

- Temperature Compensated
- Programmable Output Voltage
- Low Output Resistance
- Low Output Noise
- Sink Capability up to 100 mA

## LP PACKAGE (TOP VIEW)

## description/ordering information

The TL430 is a 3-terminal adjustable shunt regulator, featuring excellent temperature stability, wide operating current range, and low output noise. The output voltage can be set by two external resistors to any desired value between 3 V and 30 V. The TL430 can replace Zener diodes in many applications, providing improved performance.

The TL430C is characterized for operation from 0°C to 70°C.

## ORDERING INFORMATION

T <sub>A</sub>	PACKAGE†	ORDERABLE PART NUMBER	TOP-SIDE MARKING
0°C to 70°C	TO-226 / TO-92 (LP)	Bulk of 1000	TL430CLP
		Reel of 2000	TL430CLPR
			TL430C

† Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at [www.ti.com/sc/package](http://www.ti.com/sc/package).

## symbol

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## ADJUSTABLE SHUNT REGULATORS

SLVS050D – JUNE 1976 – REVISED JANUARY 2005

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)<sup>†</sup>

Regulator voltage (see Note 1)	30 V
Continuous regulator current	150 mA
Package thermal impedance, $\theta_{JA}$ (see Notes 2 and 3)	140°C/W
Operating virtual junction temperature, $T_J$	150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C
Storage temperature range, $T_{stg}$	–65°C to 150°C

<sup>†</sup> Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltage values are with respect to the anode terminal.

2. Maximum power dissipation is a function of  $T_J(\max)$ ,  $\theta_{JA}$ , and  $T_A$ . The maximum allowable power dissipation at any allowable ambient temperature is  $P_D = (T_J(\max) - T_A)/\theta_{JA}$ . Operating at the absolute maximum  $T_J$  of 150°C can impact reliability.

3. The package thermal impedance is calculated in accordance with JESD 51-7.

### recommended operating conditions

	MIN	MAX	UNIT
$V_Z$ Regulator voltage	$V_{ref}$	30	V
$I_Z$ Regulator current	2	100	mA
$T_A$ Operating free-air temperature range	TL430C		0 70 °C

### electrical characteristics over recommended operating conditions, $T_A = 25^\circ\text{C}$ (unless otherwise noted)

PARAMETER		TEST FIGURE	TEST CONDITIONS		TL430C			UNIT
					MIN	TYP	MAX	
V <sub>I(ref)</sub>	Reference input voltage	1	V <sub>Z</sub> = V <sub>I(ref)</sub> , I <sub>Z</sub> = 10 mA		2.5	2.75	3	V
αV <sub>I(ref)</sub>	Temperature coefficient of reference input voltage	1	V <sub>Z</sub> = V <sub>I(ref)</sub> , I <sub>Z</sub> = 10 mA, T <sub>A</sub> = 0°C to 70°C		120			ppm/°C
I <sub>I(ref)</sub>	Reference input current	2	I <sub>Z</sub> = 10 mA, R1 = 10 kΩ, R2 = ∞		3 10			μA
I <sub>ZK</sub>	Regulator current near lower knee of regulation range	1	V <sub>Z</sub> = V <sub>I(ref)</sub>		0.5 2			mA
I <sub>ZK</sub>	Regulator current at maximum limit of regulation range	1	V <sub>Z</sub> = V <sub>I(ref)</sub>		50			mA
		2	V <sub>Z</sub> = 5 V to 30 V, See Note 4		100			
r <sub>z</sub>	Differential regulator resistance (see Note 5)	1	V <sub>Z</sub> = V <sub>I(ref)</sub> , ΔI <sub>Z</sub> = (52 – 2) mA		1.5 3			Ω
V <sub>n</sub>	Noise voltage	2	f = 0.1 Hz to 10 Hz	V <sub>Z</sub> = 3 V	50			μV
				V <sub>Z</sub> = 12 V	200			
				V <sub>Z</sub> = 30 V	650			

NOTES: 4. The average power dissipation,  $V_Z \cdot I_Z \cdot \text{duty cycle}$ , must not exceed the maximum continuous rating in any 10-ms interval.

5. The regulator resistance for  $V_Z > V_{I(ref)}$ ,  $r_z$ , is given by:

$$r_z' = r_z \left( 1 + \frac{R_1}{R_2} \right)$$

## PARAMETER MEASUREMENT INFORMATION

**Figure 1. Test Circuit for  $V_Z = V_{I(ref)}$**

$$V_Z = V_{I(ref)} \left( 1 + \frac{R1}{R2} \right) + I_{I(ref)} \times R1$$

## PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
TL430CLP	Active	Production	TO-92 (LP)   3	1000   BULK	Yes	SN	N/A for Pkg Type	0 to 70	TL430C
TL430CLP.A	Active	Production	TO-92 (LP)   3	1000   BULK	Yes	SN	N/A for Pkg Type	0 to 70	TL430C

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
