TS321 低功耗单路运算放大器

1 特性

- 宽电源范围
  - 3V 至 30V 的单电源供电范围
  - ±1.5 V 至 ±15 V 的双电源供电范围
- 从 0V 至 3.5V（最低值）(V_{CC} = 5 V) 的大输出电压摆幅
- 低电源电流：500μA（典型值）
- 低输入偏置电流：20nA（典型值）
- 与高容式负载一起工作时保持稳定

2 应用

- 台式计算机
- HVAC：采暖、通风和空调
- 便携式媒体播放器
- 冰箱
- 洗衣机：高端和低端

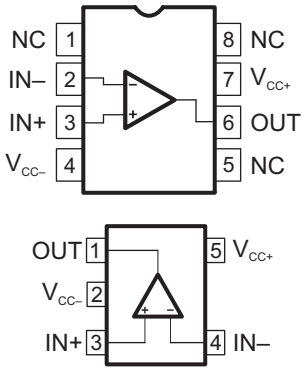

3 说明

TS321 是一种双极运算放大器，适用于注重节省空间的成本敏感型 应用 。

器件信息(1)

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

			MIN	MAX	UNIT
	Supply voltage, V_{CC}	Single supply		32	V
		Dual supplies		±16	
	Differential input voltage(2), V_{ID}			±32	V
	Input voltage range (3), V_I		–0.3	32	V
	Input current, I_{IK}			50	mA
	Duration of output short circuit to ground, t_{short}			Unlimited	
	Operating virtual junction temperature, T_J			150	°C
	Storage temperature, T_{stg}		–65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) Differential voltages are at IN+ with respect to IN–.
(3) Input voltages are at IN with respect to $V_{CC–}$.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±2500	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±1500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

			MIN	MAX	UNIT
V_{CC}	Supply voltage	Single supply	3	30	V
		Dual supply	±1.5	±15	
T_A	Operating free-air temperature		–40	125	°C

6.4 Thermal Information: TS321

THERMAL METRIC(1) (2)(3)		TS321		UNIT
		D (SOIC)	DBV (SOT-23)	
		5 PINS	5 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	97	206	°C/W

(1) For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report.
(2) Maximum power dissipation is a function of TJ(max), qJA, and T_A. The maximum allowable power dissipation at any allowable ambient temperature is PD = [TJ(max) – TA] / qJA. Selecting the maximum of 150°C can effect reliability.
(3) The package thermal impedance is calculated in accordance with JESD 51-7.

GBP	Gain bandwidth product	V_{CC} = 30 V, V_I = 10 mV, R_L = 2 kΩ f = 100 kHz, C_L = 100 pF T_A = 25°C			0.8		MHz
SR	Slew rate	V_{CC} = 15 V, V_I = 0.5 V to 3 V, R_L = 2 kΩ, C_L = 100 pF, unity gain, T_A = 25°C			0.4		V/µs
φ_m	Phase margin	T_A = 25°C			60		°
CMRR	Common-mode rejection ratio	R_S ≤ 10 kΩ T_A = 25°C		65	85		dB
I_{SOURCE}	Output source current	V_{CC} = 15 V, V_O = 2 V, V_{ID} = 1 V T_A = 25°C		20	40		mA
I_{SINK}	Output sink current	V_{CC} = 15 V, V_{ID} = 1 V V_O = 2 V T_A = 25°C		10	20		mA
		V_{CC} = 15 V, V_{ID} = 1 V V_O = 0.2 V T_A = 25°C		12	50		µA
I_O	Short-circuit to GND	V_{CC} = 15 V, T_A = 25°C			40	60	mA
SVR	Supply-voltage rejection ratio	V_{CC} = 5 V to 30 V, T_A = 25°C		65	110		dB
I_{CC}	Total supply current	V_{CC} = 5 V T_A = 25°C, no load			500	800	µA
		V_{CC} = 30 V T_A = 25°C, no load			600	900	
		V_{CC} = 5 V T_A = full range, no load			600	900	
		V_{CC} = 30 V T_A = full range, no load				1000	
THD	Total harmonic distortion	V_{CC} = 30 V, V_O = 2 V_{pp}, A_V = 20 dB R_L = 2 k, f = 1 kHz, C_L = 100 pF, T_A = 25°C			0.015%		

(1) The direction of the input current is out of the device. This current essentially is constant, independent of the state of the output, so no loading change exists on the input lines.
(2) The input common-mode voltage of either input signal should not be allowed to go negative by more than 0.3 V. The upper end of the common-mode voltage range is V_{CC+} – 1.5 V, but either or both inputs can go to 32 V without damage.

