL PROCESSOR

SPRS038 – JANUARY 1996

## communication-port word-transfer-cycle timing† [P = t<sub>c(H)</sub>] (see Note 10 and Figure 22)

NO.			TMS320C40-40 TMS320C40-50†		TMS320C40-60†		UNIT
			MIN	MAX	MIN	MAX	
1	t <sub>c(WORD)</sub> ‡§	Cycle time, word transfer (4 bytes = 1 word)	1.5P+7	2.5P+170	1.5P+7	2.5P+170	ns
2	t <sub>d(CRDYL-CSL)W</sub> ‡	Delay time, $\overline{\text{CRDYx}}$ low to $\overline{\text{CSTRBx}}$ low between back-to-back write cycles	1.5P+7	2.5P+28	1.5P+7	2.5P+28	ns

† For these timing values, it is assumed that the receiving 'C4x is ready to receive data. Line propagation delay is not considered.

‡ This value is characterized but not tested.

§ t<sub>c(WORD)</sub> max = 2.5P + 28 ns + the maximum summed values of 4 × t<sub>d(CSL-CRDYL)R</sub>, 3 × t<sub>d(CRDYL-CSH)</sub>, 3 × t<sub>d(CSH-CRDYH)R</sub>, and 3 × t<sub>d(CRDYH-CSL)W</sub> as seen in Figure 23. This timing assumes two 'C4xs are connected.

NOTE 10: These timings apply only to two communicating 'C4xs. When a non-'C4x device communicates with a 'C40, timings can be longer. No restriction exists in this case on how slow the transfer could be except when using early silicon (C40 PG 1.x or 2.x). Refer to the  $\overline{\text{CSTRB}}$  width restriction in Section 8.9.1 of the *TMS320C4x User's Guide* (literature number SPRU063B).

◻ = When signal is an input (clear = when signal is an output).

† Begins byte 0 of the next word.

NOTE A: For correct operation during token exchange, the two communicating 'C4xs must have CLKIN frequencies within a factor of 2 of each other (in other words, at most, one of the 'C4xs can be twice as fast as the other).

**Figure 22. Communication-Port Word-Transfer-Cycle Timing [P = t<sub>c(H)</sub>]**

communication-port byte-cycle timing (write and read) (see Note 11 and Figure 23)

