Build Innovative, Reliable and Cost-Effective Automotive Lighting Systems

Introduction
Automotive exterior LED lighting products from Texas Instruments (TI) help you build innovative, reliable, cost-effective exterior automotive lighting systems that exceed today’s stringent requirements. Our highly efficient LED solutions extend the life of your lighting system, enable greater driver and pedestrian safety, and enhance the driver experience.

From headlights to taillights and everything in between, TI delivers reliable, scalable and power-efficient linear and switching solutions for simple and complex systems.

Single-Stage Front Lighting Overview

Design Long Lasting LED Lights Without Modifying the BCM

Automotive front lights are evolving from incandescent high-intensity discharge (HID) based lamps into highly intelligent and adaptive luminaires that automatically adjust to dynamic environmental, roadway and traffic conditions.

Common implementations today are a mixture of both traditional filament-based lamps and LED light sources with LEDs typically being utilized on mid- and high-end models or trim levels.

TI’s flexible portfolio of single/dual channel LED drivers and development tools help you in the design of long lasting LED light sources for replacement of incandescent lamps without expensive modification to existing Body Control Modules (BCMs).

Flexible, Module Single Power Conversion Stage Architecture

LEDs are not only a long-lasting, energy efficient sources of light, they also provide OEMs with creative new ways to combine lighting function with innovative styling. TI’s flexible, single-stage LED driver products are highly configurable and modular point-of-load solutions. They simplify matching the dynamic voltage range of modern automotive batteries to strings ranging from 1 to “n” LEDs in length.

Available in single and dual-channel options, TI’s single-stage LED drivers also can be configured to support all common topologies. Diagnostic and protection features ensure reliable operation under fault conditions.

Flexible Portfolio Meets Your Needs

TI Advantages
- Easy to mix LED and conventional light sources without ECU modification
- Flexible driver solutions for strings of 1 to “n” LEDs
- Low BOM cost
 Benefit From a Full LED Electronics Control Unit Approach

Vehicles adopting LEDs for all exterior lighting functions can benefit from a full LED ECU platform approach based upon a dual power conversion stage architecture consisting of a boost voltage source and buck current regulators for each lighting function.

Buck LED drivers from Texas Instruments are ideal current sources and offer the best immunity to common fault conditions such as short circuits to chassis and battery. TI's boost regulators produce stable DC input supplies for buck current source operation.

Dual-Stage Front Lighting Overview

* TI Advantages
  - Boost removes VBATT fluctuations
  - Buck LED drivers have best immunity to LED open or short faults
  - Scalable ECU platform for static or adaptive front lighting

## Adaptive Front Lighting (AFL) Gives You Optimal Illumination

Traditional high-/low beam High-Intensity Discharge (HID) lamps consist of a bulb and reflector to create a predefined distribution of light. In most vehicles, the only control for these headlamps is ON or OFF. A relative few can alter the beam direction by rudimentary mechanical means based on steering wheel position. These systems are subject to wear out mechanisms and long-term reliability concerns as they rely on motors, actuators and baffles to physically steer the headlamps.

Unlike incandescent bulbs, LEDs are point sources of light. If they are creatively arranged and paired with a suitable control method light is easily steered without moving parts. TI’s solid-state approach is a more reliable, dynamic and scalable means of solving designers AFL challenges. Using speed, steering wheel position, navigation system inputs, and front-facing cameras for vehicle and object detection, TI’s LED Matrix Manager for AFL enables vehicles to automatically adjust the distribution and intensity of light emitted from the high/low beams without physical movement of the headlamps.

This capability provides always optimal roadway, shoulder and median illumination free of common high-beam glare. The result is greater long distance visibility at highway speeds, enhanced side visibility when cornering, and providing the driver with an obvious over-illuminated visual warning of roadway debris and potential animal or pedestrian hazards.

Simplify Your Automotive Exterior Lighting Design with the TPS92661-Q1

LED drivers from TI provide the ultimate flexibility for enhancing automobile styling and safety. The TPS92661-Q1, LED Matrix Manager IC, is a compact solution with LED pixel-level brightness control and diagnostics ideally suited for adaptive high/low beams, sequential turn indicators and daytime running lights. This solid-state approach requires no moving parts, increasing system reliability.

**TI Advantages**
- Solid state – no moving parts required
- Controls up to 96 LEDs for headlamp beam forming and directional control
- 10-bit pulse-width modulated (PWM) LED brightness control for pixel-level light intensity adjustment
- LED open/short fault diagnostics
- Easy integration into dual-stage ECU

Get Integrated Solutions with Full Diagnostic and Thermal Management Features

TI's Linear LED driver portfolio consists of reliable, low-EMI solutions for rear stop, turn and backup lighting. Integrated DC/DC with linear LED drive is suitable for long LED strings where the LED forward voltage is greater than the minimum battery voltage. TI's Linear solutions offer the leading features of full diagnostic (e.g., LED open, short and single LED short) and thermal management.

**Single-Channel Linear**
- Ideal for few LED pixels, high-current designs
- Simple building block, repeat circuit for additional channels

**Multi-Channel Linear**
- Best for designs using many parallel, low-current LEDs
- Simplified fault reporting as single IC controls multiple channels

**Boost + Linear**
- DC/DC (boost, SEPIC) buffers LED strings from battery voltage variation under cold/warm crank
- Suitable for longer series-connected LEDs

Design Resources, References and Support

TI provides many resources for your external lighting needs to help you design systems faster, including TI Designs and guides. We also offer worldwide support to ensure your questions are answered fast.

WEBENCH® Automotive

TI’s automotive WEBENCH designs are another way to get your applications to market faster. The design tool helps you:

• SELECT the right automotive-grade parts for your system requirements
• CREATE a design in seconds and visually optimize results for efficiency, size and cost
• ANALYZE your design by running electrical and thermal analysis right in the tool
• EXPORT your optimized design directly into your CAD program

**Important Notice:** The products and services of Texas Instruments Incorporated and its subsidiaries described herein are sold subject to TI’s standard terms and conditions of sale. Customers are advised to obtain the most current and complete information about TI products and services before placing orders. TI assumes no liability for applications assistance, customer’s applications or product designs, software performance, or infringement of patents. The publication of information regarding any other company’s products or services does not constitute TI’s approval, warranty or endorsement thereof.

A021014

The platform bar and E2E are trademarks and WEBENCH is a registered trademark of Texas Instruments. All other trademarks are the property of their respective owners.
**IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have not been so designated is solely at the Buyer’s risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use. TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
