TS3A4751 0.9Ω 低电压、单电源、4 通道 SPST 模拟开关

1 特性

- 低通态电阻 (R_{ON})
  - 最大值 0.9Ω（电源电压为 3V）
  - 最大值 1.5Ω（电源电压为 1.8V）
- R_{ON} 稳定性：最大值 0.4Ω（电压为 3V）
- R_{ON} 通道匹配
  - 最大值 0.05Ω（电源电压为 3V）
  - 最大值 0.15Ω（电源电压为 1.8V）
- 1.6V 至 3.6V 单电源运行
- 兼容 1.8V CMOS 逻辑（电源电压为 3V）
- 高电流处理能力（100mA 持续电流）
- 快速开关：t_{ON} = 5ns，t_{OFF} = 4ns
- 支持数字和模拟 应用
- ESD 保护性能超出 JESD-22 标准
  - ±4000V 人体放电模型 (A114-A)
  - 300V 机器模型 (A115-A)
  - ±1000V 组件充电模式 (C101)

2 应用

- 电源布线
- 电池供电型系统
- 音频和视频信号路由
- 低压数据采集系统
- 通信电路
- PCMCIA 卡
- 手机
- 调制解调器
- 硬盘

3 说明

TS3A4751 器件是一款双向、4 通道、常开 (NO) 单刀单掷 (SPST) 模拟开关，由单个 1.6V 至 3.6V 电源供电。此器件具有快速开关速度，可处理轨至轨模拟信号，并且静态功耗非常低。

当使用 3V 电源时，该数字输入兼容 1.8V CMOS。

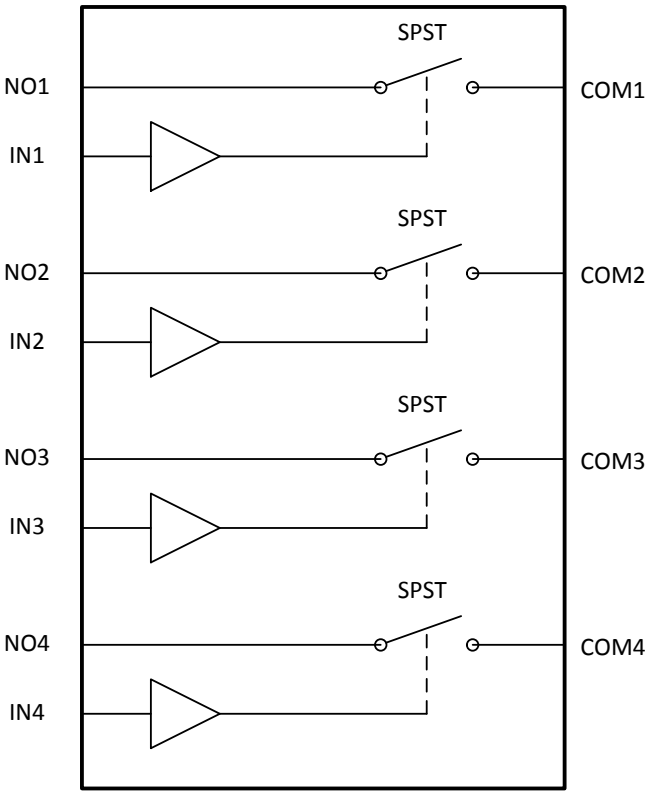

TS3A4751 器件具有四个常开 (NO) 开关。TS3A4751 采用 14 引脚薄型紧缩小外形封装 (TSSOP)，以及节省空间的 14 引脚 VQFN (RGY) 封装和微型 X2QFN (RUC) 封装。

器件信息(1)

器件型号	封装	封装尺寸（标称值）
TS3A4751	TSSOP (14)	5.00mm × 4.40mm
	VQFN (14)	3.50mm × 3.50mm
	X2QFN (14)	2.00mm × 2.00mm

