

TL103Wx 内部基準電圧付き、デュアル・オペアンプ

1 特長

- TL103W および TL103WA のピン互換アップグレード製品である新しい **TL103WB**
- Bバージョンの仕様を以下のように改善:
 - 電源電圧範囲: 3V ~ 36V
 - 低い最大入力オフセット電圧: $\pm 2\text{mV}$ (25°C) および $\pm 2.5\text{mV}$ (全温度範囲)
 - ゲイン帯域幅: 1.2MHz
 - 合計消費電流: 550 μA
 - EMI 除去: RF および EMI フィルタを内蔵
 - 温度範囲: -40°C ~ 125°C
- Bバージョンの基準電圧の仕様を改善:
 - 2.5V の固定基準電圧
 - 厳しいトレランス: 最大 0.44% (25°C) および 1.04% (全温度範囲)
 - 広いシンク電流範囲: 100mA で 0.2mA (代表値)

2 アプリケーション

- バッテリー充電器
- スイッチモード電源
- リニア電圧レギュレーション
- データ収集システム
- 高精度定電流シンク

3 概要

TL103Wx デバイスは、デュアル オペアンプと固定基準電圧の構築ブロックを組み合わせたものです。どちらも、スイッチモード電源とリニア電源の制御回路によく使用されます。オペアンプ 1 は非反転入力に 2.5V の固定基準電圧に内部で接続されているのに対し、オペアンプ 2 は独立しており、両方の入力は不確定です。

アップグレードされた TL103WB は、より広い電源電圧範囲 (最大 36V)、より小さい消費電流 (275 μA /アンプ)、より厳しい電圧レギュレーションなどの点で改良されています。このレギュレーションは、両オペアンプ向けの低いオフセット電圧 (代表値 0.3mV) と、基準電圧の厳しいトレランス (25°C で 0.44%、動作温度範囲全体にわたって 1.04%) により達成されます。

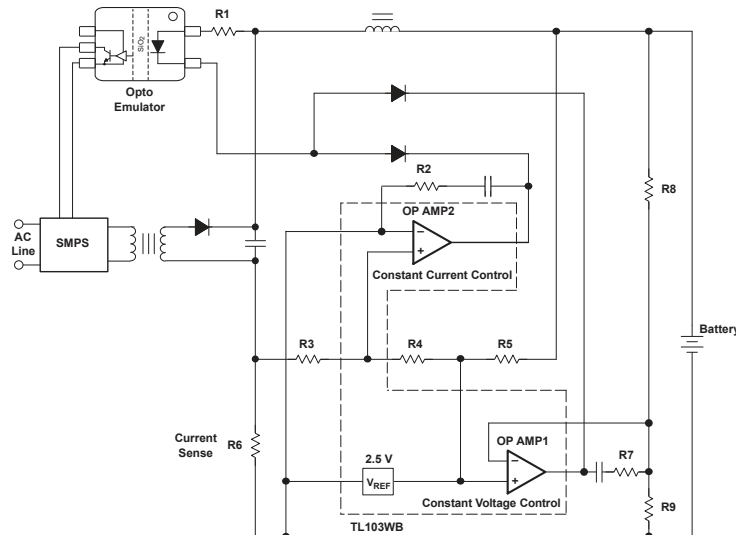

TL103WB は、-40°C ~ 125°C の広い温度範囲に対応しています。

パッケージ情報

部品番号	チャンネル数	パッケージ (1)	パッケージサイズ(2)
TL103W TL103WA	デュアル + 基準電圧	D (SOIC, 8)	4.9mm × 6mm
TL103WB		DDF (SOT-23, 8)	2.9mm × 2.8mm

(1) 詳細については、[セクション 10](#) を参照してください。

(2) パッケージサイズ (長さ × 幅) は公称値であり、該当する場合はピンも含まれます。

4 Pin Configuration and Functions

☒ 4-1. D and DDF Packages,
8-Pin SOIC and SOT-23-THN
(Top View)

