

DS34C86T Quad CMOS Differential Line Receiver

Check for Samples: [DS34C86T](#)

FEATURES

- **CMOS Design for Low Power**
- **$\pm 0.2\text{V}$ Sensitivity Over the Input Common Mode Voltage Range**
- **Typical Propagation Delays: 19 ns**
- **Typical Input Hysteresis: 60 mV**
- **Inputs Won't Load Line when $V_{CC} = 0\text{V}$**
- **Meets the Requirements of EIA Standard RS-422**
- **TRI-STATE Outputs for System Bus Compatibility**
- **Available in Surface Mount**
- **Open Input Failsafe Feature, Output High for Open Input**

DESCRIPTION

The DS34C86T is a quad differential line receiver designed to meet the RS-422, RS-423, and Federal Standards 1020 and 1030 for balanced and unbalanced digital data transmission, while retaining the low power characteristics of CMOS.

The DS34C86T has an input sensitivity of 200 mV over the common mode input voltage range of $\pm 7\text{V}$. Hysteresis is provided to improve noise margin and discourage output instability for slowly changing input waveforms.

The DS34C86T features internal pull-up and pull-down resistors which prevent output oscillation on unused channels.

Separate enable pins allow independent control of receiver pairs. The TRI-STATE outputs have 6 mA source and sink capability. The DS34C86T is pin compatible with the DS3486.

This device does not meet 2000V ESD rating ⁽¹⁾	

(1) ESD Rating; HBM (1.5k Ω , 100 pF) Inputs $\geq 2000V$ All other pins $\geq 1000V$ EIAJ (0 Ω , 200 pF) $\geq 350V$

(2) Unless otherwise specified, all voltages are referenced to ground.

(3) Absolute Maximum Ratings are values beyond which the safety of the device cannot be specified. They are not meant to imply that the device should be operated at these limits. The "Electrical Characteristics" provide conditions for actual device operation.

(4) If Military/Aerospace specified devices are required, please contact the TI Sales Office/Distributors for availability and specifications.

(5) Ratings apply to ambient temperature at $25^{\circ}C$. Above this temperature derate NFG0016E Package 13.16 mW/ $^{\circ}C$, and D0016A Package 9.52 mW/ $^{\circ}C$.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