(1) 如需了解所有可用封装，请参阅数据表末尾的可订购产品附录。

简化原理图

本文档旨在为方便起见，提供有关 TI 产品中文版本的信息，以确认产品的概要。 有关适用的官方英文版本的最新信息，请访问 www.ti.com，其内容始终优先。 TI 不保证翻译的准确性和有效性。 在实际设计之前，请务必参考最新版本的英文版本。

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)(1)

			MIN	MAX	UNIT
V_{CC}	Supply voltage referenced to GND(2)		–0.3	4	V
V_{NO} V_{COM} V_{IN}	Analog and digital voltage		–0.3	V_{CC} + 0.3	V
I_{NO} I_{COM}	On-state switch current	V_{NO}, V_{COM} = 0 to V_{CC}	–100	100	mA
I_{CC} I_{GND}	Continuous current through V_{CC} or GND			±100	mA
V	Peak current pulsed at 1 ms, 10% duty cycle	COM, $V_{I/O}$		±200	mA
T_A	Operating temperature		–40	85	°C
T_J	Junction temperature			150	°C
T_{stg}	Storage temperature		–65	150	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
(2) Signals on COM or NO exceeding V_{CC} or GND are clamped by internal diodes. Limit forward diode current to maximum current rating.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±4000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 or ANSI/ESDA/JEDEC JS-002(2)	±1000	
		Machine Model	±300	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7 Detailed Description

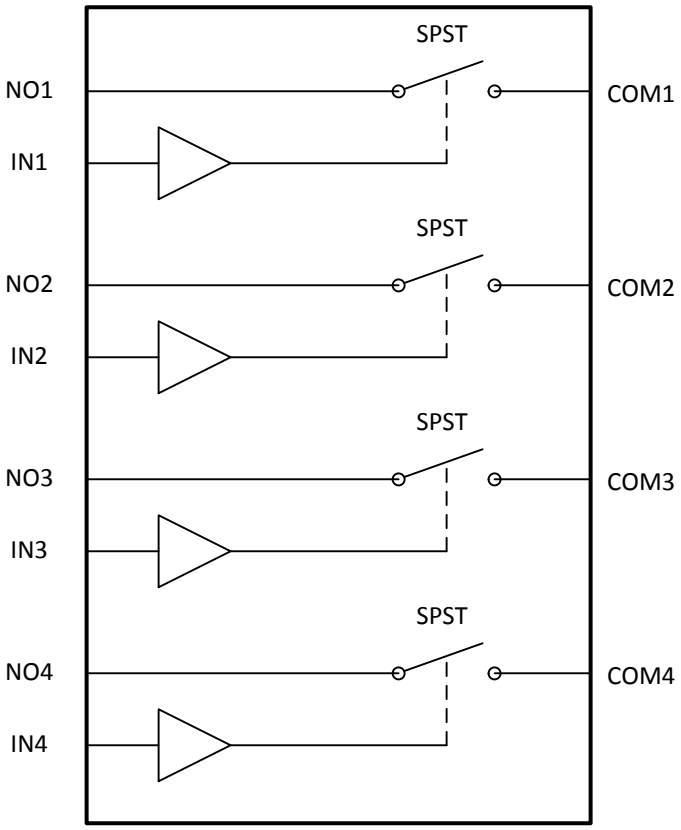

7.1 Overview

The TS3A4751 is a bidirectional, 4-channel, normally open (NO) single-pole single-throw (SPST) analog switch that operates from a single 1.6-V to 3.6-V supply. This device has fast switching speeds, handles rail-to-rail analog signals, and consumes very low quiescent power.

The digital input is 1.8-V CMOS compatible when using a 3-V supply.

The TS3A4751 has four normally open (NO) switches. The TS3A4751 is available in a 14-pin thin shrink small-outline package (TSSOP) and in space-saving 14-pin VQFN (RGY) and micro X2QFN (RUC) packages.

7.2 Functional Block Diagram

7.3 Feature Description

This device has fast switching speeds, handles rail-to-rail analog signals, and consumes very low quiescent power.

