

# 1.8-V MICROPPOWER CMOS OPERATIONAL AMPLIFIER ZERO-DRIFT SERIES

Check for Samples: [OPA2333-HT](#)

## FEATURES

- Low Offset Voltage: 26  $\mu\text{V}$  (Max)
- 0.01-Hz to 10-Hz Noise: 1.5  $\mu\text{V}_{\text{PP}}$
- Quiescent Current: 50  $\mu\text{A}$
- Single-Supply Operation
- Supply Voltage: 1.8 V to 5.5 V
- Rail-to-Rail Input/Output

## APPLICATIONS

- Down-Hole Drilling
- High Temperature Environments

## SUPPORTS EXTREME TEMPERATURE APPLICATIONS

- Controlled Baseline
- One Assembly/Test Site
- One Fabrication Site
- Available in Extreme ( $-55^{\circ}\text{C}/210^{\circ}\text{C}$ ) Temperature Range<sup>(1)</sup>
- Extended Product Life Cycle
- Extended Product-Change Notification
- Product Traceability
- Texas Instruments' high temperature products utilize highly optimized silicon (die) solutions with design and process enhancements to maximize performance over extended temperatures.

## DESCRIPTION/ORDERING INFORMATION<sup>(2)</sup>

The OPA2333 series of CMOS operational amplifiers uses a proprietary auto-calibration technique to simultaneously provide very low offset voltage and near-zero drift over time and temperature. These miniature, high-precision, low-quiescent-current amplifiers offer high-impedance inputs that have a common-mode range 100 mV beyond the rails, and rail-to-rail output that swings within 150 mV of the rails. Single or dual supplies as low as 1.8 V ( $\pm 0.9$  V) and up to 5.5 V ( $\pm 2.75$  V) may be used. They are optimized for low-voltage single-supply operation.

The OPA2333 family offers excellent common-mode rejection ratio (CMRR) without the crossover associated with traditional complementary input stages. This design results in superior performance for driving analog-to-digital converters (ADCs) without degradation of differential linearity.

(2) Refer to Electrical Characteristics for performance degradation over temperature.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

**Table 1. ORDERING INFORMATION<sup>(1)</sup>**

| TA             | PACKAGE <sup>(2)</sup> | ORDERABLE PART NUMBER | TOP-SIDE MARKING |
|----------------|------------------------|-----------------------|------------------|
| –55°C to 210°C | KGD                    | OPA2333SKGD1          | NA               |
|                | JD                     | OPA2333SJD            | OPA2333SJD       |
|                | HKJ                    | OPA2333SHKJ           | OPA2333SHKJ      |
| –55°C to 175°C | D                      | OPA2333HD             | O2333H           |

## THERMAL CHARACTERISTICS FOR JD PACKAGE

over operating free-air temperature range (unless otherwise noted)

| PARAMETER     |   | TEST CONDITIONS                          | MIN | TYP  | MAX | UNIT |
|---------------|---|--|-----|------|-----|------|
| $\theta_{JA}$ | Junction-to-ambient thermal resistance <sup>(1)</sup> | High-K board <sup>(2)</sup> , no airflow |     | 64.9 |     | °C/W |
|               |   | No airflow                               |     | 83.4 |     |      |
| $\theta_{JB}$ | Junction-to-board thermal resistance                  | High-K board without underfill           |     | 27.9 |     | °C/W |
| $\theta_{JC}$ | Junction-to-case thermal resistance                   |  |     | 6.49 |     | °C/W |

- (1) The intent of  $\theta_{JA}$  specification is solely for a thermal performance comparison of one package to another in a standardized environment. This methodology is not meant to and will not predict the performance of a package in an application-specific environment.  
 (2) JED51-7, high effective thermal conductivity test board for leaded surface mount packages

## THERMAL CHARACTERISTICS FOR HKJ PACKAGE

over operating free-air temperature range (unless otherwise noted)

| PARAMETER     |  | MIN | TYP | MAX  | UNIT |
|---------------|--|-----|-----|------|------|
| $\theta_{JC}$ | Junction-to-case thermal resistance (to bottom of case)                          |     |     | 5.7  | °C/W |
|               | Junction-to-case thermal resistance (to top of case lid - as if formed dead bug) |     |     | 13.7 |      |