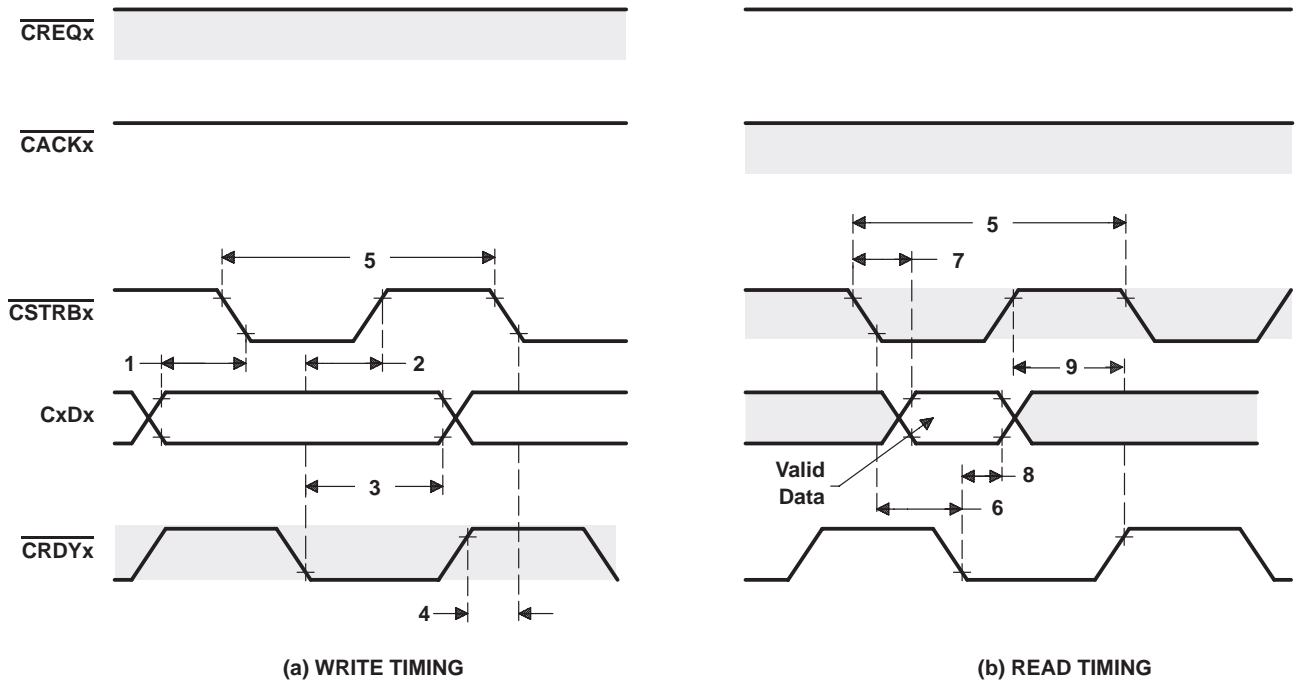

NO.			TMS320C40-40 TMS320C40-50		TMS320C40-60		UNIT
			MIN	MAX	MIN	MAX	
1	$t_{su}(CD-CSL)W$	Setup time, CxDx valid before $\overline{CSTRBx}$ low (write)	2		2		ns
2	$t_d(CRDYL-CSH)W$	Delay time, $\overline{CRDYx}$ low to $\overline{CSTRBx}$ high (write)	0†	12	0†	12	ns
3	$t_h(CRDYL-CD)W$	Hold time, CxDx after $\overline{CRDYx}$ low (write)	2		2		ns
4	$t_d(CRDYH-CSL)W$	Delay time, $\overline{CRDYx}$ high to $\overline{CSTRBx}$ low for subsequent bytes (write)	0†	12	0†	12	ns
5	$t_c(BYTE)^\ddagger$	Cycle time, byte transfer		44§		44§	ns
6	$t_d(CSL-CRDYL)R$	Delay time, $\overline{CSTRBx}$ low to $\overline{CRDYx}$ low (read)	0†	10	0†	10	ns
7	$t_{su}(CSH-CD)R$	Setup time, CxDx valid after $\overline{CSTRBx}$ high (read)	0		0		ns
8	$t_h(CRDYL-CD)R$	Hold time, CxDx valid after $\overline{CRDYx}$ low (read)	2		2		ns
9	$t_d(CSH-CRDYH)R$	Delay time, $\overline{CSTRBx}$ high to $\overline{CRDYx}$ high (read)	0†	10	0†	10	ns

† This value is specified by design but not tested.

‡  $t_c(BYTE)$  max = summed maximum values of  $t_d(CRDY-CSH)$ ,  $t_d(CSL-CRDYL)R$ ,  $t_d(CSH-CRDYH)R$ , and  $t_d(CRDYH-CSL)W$ . This assumes two 'C4xs are connected.

§ This value is characterized but not tested.

NOTE 11: Communication port timing does not include line length delay.

■ = When signal is an input (clear = when signal is an output).

Figure 23. Communication-Port Byte-Cycle Timing (Write and Read)

## PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
TMS320C40GFL60	NRND	Production	CPGA (GF)   325	10   null	No	AU	N/A for Pkg Type	-	TMS320C40GFL60 @1991 TI
TMS320C40GFL60.A	NRND	Production	CPGA (GF)   325	10   null	No	AU	N/A for Pkg Type	See TMS320C40GFL60	TMS320C40GFL60 @1991 TI

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF TMS320C40 :**

- Catalog : [SM320C40](#)
- Military : [SMJ320C40](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Military - QML certified for Military and Defense Applications

## GF (S-CPGA-P325)

## CERAMIC PIN GRID ARRAY

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. Index mark can appear on top or bottom, depending on package vendor.
  - D. Pins are located within 0.010 (0,25) diameter of true position relative to each other at maximum material condition and within 0.030 (0,76) diameter relative to the edge of the ceramic.
  - E. This package can be hermetically sealed with metal lids or with ceramic lids using glass frit.
  - F. The pins can be gold-plated or solder-dipped.
  - G. Package thickness of 0.165 (4,19) / 0.120 (3,05) includes package body and lid.
  - H. Falls within JEDEC MO-128AK

## IMPORTANT NOTICE AND DISCLAIMER

TI PROVIDES TECHNICAL AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS AND IMPLIED, INCLUDING WITHOUT LIMITATION ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you fully indemnify TI and its representatives against any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI's products are provided subject to [TI's Terms of Sale](#), [TI's General Quality Guidelines](#), or other applicable terms available either on [ti.com](#) or provided in conjunction with such TI products. TI's provision of these resources does not expand or otherwise alter TI's applicable warranties or warranty disclaimers for TI products. Unless TI explicitly designates a product as custom or customer-specified, TI products are standard, catalog, general purpose devices.

TI objects to and rejects any additional or different terms you may propose.