The digital input is 1.8-V TTL/CMOS compatible when using a 3-V supply.

7.4 Device Functional Modes

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

8.1.1 Logic Inputs

The TS3A4751 logic inputs can be driven up to 3.6 V, regardless of the supply voltage. For example, with a 1.8-V supply, IN may be driven low to GND and high to 3.6 V. Driving IN rail to rail minimizes power consumption.

8.1.2 Analog Signal Levels

Analog signals that range over the entire supply voltage (V_{CC} to GND) can be passed with very little change in R_{on} (see *Typical Characteristics*). The switches are bidirectional, so NO and COM can be used as either inputs or outputs.

8.2 Typical Application

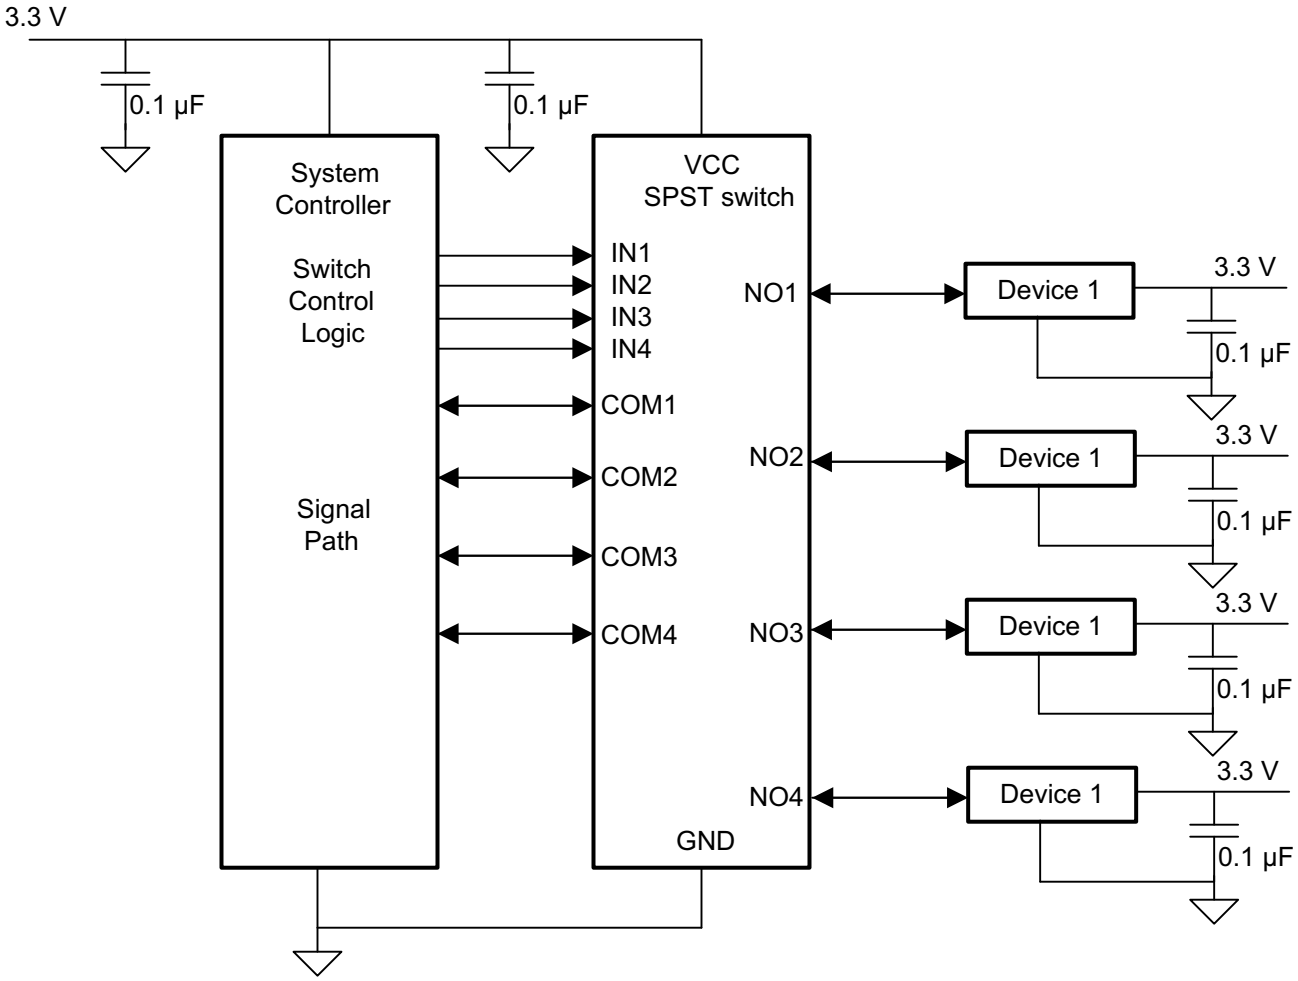

Figure 19. Typical Application Diagram

Copyright © 2006–2015, Texas Instruments Incorporated

Typical Application (continued)

8.2.1 Design Requirements

Ensure that all of the signals passing through the switch are with in the specified ranges to ensure proper performance.

8.2.2 Detailed Design Procedure