## THERMAL CHARACTERISTICS FOR D PACKAGE

over operating free-air temperature range (unless otherwise noted)

| PARAMETER     |   | MIN | TYP | MAX  | UNIT |
|---------------|---|-----|-----|------|------|
| $\theta_{JC}$ | Junction-to-case thermal resistance (to bottom of case) |     |     | 39.4 | °C/W |

## Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

|  |                            | MIN  | MAX        | UNIT |
|--|----------------------------|------|------------|------|
| Supply voltage                                 |                            |      | 7          | V    |
| Signal input terminals, voltage <sup>(2)</sup> |                            | -0.3 | (V+) + 0.3 | V    |
| Output short circuit <sup>(3)</sup>            |                            |      | Continuous |      |
| Operating temperature range                    | JD, HKJ packages           | -55  | 210        | °C   |
|  | D package                  | -55  | 175        |      |
| Junction temperature                           | JD, HKJ packages           |      | 210        | °C   |
|  | D package                  |      | 175        |      |
| ESD rating                                     | Human-Body Model (HBM)     |      | 4000       | V    |
|  | Charged-Device Model (CDM) |      | 1000       |      |

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.  
 (2) Input terminals are diode clamped to the power-supply rails. Input signals that can swing more than 0.3 V beyond the supply rails should be current limited to 10 mA or less.  
 (3) Short circuit to ground, one amplifier per package.

**Electrical Characteristics:  $V_S = 1.8\text{ V to }5.5\text{ V}$** 

Boldface limits apply over the specified temperature range,  $T_A = -55^\circ\text{C to }210^\circ\text{C}$ . At  $T_A = 25^\circ\text{C}$ ,  $R_L = 10\text{ k}\Omega$  connected to  $V_S/2$ ,  $V_{CM} = V_S/2$ , and  $V_{OUT} = V_S/2$  (unless otherwise noted).

| PARAMETER  | TEST CONDITIONS | $T_A = -55^\circ\text{C to }125^\circ\text{C}$                                 |     |           | $T_A = 175^\circ\text{C}^{(1)}$ |               |                              | $T_A = 210^\circ\text{C}^{(2)}$ |                              |                | UNIT                         |
|--|-----------------|--|-----|-----------|---------------------------------|---------------|------------------------------|---------------------------------|------------------------------|----------------|------------------------------|

## APPLICATION INFORMATION<sup>(1)</sup>

The OPA2333 is unity-gain stable and free from unexpected output phase reversal. It uses a proprietary auto-calibration technique to provide low offset voltage and very low drift over time and temperature. For lowest offset voltage and precision performance, circuit layout and mechanical conditions should be optimized. Avoid temperature gradients that create thermoelectric (Seebeck) effects in the thermocouple junctions formed from connecting dissimilar conductors. These thermally-generated potentials can be made to cancel by ensuring they are equal on both input terminals. Other layout and design considerations include:

- Use low thermoelectric-coefficient conditions (avoid dissimilar metals)
- Thermally isolate components from power supplies or other heat sources
- Shield op amp and input circuitry from air currents, such as cooling fans

Following these guidelines will reduce the likelihood of junctions being at different temperatures, which can cause thermoelectric voltages of 0.1  $\mu\text{V}/^\circ\text{C}$  or higher, depending on materials used.

### Operating Voltage

The OPA2333 op amp operates over a power-supply range of 1.8 V to 5.5 V ( $\pm 0.9$  V to  $\pm 2.75$  V). Supply voltages higher than 7 V (absolute maximum) can permanently damage the device. Parameters that vary over supply voltage or temperature are shown in the Typical Characteristics section of this data sheet.

### Input Voltage

The OPA2333 input common-mode voltage range extends 0.1 V beyond the supply rails. The OPA2333 is designed to cover the full range without the troublesome transition region found in some other rail-to-rail amplifiers.

Normally, input bias current is about 70 pA; however, input voltages exceeding the power supplies can cause excessive current to flow into or out of the input pins. Momentary voltages greater than the power supply can be tolerated if the input current is limited to 10 mA. This limitation is easily accomplished with an input resistor (see [Figure 2](#)).

