OMAP[™] processor for e-readers

TI's second generation of e-readers includes a new software electrophoretic display (EPD) controller-based solution that allows customers to differentiate, innovate and create the ultimate user experience.

Product Bulletin

Overview

Tl's latest OMAP36xx application processor is the first well-proven, high-performance, 800-MHz Cortex-A8-based solution for e-readers using a software EPD controller. It will allow designers to deliver an outstanding user experience so that consumers can use e-books in new ways.

Differentiate and innovate

TI's powerful E Ink-certified DSP software EPD controller is implemented in such a way that it can support multiple types of displays. Compared to non-upgradable fixed hardware solutions (which do not allow for differentiation), the ability to bring constant updates and customizations to the software controller is a powerful weapon that allows our customers to stay on top of technology and market needs.

Improved system cost

TI's OMAP3621 has been designed to address the trade-off between cost and performance. Our goal is to satisfy our customers' need for sleek and modern designs while improving power consumption and user experience. Using low-power DDR, a smaller package allows our customers to create a very lightweight, thin modern and low-power-consumption device that will satisfy even the most demanding consumers.

Performance

- Resolutions supported:
 - 2,048 x 1,536 (QXGA) at 106 Hz
 - 3,200 x 2,048 (WQSXGA) at 50 Hz
- Unlimited number of regional updates for impressive animations and differentiated Uls
- Dual-screen support:
 - EPD and EPD
 - EPD and LCD
- Software flexibility to adapt to any sudden technology changes such as new color technologies
 - Capability to drive any EPD color, high-resolution or large flexibl displays
 - Faster PDF launch times than any other ARM9-/ARM11-based processors

Manufacturing capabilities

Tl's reputation makes it a trustworthy supplier that can deliver high-quality products in large quantities.

Extended battery life

Battery life is the No. 1 top priority for end customers. Ti's well-proven, best-in-class power management techniques have satisfied the Smartphone market for many years. Our well proven experience, when brought to the consumer market, improves the overall user experience.

E-readers support structure

Ti's consumer business line offers a strong baseline of support, reinforced by trained FAEs around the world. We believe that high-quality products are developed with high-quality support.

High-quality analog

Tl's e-book development platform incorporates high-quality analog devices. Many analog devices have been optimized to best interact with each other, further optimizing platform performance and overall product quality. Tl's wide analog portfolio allows customers to customize their platforms.

E Ink-certified software EPD controller

TI's OMAPTM 3 e-book solution employs a unique DSP-based software controller to drive E Ink's Vizplex electrophoretic displays whether they are black and white or color.

OMAP3611 PDF performance (Cortex-A8 running at 600 MHz only)

Benchmark conducted on three PDF files stored on an SD card and rendered, scaled and displayed on 16 levels of grayscale (4-bit) monochrome display. Decoding done on Cortex-A8, with no specific hardware acceleration or optimizations.

New EPD controller software version 2

- EPD controller software version 2
 - Unlimited partial update: software can re-write in a "zone" being updated
 - Per-pixel driving : mouse pointer, fast menu, easy handwriting
 - Keeps software compatibility with version 1 controller
 - Flexibility to be updated (OTA)/improved
- What it will mean for OEMs
 - Ease of programming to best take advantage of the software EPD controller
 - Simple API
 - Non-EPD-aware applications will perform well with the software EPD controller using generic API
 - EPD-aware applications can use dedicated API for best-in-class effects
- · What it will mean for end users
 - Smoother and improved user interface
 - More applications can be addressed
 - Handwriting recognition
 - Virtual keypad with visual feedback
 - Animations
 - Games
- Why it's better than the current hardware controller
 - Flexibility to adapt any type of panel and features (EIH V110, V220, V250, next gen, LG GIP)
 - Software flexibility for color processing
 - No limitations to concurrent regional updates

- Improved UI responsiveness
- Higher quality
- Improved battery life
- Instant on/off
- Allows ultra-slim and light designs
- Very fast page turns
- Color support for next-generation E Ink displays

PDF rendering and profiling using the software EPD controller

User's guide		Texas Instruments TRM	EDN magazine
	13,300 KB – color (202 pages)	76,000 KB – black and white (6,609 pages – text with pictures)	16,500 KB – color, ads and text (66 pages – complex document)
File opening time (first page displayed)	2.1 seconds	2.1 seconds	3 seconds

Advanced power management at SoC levels

TI OMAP technology is divided into eight distinct physical power domains, which can be separately enabled or disabled by software. TI's SmartReflex™ intelligent technology includes improved software techniques that can be divided into two main categories:

Active power management.

Power consumed by the switching activities in the circuits involves all system components: hardware modules, device drivers, OS and applications. It employs three main techniques: adaptive voltage scaling (AVS), dynamic power switching (DPS) and dynamic voltage and frequency scaling (DVFS).

· Static leakage management.

Leakage because of lower process nodes is always present, even when no logic operations are performed. We have introduced a technique called static leakage management to reduce this leakage.

SmartReflex technologies	Description	
Adaptive voltage scaling (AVS)	Maintains high performance while minimizing voltage based on silicon process and temperature.	
Dynamic power switching (DPS)	Dynamically switches modules from active state to retention or off-state mode when computational tasks are completed and not needed at the moment.	
Dynamic voltage and frequency scaling (DVFS)	Dynamically adjusts voltage and frequency to adapt to the performance required.	
Static leakage management (SLM)	Reduces leakage power by switching the entire device into a low-power mode when no system activity is required. Relies on several power modes, from standby to power off mode.	

Lower system cost approach

At the platform level:

In this fast-changing and evolving market, flexibility and reusability have been critical to the success or failure of many OEMs/ODMs. TI's e-book development system approach is software-optimized and ready to address the development of multiple products based on the same core design (i.e., multimedia e-readers/tablets), allowing you to achieve important cost savings.

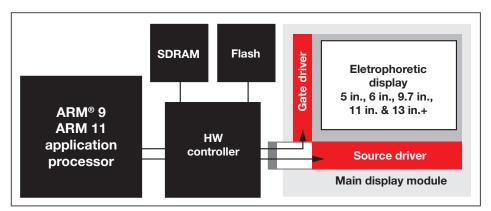

- Cost reduction by design and R&D savings:
 - Multiple product development (concept/ architecture-phase savings)
 - Assurance of high-quality devices and high-quantity deliveries
 - Software investments can be reused between products
 - Retain the benefits of previous development experiences and optimizations
 - Ready vehicle for fast time-to-market product development

At the system level:

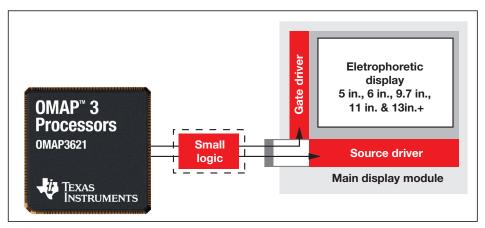

TI has been the first to introduce a more optimized and high-performing architecture to enable wide adoption of e-readers while improving the overall user experience.

Compared to the first-generation architecture, TI's new architecture enables:

- More flexibility
- Lower e-BOM cost
- Higher performance
- Slim and lightweight designs

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