表 4-1. Pin Functions

PIN		TYPE ⁽¹⁾	DESCRIPTION
NAME	NO.		
1OUT	1	O	Opamp 1 output
1IN-	2	I	Opamp 1 inverting input
1IN+	3	I	Opamp 1 non-inverting input and Shunt reference cathode terminal
V _{CC-}	4	I	Negative Supply Voltage
2IN+	5	I	Opamp 2 non-inverting input
2IN-	6	I	Opamp 2 inverting input
2OUT	7	O	Opamp 2 output
V _{CC+}	8	I	Positive Supply Voltage

(1) I = input, O = output

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

			MIN	MAX	UNIT
V _{CC±}	Supply voltage	TL103W/TL103WA	0	36	V
		TL103WB	0	40	
V _{ID}	Operational amplifier input differential voltage			36	V
V _I	Operational amplifier input voltage range ⁽²⁾		(V _{CC-}) - 0.3	V _{CC+}	V
I _{KA}	Voltage reference cathode current			100	mA
T _J	Maximum junction temperature			150	°C
T _{stg}	Storage temperature range		-65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) Not applicable to pin 4 (1IN+)

5.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2500	V
		Charged device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000	

(1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V _{CC±}	Supply voltage	TL103W/TL103WA	3	32	V
		TL103WB	3	36	
V _{ICR}	Input common-mode voltage range		V _{CC-}	(V _{CC+}) - 2	V
I _K	Cathode current	TL103W/TL103WA	0.5	100	mA
		TL103WB	0.2	100	
T _A	Operating free-air temperature	TL103W/TL103WA	-40	105	°C
		TL103WB	-40	125	

5.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TL103Wx		UNIT
		SOIC (D)	SOT-23 (DDF)	
		8 PINS	8 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	135.4	170.1	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	77.3	89.7	°C/W
R _{θJB}	Junction-to-board thermal resistance	78.9	87.5	°C/W
Ψ _{JT}	Junction-to-top characterization parameter	27.4	7.5	°C/W
Ψ _{JB}	Junction-to-board characterization parameter	78.1	87.3	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	–	–	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6 Detailed Description

6.1 Overview

The TL103Wx features two high-voltage amplifiers and a shunt voltage reference to allow for cost-sensitive and compact battery charger CC/CV feedback circuits. The upgraded TL103WB features is designed to provide a wide supply range (up to 36V), low offset voltage ($\pm 0.3\text{mV}$ typical) and a 1.2MHz bandwidth. The integrated voltage reference is tied to the non-inverting pin of one of OP AMP 1 and provides a fixed 2.5V referenced to the negative supply of the device. The shunt reference of the TL103WA/TL103WB features a tight tolerance of 0.44% at 25°C.

When a single supply voltage of 5V is used (or $\pm 2.5\text{V}$ split supply), the TL103Wx internal reference allows for a more accurate and power-efficient mid-supply signal to be used throughout your circuit. The TL103W/TL103WA devices are characterized for operation from -40°C to 85°C , the TL103WB devices are characterized for operation from -40°C to 125°C .

6.2 Functional Block Diagram

6.3 Feature Description

6.3.1 Internal Reference

The TL103Wx family features an internal shunt reference, tied to the non-inverting pin of one of the devices amplifiers. When supplied with enough voltage headroom ($\geq 2.5\text{V}$) and cathode current (0.5mA typical), the reference of the TL103Wx is forced to a fixed 2.5V. To not exceed the maximum cathode current, be sure that the reference input is current limited. Unlike many linear regulators, the reference of the TL103W is internally compensated to be stable without an output capacitor between the cathode and anode. If the reference is used to supply a load, stability criteria shown in [Figure 5-22](#) needs to be met.

Reference voltage tolerance varies based off the device grade chosen. At 25°C the TL103W features a reference tolerance of 0.72%, while the TL103WA/TL103WB both feature reference tolerances of 0.44%.