The TS3A4751 and can be properly operated without any external components. However, it is recommended that unused pins should be connected to ground through a 50-Ω resistor to prevent signal reflections back into the device. It is also recommneded that the digital control pins (INX) be pulled up to V_{CC} or down to GND to avoid undesired switch positions that could result from the floating pin.

8.2.3 Application Curve

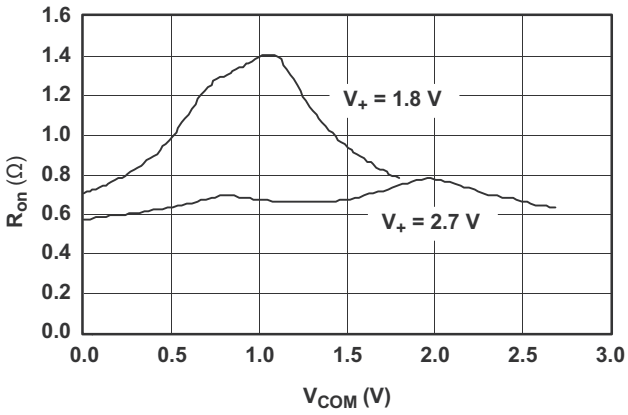

Figure 20. R_{on} vs V_{COM}

Copyright © 2006–2015, Texas Instruments Incorporated

9 Power Supply Recommendations

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the devices. Always sequence V_{CC} on first, followed by NO or COM.

Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the V_{CC} supply to other components. A 0.1-μF capacitor, connected from V_{CC} to GND, is adequate for most applications.

10 Layout

10.1 Layout Guidelines

High-speed switches require proper layout and design procedures for optimum performance.

Reduce stray inductance and capacitance by keeping traces short and wide.

Ensure that bypass capacitors are as close to the device as possible.

Use large ground planes where possible.