7 Detailed Description

7.1 Overview

The TS321 is a single-channel operational amplifier. The device can handle a single supply between 3 V and 30 V or a dual-supply between ±1.5 V and ±15 V. Available in the small SOT-23 package, the TS321 is great for saving space in any application.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Operating Voltage

The TS321 can be powered from a single supply between 3 V and 30 V or a dual-supply between ±1.5 V and ±15 V.

7.3.2 Gain Bandwidth Product

Gain bandwidth product is found by multiplying a measured bandwidth of the amplifier by the gain at which that bandwidth was measured. The TS321 has a gain bandwidth of 0.8 MHz.

7.3.3 Slew Rate

The slew rate is the rate at which an operational amplifier can change the output when there is a change on the input. The TS321 has a 0.4-V/μs slew rate.

版权 © 2005–2018, Texas Instruments Incorporated

Feature Description (接下页)

7.3.4 Input Common-Mode Range

The valid common-mode range is from device ground pin to VCC – 1.5 V (VCC – 2 V across temperature). Inputs may exceed VCC up to the maximum VCC without device damage. At least one input must be in the valid input common-mode range for output to be correct phase. If both inputs exceed valid range then output phase is undefined. If either input is less than –0.3 V then input current must be limited to 1 mA and output phase is undefined.

7.3.5 Stability With High Capacitive Loads

Operational amplifiers have reduced phase margin when there is a direct capacitance on the output. The stability is affected most when the amplifier is set to unity gain. Small signal response to a step input of 100 mV reveals the loop stability with a range of capacitors. See SLVA381 to correlate response waveform to phase margin. The responses at 1 nF or less indicate acceptable phase margin. The responses at 1 uF and above indicate good phase margin.

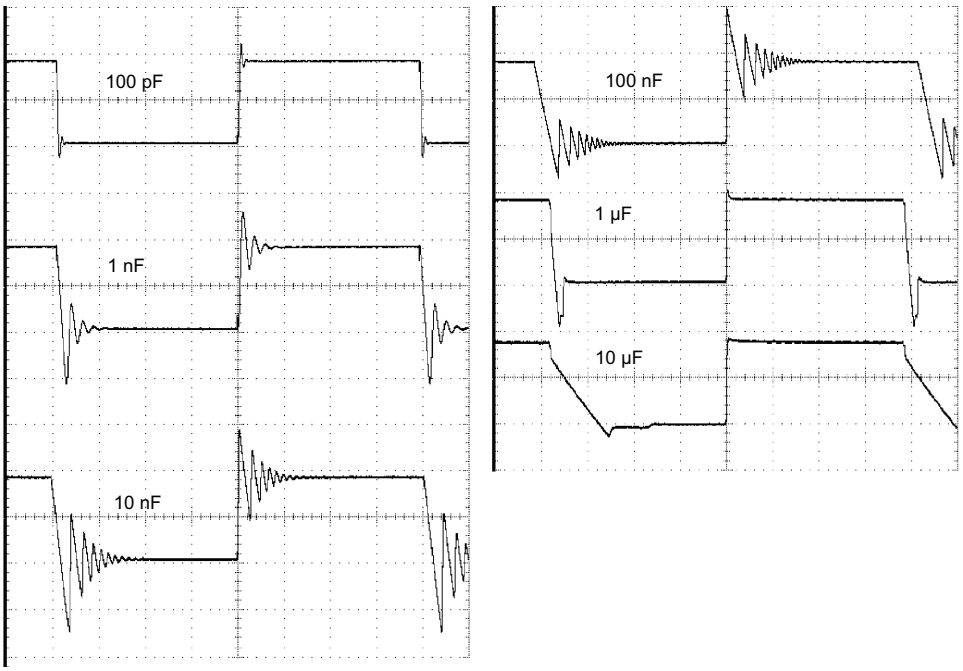

图 7. Small-Signal Response

7.4 Device Functional Modes

The TS321 is powered on when the supply is connected. This device can operate as a single-supply operational amplifier or dual-supply amplifier depending on the application.

8 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TS321 operational amplifier is useful in a wide range of signal conditioning applications. Inputs can be powered before VCC for flexibility in multiple supply circuits.

8.2 Typical Application

A typical application for an operational amplifier in an inverting amplifier. This amplifier takes a positive voltage on the input, and makes the voltage a negative voltage of the same magnitude. In the same manner, the amplifier makes negative voltages positive.

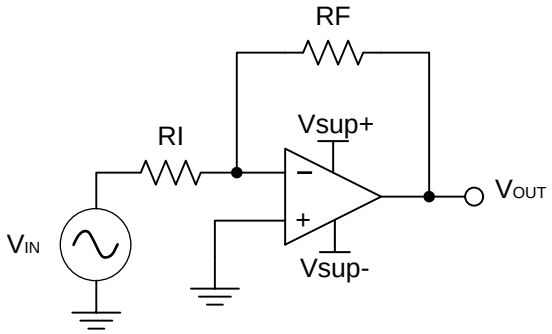

图 8. Typical Application Schematic

8.2.1 Design Requirements

The supply voltage must be selected such that the supply voltage is larger than the input voltage range and output range. For instance, this application scales a signal of ±0.5 V to ±1.8 V. Setting the supply at ±12 V is sufficient to accommodate this application.