6.3.2 Input Common Mode Range

The valid common mode range is from device ground to $V_{CC+} - 1.5\text{V}$ ($V_{CC+} - 2\text{V}$ across temperature). Inputs may exceed V_{CC+} up to the absolute maximum voltage without device damage. At least one input must be in the valid input common-mode range for the output to be the correct phase. If both inputs exceed the valid range, then the output phase is undefined. If either input is more than 0.3V below V_{CC-} , then input current should be limited to 1mA and the output phase is undefined.

6.3.3 EMI Rejection

The TL103WB uses integrated electromagnetic interference (EMI) filtering to reduce the effects of EMI from sources such as wireless communications (radio frequency interference - RFI) and densely-populated boards with a mix of analog signal chain and digital components. EMI immunity can be improved with circuit design techniques; the TL103WB benefits from these design improvements. Texas Instruments has developed the ability to accurately measure and quantify the immunity of an operational amplifier over a broad frequency spectrum extending from 10MHz to 6GHz. 図 6-1 shows the results of this testing on the TL103WB. 表 6-1 shows the EMIRR IN+ values for the TL103WB at particular frequencies commonly encountered in real-world applications. The [EMI Rejection Ratio of Operational Amplifiers application report](#) contains detailed information on the topic of EMIRR performance relating to op amps and is available for download from www.ti.com.

図 6-1. EMIRR Testing

表 6-1. TL103WB EMIRR IN+ for Frequencies of Interest

FREQUENCY	APPLICATION OR ALLOCATION	EMIRR IN+
400MHz	Mobile radio, mobile satellite, space operation, weather, radar, ultra-high frequency (UHF) applications	62dB
900MHz	Global system for mobile communications (GSM) applications, radio communication, navigation, GPS (to 1.6GHz), GSM, aeronautical mobile, UHF applications	75dB
1.8GHz	GSM applications, mobile personal communications, broadband, satellite, L-band (1 GHz to 2GHz)	70dB
2.4GHz	802.11b, 802.11g, 802.11n, Bluetooth®, mobile personal communications, industrial, scientific and medical (ISM) radio band, amateur radio and satellite, S-band (2GHz to 4GHz)	65dB
3.6GHz	Radiolocation, aero communication and navigation, satellite, mobile, S-band	88dB
5GHz	802.11a, 802.11n, aero communication and navigation, mobile communication, space and satellite operation, C-band (4GHz to 8GHz)	71dB

6.4 Device Functional Modes

This device has one mode of operation that applies when operated within the recommended operating conditions.