10.2 Layout Example

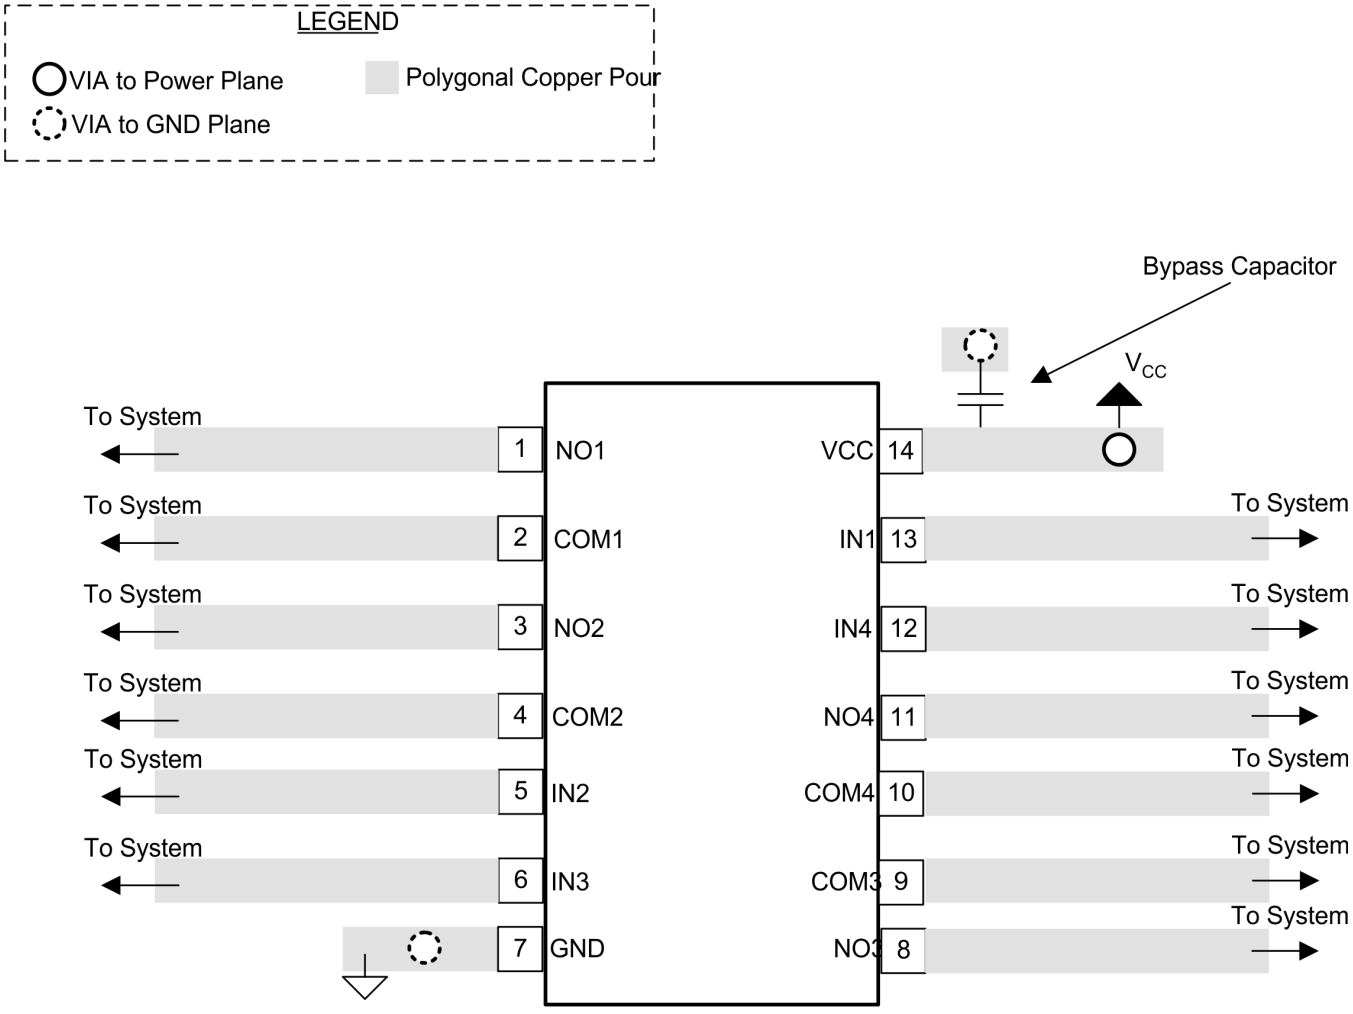

Figure 21. Layout Schematic

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

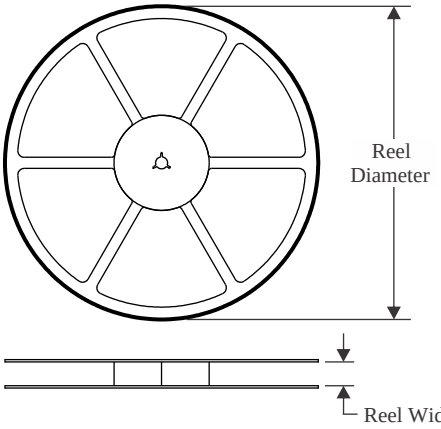

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative

and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

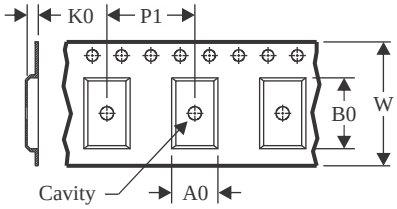

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

