

Introduction to Processor SDK Radar – Part 1

30 - October - 2018

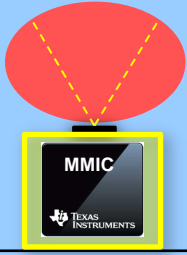

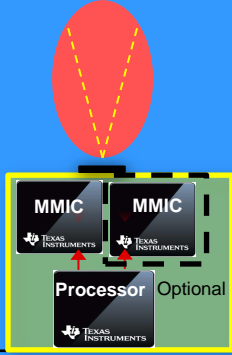

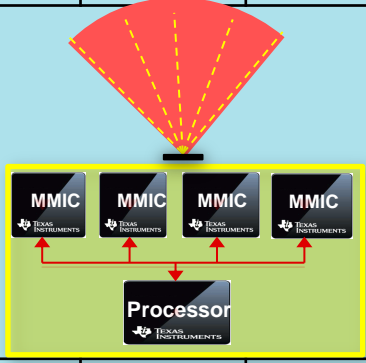

Agenda

- What is Processor SDK Radar?
 - Radar SDK Software Stack
- Processor SDK Radar Processing Chain
 - Algorithm Blocks (FFT, Peak Detection, Beam Forming)
 - Cascade Radar Data Processing Chain
- Getting Started with Processor SDK Radar

Agenda

- What is Processor SDK Radar?
 - Radar SDK Software Stack
- Processor SDK Radar Processing Chain
 - Algorithm Blocks (FFT, Peak Detection, Beam Forming)
 - Cascade Radar Data Processing Chain
- Getting Started with Processor SDK Radar

Radar Configurations

End Equipment	Proximity Sensor	Short Range Radar	Medium /Long Range Radar	Processor Entitlement using Processor SDK Radar		
				Long	Medium	Short
Typical Configuration						
Typical Radar Cube Memory	128 KiB	512 KiB	4 MiB	8 MiB	16 MiB	24 MiB
Approx. Mega Operations per second*	500	2200	5362	12720	25294	37868

R4F @ 200 MHz
FFT Acc. @ 200 MHz
Radar Data Mem
= 384 KiB

R4F @ 200 MHz
C67x @ 600 MHz
Radar Data Mem
= 768 KiB

2x DSP @ 750 MHz
1x EVE @ 650 MHz
DDR Memory =
64/128 MiB

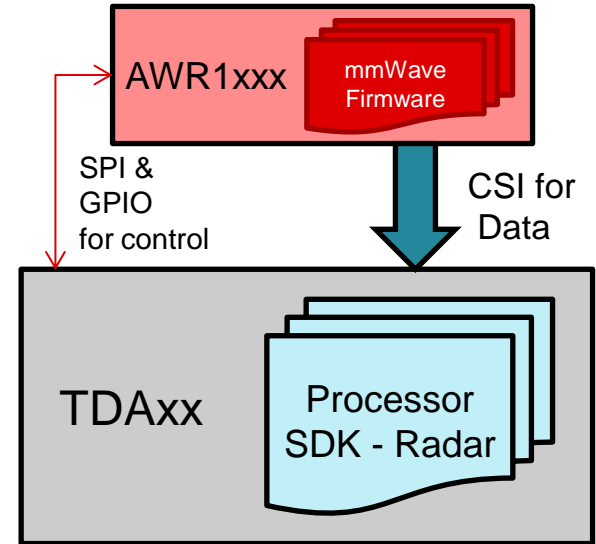

2x DSP @ 750 MHz
4x EVE @ 650 MHz
DDR Memory = 512 / 1024 MiB

mmWave SDK

Processor SDK Radar

What is Processor SDK Radar?

- Processor SDK Radar (a.k.a. Radar SDK) is a multi-processor software development package for TI's family of ADAS SoCs.
- The software framework allows users to create different Radar application data flows involving integration of FMCW transceiver, radar signal processing, and visualization on a display device.
- The framework has sample Radar processing data flows which exercises different CPUs and HW accelerators in the ADAS SoC and demonstrates how to effectively use different sub-systems within the SoC.
- The frame work is generic enough to plug in application specific algorithms in the system.