7 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

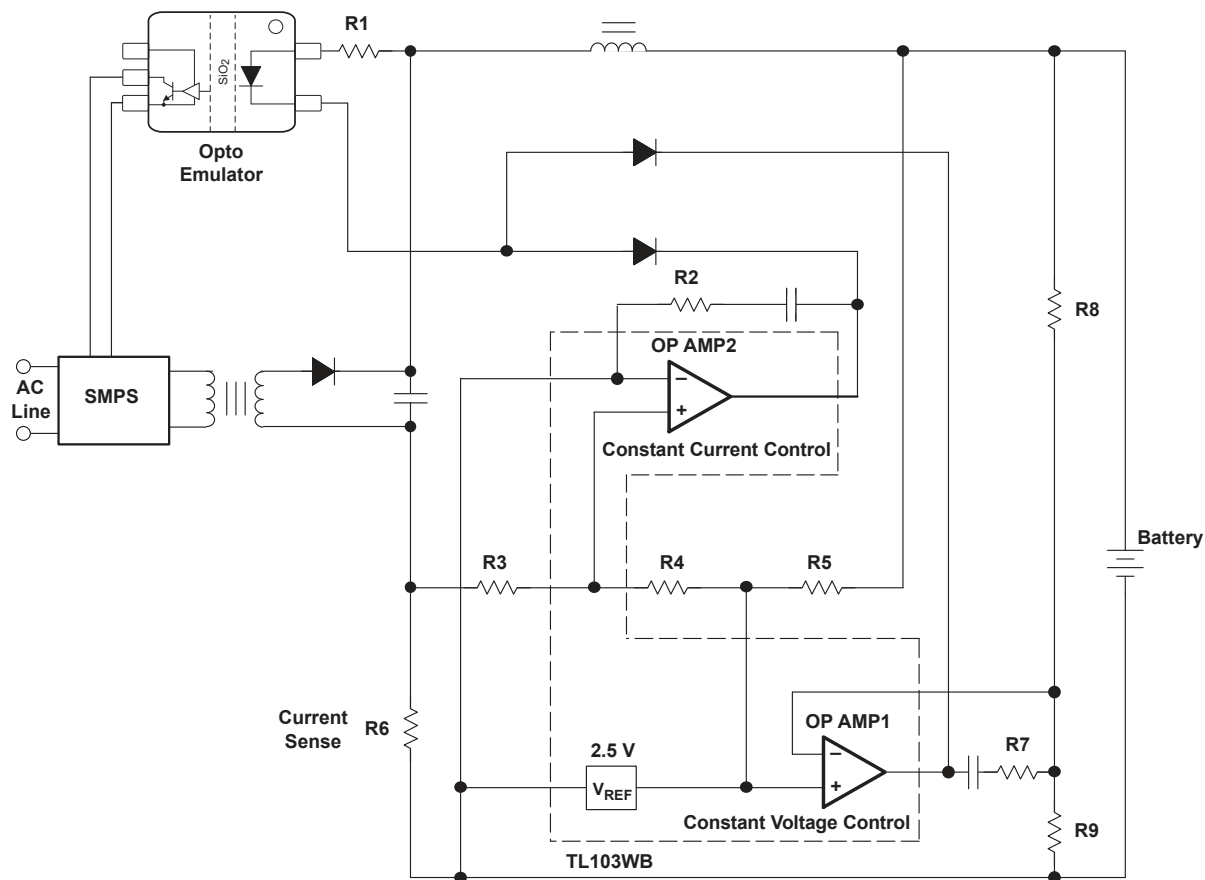

7.1 Application Information

The TL103Wx family offers a cost-effective and compact device for applications requiring both an accurate DC signal and signal conditioning. These devices offer a fixed 2.5V reference, wide bandwidth (1 to 1.2 MHz) and a low total supply current (0.55 to 0.7mA).

7.2 Typical Applications

7.2.1 Isolated Flyback CC/CV Feedback

As shown in [Figure 7-1](#), the TL103Wx is often used alongside an opto-coupler/opto-emulator to provide feedback to an isolated flyback. Utilizing the TL103Wx in this way allows for both an accurate and cost-optimized battery charger design that can achieve a stable CC/CV (Constant Current/Constant Voltage) charging profile. In this example, a simplified design procedure will be discussed. Additional details can be found in [Designing CC-CV Feedback Circuits With the TL103WB](#).

Typical Application Circuit

7.2.1.1 Design Requirements

The objective is to design an accurate CC-CV feedback circuit with the requirements provided in [表 7-1](#).

表 7-1. Design Parameters

PARAMETER	VALUE
Maximum Charge Current	6A
Battery Voltage Range	6V to 20V

7.2.1.2 Detailed Design Procedure

To switch between CV control and CC control, diodes are utilized to achieve an OR logic function as shown in [図 7-1](#). Designing the circuit in this way allows one of the amplifiers (configured in either CC or CV mode) to dominate the feedback in the design. In this design, *GND* refers to the negative node at the secondary side of the switch-mode power supply.

The fixed 2.5V of the TL103Wx reference provides a stable DC voltage that is used to specify the CC current and CV voltage. One of the requirements of achieving this fixed value, however, is that the cathode of the reference must be supplied with a voltage of 2.5V or above.

