

DS96F172MQML/DS96F174MQML EIA-485/EIA-422 Quad Differential Drivers

Check for Samples: [DS96F172MQML](#), [DS96F174MQML](#)

FEATURES

- Meets EIA-485 and EIA-422 Standards
- Monotonic Differential Output Switching
- TRI-STATE Outputs
- Designed for Multipoint bus Transmission
- Common Mode Output Voltage Range: $-7.0V$ to $+12V$
- Operates from Single $+5.0V$ Supply
- Reduced Power Consumption
- Thermal Shutdown Protection
- DS96F172 and DS96F174 are Lead and Function Compatible with the SN75172/174 or the AM26LS31/MC3487

DESCRIPTION

The DS96F172 and the DS96F174 are high speed quad differential line drivers designed to meet EIA-485 Standards. The DS96F172 and the DS96F174 offer improved performance due to the use of L-FAST bipolar technology. The use of LFAST technology allows the DS96F172 and DS96F174 to operate at higher speeds while minimizing power consumption.

The DS96F172 and the DS96F174 have TRI-STATE outputs and are optimized for balanced multipoint data bus transmission at rates up to 15 Mbps. The drivers have wide positive and negative common mode range for multipoint applications in noisy environments. Positive and negative current-limiting is provided which protects the drivers from line fault conditions over a $+12V$ to $-7.0V$ common mode range. A thermal shutdown feature is also provided. The DS96F172 features an active high and active low Enable, common to all four drivers. The DS96F174 features separate active high Enables for each driver pair.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings⁽¹⁾

Storage Temperature Range (T_{Stg})	$-65^{\circ}\text{C} \leq T_A \leq +175^{\circ}\text{C}$
Lead Temperature (Soldering, 60 sec.)	300°C
Maximum Package Power Dissipation at 25°C ⁽²⁾	
LCCC package	2,000 mW
CDIP package	1,800 mW
Ceramic Flatpack package	1,000 mW
Supply Voltage	7.0V
Enable Input Voltage	5.5V

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional, but do not verify specific performance limits. For verified specifications and test conditions, see the Electrical Characteristics. The verified specifications apply only for the test conditions listed. Some performance characteristics may degrade when the device is not operated under the listed test conditions.
- (2) Above $T_A = 25^{\circ}\text{C}$, derate LCCC package 13.3, CDIP package 12.5, Ceramic flatpack package 7.1 mW/°C

(1) All currents into the device pins are positive; all currents out of the device pins are negative. All voltages are reference to ground unless otherwise specified.

(2) -55°C limit exceeds EIA standard RS-485 specification

(3) $\Delta|V_{OD}|$ is the change in magnitude of V_{OD} , that occurs when the input is changed between high and low levels.

(4) $\Delta|V_{OC}|$ is the change in magnitude of the V_{OC} that occurs when the input is changed between high and low levels.

TYPICAL APPLICATION

The line length should be terminated at both ends in its characteristic impedance.
Stub lengths off the main line should be kept as short as possible.

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