8.2.2 Detailed Design Procedure

Determine the gain required by the inverting amplifier:

$$A_V = \frac{VOUT}{VIN} \quad (1)$$

$$A_V = \frac{1.8}{-0.5} = -3.6 \quad (2)$$

Once the desired gain is determined, select a value for RI or RF. Selecting a value in the kilohm range is desirable because the amplifier circuit uses currents in the milliamp range. This ensures the part does not draw too much current. This example selects 10 kΩ for RI which means 36 kΩ is be used for RF. This is determined by 公式 3.

$$A_V = -\frac{RF}{RI} \quad (3)$$

Typical Application (接下页)

8.2.3 Application Curve

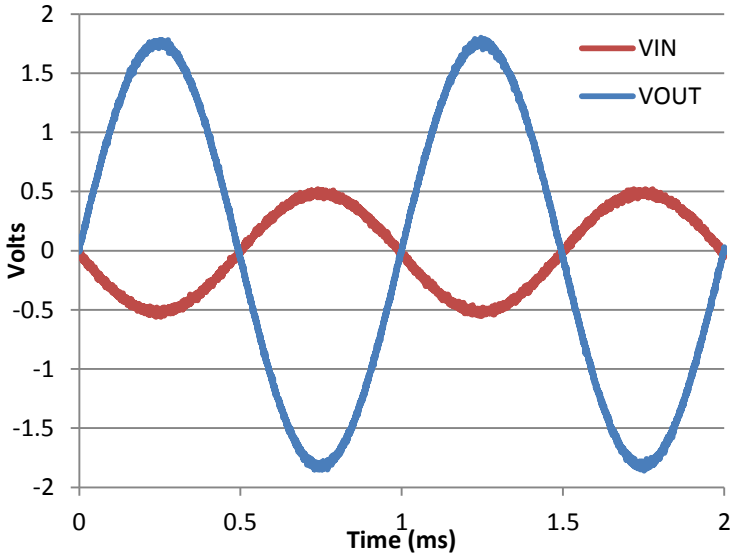

图 9. Input and Output Voltages of the Inverting Amplifier

9 Power Supply Recommendations

The TS321 is specified to operate between 3 V and 30 V or a dual supply between ±1.5 V and ±15 V.

CAUTION

Supply voltages larger than 32 V for a single supply, or outside the range of ±16 V for a dual supply can permanently damage the device (see the *Absolute Maximum Ratings*).

Place 0.1-μF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high impedance power supplies. For more detailed information on bypass capacitor placement, see the *Layout* section.

10 Layout

10.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low impedance power sources local to the analog circuitry.
  - Connect low-ESR, 0.1-μF ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single supply applications.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current. For more detailed information, see SLOA089.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If it is not possible to keep them separate, it is much better to cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping RF and RG close to the inverting input minimizes parasitic capacitance, as shown in *Layout Example*.
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

TI“按原样”提供技术和可靠性数据（包括数据表）、设计资源（包括参考设计）、应用或其他设计建议、网络工具、安全信息和其他资源，不保证没有瑕疵且不做出任何明示或暗示的担保，包括但不限于对适销性、与某特定用途的适用性或不侵犯任何第三方知识产权的暗示担保。

这些资源可供使用 TI 产品进行设计的熟练开发人员使用。您将自行承担以下全部责任：(1) 针对您的应用选择合适的 TI 产品，(2) 设计、验证并测试您的应用，(3) 确保您的应用满足相应标准以及任何其他安全、安保法规或其他要求。

这些资源如有变更，恕不另行通知。TI 授权您仅可将这些资源用于研发本资源所述的 TI 产品的相关应用。严禁以其他方式对这些资源进行复制或展示。您无权使用任何其他 TI 知识产权或任何第三方知识产权。对于因您对这些资源的使用而对 TI 及其代表造成的任何索赔、损害、成本、损失和债务，您将全额赔偿，TI 对此概不负责。

TI 提供的产品受 TI 销售条款)、TI 通用质量指南 或 ti.com 上其他适用条款或 TI 产品随附的其他适用条款的约束。TI 提供这些资源并不会扩展或以其他方式更改 TI 针对 TI 产品发布的适用的担保或担保免责声明。 除非德州仪器 (TI) 明确将某产品指定为定制产品或客户特定产品，否则其产品均为按确定价格收入目录的标准通用器件。

TI 反对并拒绝您可能提出的任何其他或不同的条款。