7.2.1.2.1 Constant Current Circuit

For the constant current feedback circuit, the amplifier is configured in a low-side current sense configuration. Resistor R6 is used as the current sensing resistor to sense the current flowing between the battery and flyback converter. This is shown in [式 1](#), where I_{BAT} is the output current delivered to the battery. The voltage at the non-inverting input of the amplifier specifies the maximum current (or constant current) that is delivered to the battery.

$$V_{BAT-} = I_{BAT} \times R6 \quad (1)$$

The reference of the TL103Wx is powered by the battery voltage. To be able to achieve a constant current, this reference needs to be provided with 2.5V or greater to provide a fixed 2.5V. The first step in designing a constant current circuit is to specify that 2.5V can be achieved at the battery's minimum voltage. The value of R5 must also be designed so that a sink-current between 0.5mA to 100 mA (for TL103W or TL103WA) is achieved across the specified range of the battery voltage. These two steps are shown below.

$$V_{BAT(min)} \times \frac{R4 + R3}{R4 + R3 + R5 + R6} \geq 2.5 \text{ V} \quad (2)$$

$$0.5 \text{ mA} \leq \frac{V_{BAT} - V_{REF}}{R5} \leq 100 \text{ mA} \quad (3)$$

For this design R5 is chosen to be 2kΩ. Knowing this and the specified battery range of 6V to 20V, we can calculate that the reference sinks anywhere from 1.75mA to 10mA using [式 2](#).

Once a fixed 2.5V reference is achieved, we can use this accurate DC voltage to specify a constant current target on the non-inverting input of the amplifier. This can be done by calculating the voltage at the amplifier's inverting input when a constant current target is achieved. Specifying R6 to be 10mΩ along with a constant current design target of 6A, we find that this voltage to be 60 mV using [式 1](#). The voltage at the non-inverting pin of the amplifier is specified by [式 4](#).

$$V_{IN+} = 2.5 \text{ V} \times \frac{R3}{R4 + R3} \quad (4)$$

Using the component values and design targets calculated so far, [式 2](#) and [式 4](#) can be updated to:

$$6 \text{ V} \times \frac{R4 + R3}{R4 + R3 + 2 \text{ k}\Omega + 10 \text{ m}\Omega} \geq 2.5 \text{ V} \quad (5)$$

$$60\text{ mV} = 2.5\text{ V} \times \frac{R3}{R4 + R3} \tag{6}$$

Using both 式 5 and 式 6, we calculate that R3 needs to be greater than around 34.28Ω. Adding additional headroom to this, we can calculate R3 = 36Ω and R4 = 1464Ω.

図 7-1. Constant Current Feedback Circuit

7.2.1.2.2 Constant Voltage Circuit

For the constant voltage feedback circuit, resistors R8 and R9 divide down the battery voltage to compare against the TL103Wx's reference. This is shown in 図 7-2. The voltage at the inverting input of the amplifier is designed to equal 2.5V when the battery reaches its maximum specified voltage (or desired constant voltage value). This is shown in for a maximum voltage of 20V provided in 表 7-1.

$$V_{BAT} \times \frac{R9}{R8 + R9} = 2.5\text{ V} \tag{7}$$

$$20\text{ V} \times \frac{R9}{R8 + R9} = 2.5\text{ V} \tag{8}$$

To mimic the constant current circuit and achieve a total impedance and 2kΩ across the battery, R8 is set to 1.96kΩ and R9 to 280Ω.

