

CLASS V 2x2 LVDS CROSSPOINT SWITCH

 Check for Samples: [SN55LVCP22-SP](#)

FEATURES

- High Speed (>1000 Mbps) Upgrade for DS90CP22 2x2 LVDS Crosspoint Switch
- Low-Jitter Fully Differential Data Path
- 50 ps (Typ), of Peak-to-Peak Jitter With PRBS = $2^{23}-1$ Pattern
- Less Than 200 mW (Typ), 300 mW (Max) Total Power Dissipation
- Output (Channel-to-Channel) Skew Is 80 ps (Typ)
- Configurable as 2:1 Mux, 1:2 Demux, Repeater or 1:2 Signal Splitter
- Inputs Accept LVDS, LVPECL, and CML Signals
- Fast Switch Time of 1.7 ns (Typ)
- Fast Propagation Delay of 0.65 ns (Typ)
- Available in 16 pin CFP Package
- Inter-Operates With TIA/EIA-644-A LVDS Standard
- Military Temperature Range: -55°C to 125°C

APPLICATIONS

- Base Stations
- Add/Drop Muxes
- Protection Switching for Serial Backplanes
- Network Switches/Routers
- Optical Networking Line Cards/Switches
- Clock Distribution
- Engineering Evaluation (/EM) Samples are Available ⁽¹⁾

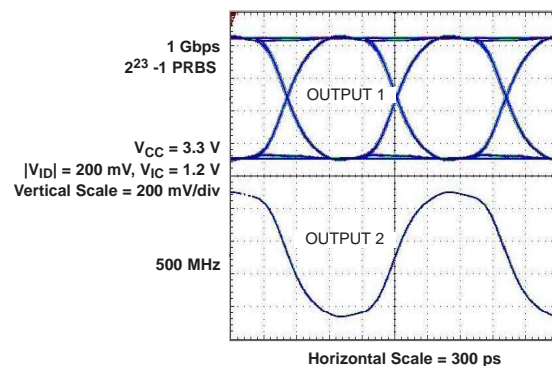

- (1) These units are intended for engineering evaluation only. They are processed to a non-compliant flow (e.g. no burn-in, etc.) and are tested to temperature rating of 25°C only. These units are not suitable for qualification, production, radiation testing or flight use. Parts are not warranted for performance on full MIL specified temperature range of -55°C to 125°C or operating life.

DESCRIPTION

The SN55LVCP22 is a 2x2 crosspoint switch providing greater than 1000 Mbps operation for each path. The dual channels incorporate wide common-mode (0 V to 4 V) receivers, allowing for the receipt of LVDS, LVPECL, and CML signals. The dual outputs are LVDS drivers to provide low-power, low-EMI, high-speed operation. The SN55LVCP22 provides a single device supporting 2:2 buffering (repeating), 1:2 splitting, 2:1 multiplexing, 2x2 switching, and LVPECL/CML to LVDS level translation on each channel. The flexible operation of the SN55LVCP22 provides a single device to support the redundant serial bus transmission needs (working and protection switching cards) of fault-tolerant switch systems found in optical networking, wireless infrastructure, and data communications systems. TI offers additional gigabit repeater/ translator and crosspoint products in the SN65LVDS100 and SN65LVDS122.

The SN55LVCP22 uses a fully differential data path to ensure low-noise generation, fast switching times, low pulse width distortion, and low jitter. Output channel-to-channel skew is 80 ps (typ) to ensure accurate alignment of outputs in all applications. Both SOIC and TSSOP package options are available to allow easy upgrade for existing solutions, and board area savings where space is critical.

OUTPUTS OPERATING SIMULTANEOUSLY

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

THERMAL CHARACTERISTICS

PARAMETER		TEST CONDITIONS		VALUE	UNITS
θ_{JA}	Junction-to-ambient thermal resistance			82.5	°C/W
θ_{JC}	Junction-to-case thermal resistance			7.5	°C/W
P_D	Device power dissipation	Typical	$V_{CC} = 3.3\text{ V}, T_A = 25^\circ\text{C}, 1\text{ Gbps}$	198	mW
		Maximum	$V_{CC} = 3.6\text{ V}, T_A = 125^\circ\text{C}, 1\text{ Gbps}$	313	

- A. See datasheet for absolute maximum and minimum recommended operating conditions.
- B. Silicon operating life design goal is 10 years at 105°C junction temperature (does not include package interconnect life).
- C. The predicted operating lifetime vs. junction temperature is based on reliability modeling using electromigration as the dominant failure mechanism affecting device wearout for the specific device process and design characteristics.

ABSOLUTE MAXIMUM RATINGS

 over operating free-air temperature range unless otherwise noted⁽¹⁾

		UNITS
Supply voltage ⁽²⁾ range, V_{CC}		–0.5 V to 4 V
CMOS/TTL input voltage (ENO, EN1, SEL0, SEL1)		–0.5 V to 4 V
LVDS receiver input voltage (IN+, IN–)		–0.7 V to 4.3 V
LVDS driver output voltage (OUT+, OUT–)		–0.5 V to 4 V
LVDS output short circuit current		Continuous
Storage temperature range		–65°C to 125°C
Maximum Junction temperature		150°C
Electrostatic discharge	Human body model ⁽³⁾	All pins ±5 kV
	Charged-device mode ⁽⁴⁾	All pins ±500 V

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminals.
- (3) Tested in accordance with JEDEC Standard 22, Test Method A114-A.
- (4) Tested in accordance with JEDEC Standard 22, Test Method C101.

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.