**Figure 2. Input Current Protection**

### Internal Offset Correction

The OPA2333 op amp uses an auto-calibration technique with a time-continuous 350-kHz op amp in the signal path. This amplifier is zero corrected every 8  $\mu\text{s}$  using a proprietary technique. Upon power up, the amplifier requires approximately 100  $\mu\text{s}$  to achieve specified  $V_{\text{OS}}$  accuracy. This design has no aliasing or flicker noise.

(1) At  $T_A = 25^\circ\text{C}$  (unless otherwise noted).

## Achieving Output Swing to the Op Amp Negative Rail

Some applications require output voltage swings from 0 V to a positive full-scale voltage (such as 2.5 V) with excellent accuracy. With most single-supply op amps, problems arise when the output signal approaches 0 V, near the lower output swing limit of a single-supply op amp. A good single-supply op amp may swing close to single-supply ground, but will not reach ground. The output of the OPA2333 can be made to swing to ground, or slightly below, on a single-supply power source. To do so requires the use of another resistor and an additional, more negative, power supply than the op amp negative supply. A pulldown resistor may be connected between the output and the additional negative supply to pull the output down below the value that the output would otherwise achieve (see [Figure 3](#)).

**Figure 3.  $V_{OUT}$  Range to Ground**

The OPA2333 has an output stage that allows the output voltage to be pulled to its negative supply rail, or slightly below, using the technique previously described. This technique only works with some types of output stages. The OPA2333 has been characterized to perform with this technique; however, the recommended resistor value is approximately 20 k $\Omega$ . Note that this configuration will increase the current consumption by several hundreds of microamps. Accuracy is excellent down to 0 V and as low as -2 mV. Limiting and nonlinearity occurs below -2 mV, but excellent accuracy returns as the output is again driven above -2 mV. Lowering the resistance of the pulldown resistor allows the op amp to swing even further below the negative rail. Resistances as low as 10 k $\Omega$  can be used to achieve excellent accuracy down to -10 mV.

## General Layout Guidelines

Attention to good layout practices is always recommended. Keep traces short and, when possible, use a printed circuit board (PCB) ground plane with surface-mount components placed as close to the device pins as possible. Place a 0.1- $\mu$ F capacitor closely across the supply pins. These guidelines should be applied throughout the analog circuit to improve performance and provide benefits, such as reducing the electromagnetic interference (EMI) susceptibility.

Operational amplifiers vary in their susceptibility to radio frequency interference (RFI). RFI can generally be identified as a variation in offset voltage or dc signal levels with changes in the interfering RF signal. The OPA2333 has been specifically designed to minimize susceptibility to RFI and demonstrates remarkably low sensitivity compared to previous-generation devices. Strong RF fields may still cause varying offset levels.

Figure 4. Temperature Measurement

Figure 5 shows the basic configuration for a bridge amplifier.

Figure 5. Single Op-Amp Bridge Amplifier

A low-side current shunt monitor is shown in Figure 6. R<sub>N</sub> are operational resistors used to isolate the ADS1100 from the noise of the digital I<sup>2</sup>C bus. Since the ADS1100 is a 16-bit converter, a precise reference is essential for maximum accuracy. If absolute accuracy is not required, and the 5-V power supply is sufficiently stable, the REF3130 may be omitted.

<sup>(1)</sup> The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

<sup>(2)</sup> Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

<sup>(3)</sup> MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF OPA2333-HT :**

● Catalog: [OPA2333](#)

● Automotive: [OPA2333-Q1](#)

NOTE: Qualified Version Definitions:

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

JD (R-CDIP-T\*\*)

CERAMIC SIDE-BRAZE DUAL-IN-LINE PACKAGE

20 PINS SHOWN

4040086-2/F 07/03

- NOTES:
- A. All linear dimensions are in inches (millimeters).
  - B. This drawing is subject to change without notice.
  - C. This package is hermetically sealed with a metal lid.
  - D. The terminals are gold plated.
  - E. Falls within MIL STD 1835 CDIP2 - T8, T14, T16, T18, T20 and T24 respectively.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