REEL DIMENSIONS

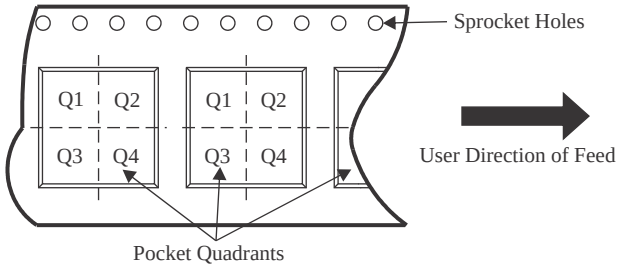

TAPE DIMENSIONS

A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

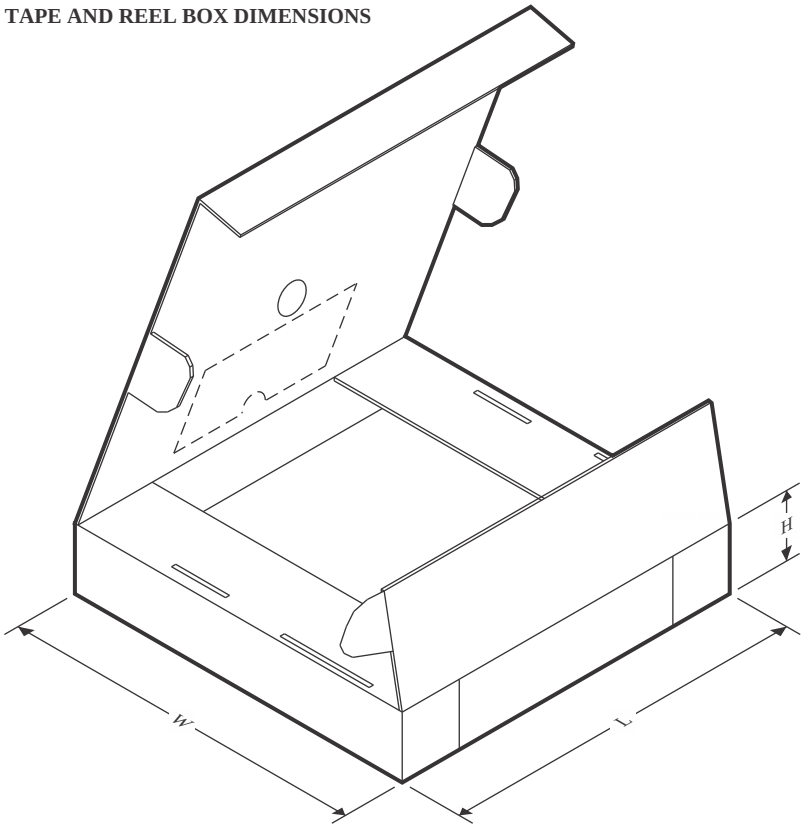

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

PACKAGE OUTLINE

PW0014A

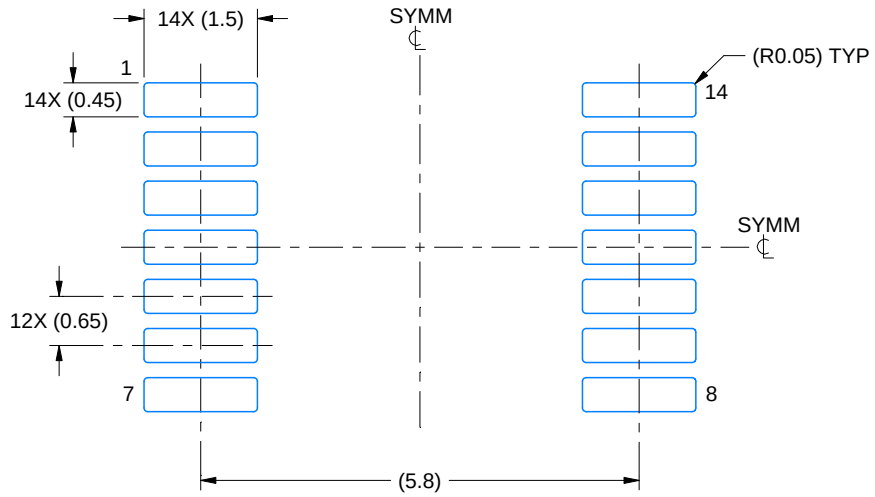

TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