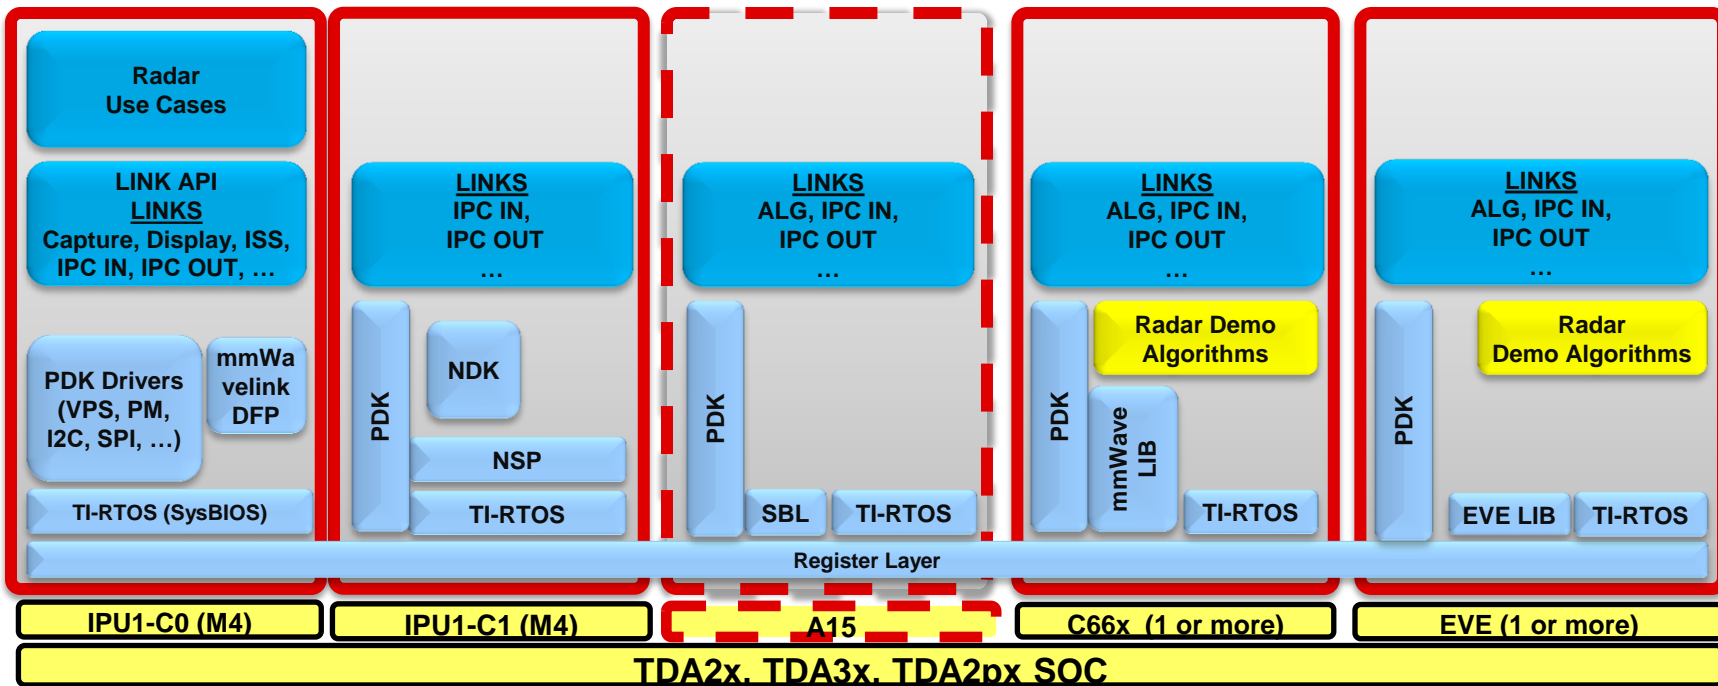

Processor SDK Radar Delivers:

- Demo use-cases on TDA3x, TDA2x and TDA2px:
 - Single and Multi chip AWR1243 configuration.
 - FFT, Peak Detection (CFAR - CA) and Angle of Arrival Estimation (Beam forming) on EVE.
 - FFT, Peak Detection (CFAR – CA) and Angle of Arrival Estimation (FFT) on C66x DSP.
 - Radar Raw Data capture via 1Gb Ethernet interface.
 - Cascade (TDA2x) and Satellite Radar (TDA3x) Demo.
 - Cascade Raw Radar Data capture via PCIe on TDA2x. (Q4 2018)
- Production ready imager drivers, peripheral drivers, and framework.

Processor SDK Radar – TI-RTOS SW Stack

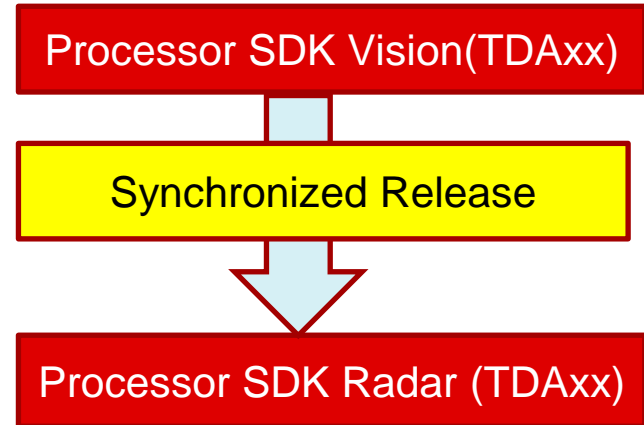

Only on TDA2x, TDA2Ex, TDA2px

Processor SDK Radar and Processor SDK Vision

- Cut-down of Vision SDK, focused on Radar
- Optimized functions for Radar processing (FFT kernels, ...) on DSP and EVE libraries
- Out-of-box integration with AWR12xx
- Sample Radar data flow using TDA3x/2x + AWR12xx and EVE/DSP processing libraries
- Same low level drivers, OS and tools as Vision SDK
- Same data/control flow framework as Vision SDK

- Video, vision, radar framework, algorithms, demos
- Common SW across TDA2x, TDA3x, TDA2Ex, TDA2px SoC/EVMs

- Excludes packages, algorithms, demos for video, vision
- Compact package with focus on Radar ONLY
