

TLC59211 8-Bit DMOS Sink Driver

1 Features

- DMOS Process
- High Voltage Output ($V_{ds} = 30\text{ V}$)
- Output Current on Each Channel ($I_{ds}\text{ Max} = 200\text{ mA}$)
- Latch-Up Performance Exceeds 250 mA Per JEDEC Standard JESD-17
- ESD Protection Exceeds JESD 22
 - 2000-V Human Body Model (A114-A)
 - 200-V Machine Model (A115-A)
 - 1000-V Charged Device Model (C101)
- LED Driver Application
- Output Clamp Diode (Parasitic)

2 Applications

- Lamps and Display (LED)
- Hammers
- Relay

3 Description

The TLC59211 is an 8-bit LED and solenoid driver designed for 5-V V_{CC} operation.

The TLC59211 is characterized for operation from -40°C to 85°C .

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TLC59211	PDIP (20)	24.33 mm × 6.35 mm
	TSSOP (20)	6.50 mm × 4.40 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC}	Supply voltage	−0.5	7	V
D	Input voltage	−0.5	7	V
V _{ds}	Output voltage	H output	32	V
I _{ds}	Output current	1 bit for output low	200	mA
I _{IK}	Input clamp current	V _I < 0 V	−20	mA
	Operating free-air temperature	−40	85	°C
T _{stg}	Storage temperature	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±100
			V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

V_{CC} = 3 V to 5.5 V

		MIN	MAX	UNIT
V _{CC}	Supply voltage	3	5.5	V
V _{IH}	High-level input voltage	V _{CC} × 0.7	V _{CC}	V
V _{IL}	Low-level input voltage	0	V _{CC} × 0.3	V

6.9 Typical Characteristics

Figure 1. Maximum Output Currents vs Duty Cycle in PDIP (N) Package

7 Parameter Measurement Information

- A. C_L includes probe and jig capacitance.
- B. All input pulses are supplied by generators having the following characteristics: $\text{PRR} \leq 1\ \text{MHz}$, $Z_O = 50\ \Omega$, $t_r \leq 3\ \text{ns}$, and $t_f \leq 3\ \text{ns}$.
- C. The outputs are measured one at a time with one transition per measurement.
- D. t_{PLH} and t_{PHL} are the same as t_{pd} .

Figure 2. Test Circuit and Voltage Waveforms

8 Detailed Description

8.1 Overview

The TLC59211 is an 8-bit parallel LED and solenoid driver designed for 5-V V_{CC} operation. Each channel is individually controlled by its input.

8.2 Functional Block Diagram

8.3 Feature Description

Each of the 8 channels is controlled by its input D_n . When D_n is logic high, the current sink is enabled, output is low. When D_n is logic low, the current sink is disabled, output is pulled high.

(1) This symbol is in accordance with ANSI/IEEE Standard 91-1984 and IEC Publication 617-12.

Figure 3. Logic Symbol

8.4 Device Functional Modes

[Table 1](#) lists the functional modes of the TLC59211.

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

In LED display application, TLC59211 is used to drive the current sink for 8 LEDs in parallel. LED display pattern can be created by providing different bit pattern. LED can be duty cycled by either duty cycling the LED supply or the control bit.

9.2 Typical Application

Figure 4. LED Display Implementation With TLC59211

9.2.1 Design Requirements

For LED display application, an 8-bit shift register is used to provide the input control for TLC59211. A character generator circuit and LED power circuit is used to generate the bit pattern written into the shift register and provide the power control for the entire LED array. The LED power circuit controls the total current into the array and can also power cycle the LED array. For simple implementation, LED power circuit could be eliminated. The V_{LED} can be connected directly to the resistor and LED string.

9.2.2 Detailed Design Procedure

The combination of LED and resistor sets the current of the LED.

$$V_R + V_L = V_{LED}, I = (V_{LED} - V_L)/R \quad (1)$$

The maximum current through each channel of TLC59211 is determined by the number of the LEDs that are on and the duty cycle according to Figure 5 for TSSOP package.

Typical Application (continued)

9.2.3 Application Curve

Figure 5. Maximum Output Currents vs Duty Cycle in TSSOP (PW) Package

10 Power Supply Recommendations

The supply voltage to TLC59211 is from 3.3 V to 5.5 V. The voltage at output can be up to 30 V.

11 Layout

11.1 Layout Guidelines

The traces that carry current from the LED cathodes to the OUTx pins must be wide enough to support the current (up to 200 mA).

11.2 Layout Example

○ VIA to GND

Figure 6. Layout Example Recommendation

12 Device and Documentation Support

12.1 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

TI E2E™ Online Community *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

Design Support *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.2 Trademarks

E2E is a trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.3 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.4 Glossary

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

PACKAGING INFORMATION

Orderable part number	Status (1)	Material type (2)	Package Pins	Package qty Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)

TLC59211IPWR.A	Active	Production	TSSOP (PW) 20	2000 LARGE T&R	Yes	NIPDAU	Level-1-260C-UNLIM	-40 to 85	Y59211

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