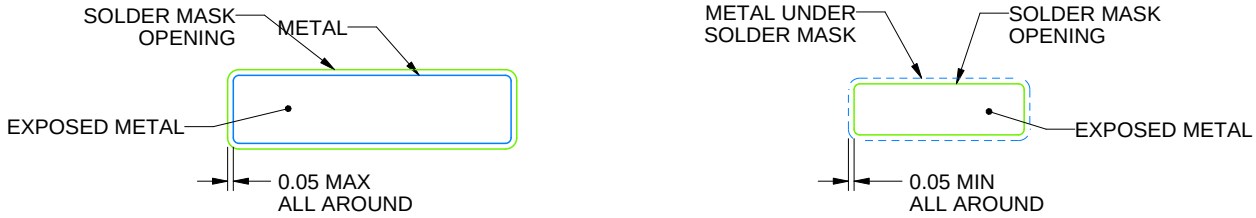

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-153.

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE: 10X

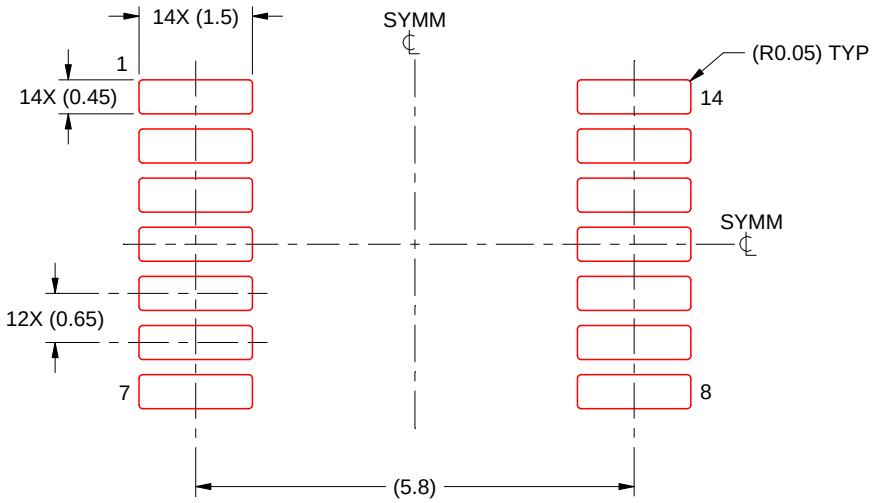

SOLDER MASK DETAILS

4220202/B 12/2023

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE: 10X

4220202/B 12/2023

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.