図 7-2. Constant Voltage Circuit

7.2.2 Constant Current Sink

Figure 7-3 shows the use of the TL103Wx along with a transistor to provide a constant current sink source. This type of circuit is common in LED drivers and can provide accurate performance and high bandwidth with minimal external components. Accuracy of this circuit is dominated by the reference voltage tolerance, amplifier offset voltage, and resistor tolerance. R_{LIM} is placed to limit the shunt current of the circuit's reference to a maximum of 100mA.

$$I_{SINK} = \left(V_{REF} \times \frac{R_2}{R_1 + R_2} \right) \times R_S \quad (9)$$

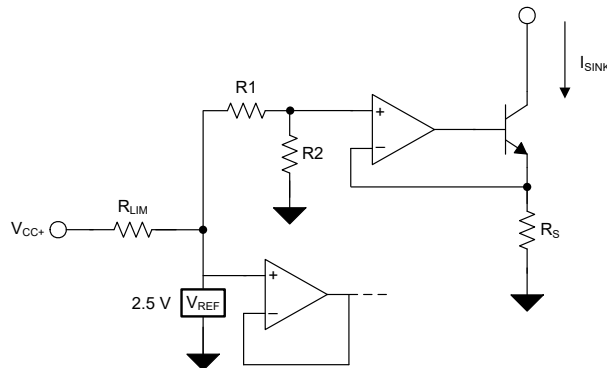

Figure 7-3. TL103Wx as Constant Current Sink

7.3 Power Supply Recommendations

Place 0.1µF bypass capacitors close to the power-supply pins to reduce errors coupling in from noisy or high-impedance power supplies. For more detailed information on bypass capacitor placement, see [セクション 7.4](#)

7.4 Layout

7.4.1 Layout Guidelines

For best operational performance of the device, use good PCB layout practices, including:

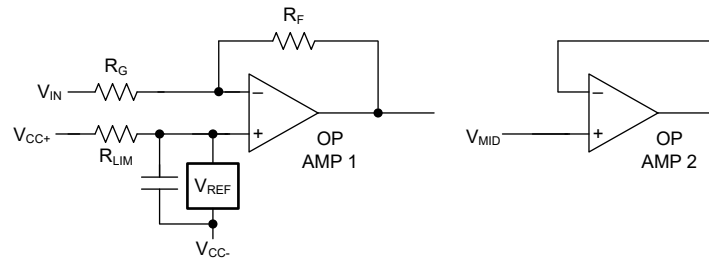

- Noise can propagate into analog circuitry through the power pins of the circuit as a whole, as well as the operational amplifier. Bypass capacitors are used to reduce the coupled noise by providing low-impedance power sources local to the analog circuitry.
 - Connect low-ESR, 0.1µF ceramic bypass capacitors between each supply pin and ground, placed as close to the device as possible. A single bypass capacitor from V+ to ground is applicable for single-supply applications.
 - If a bypass capacitor is needed to help stabilize the reference, place this capacitor as close to the reference pin as possible.
- Separate grounding for analog and digital portions of circuitry is one of the simplest and most-effective methods of noise suppression. One or more layers on multilayer PCBs are usually devoted to ground planes. A ground plane helps distribute heat and reduces EMI noise pickup. Make sure to physically separate digital and analog grounds, paying attention to the flow of the ground current.
- To reduce parasitic coupling, run the input traces as far away from the supply or output traces as possible. If not possible to keep them separate, cross the sensitive trace perpendicular as opposed to in parallel with the noisy trace.
- Place the external components as close to the device as possible. Keeping R_F and R_G close to the inverting input minimizes parasitic capacitance, as shown in [セクション 7.4.2](#).
- Keep the length of input traces as short as possible. Always remember that the input traces are the most sensitive part of the circuit.
- Consider a driven, low-impedance guard ring around the critical traces. A guard ring can significantly reduce leakage currents from nearby traces that are at different potentials.

- For applications shunting high currents through the reference, pay attention to the cathode and anode traces. Ensure the width of these traces are designed with proper current density.

9 Revision History

資料番号末尾の英字は改訂を表しています。その改訂履歴は英語版に準じています。

Changes from Revision Q (December 2023) to Revision R (April 2024)	Page
• TL103WB の DDF (SOT-23, 8) パッケージを事前情報 (プレビュー) から量産データ (アクティブ) に変更.....	1

Changes from Revision P (November 2023) to Revision Q (December 2023)	Page
• Updated maximum dynamic impedance from 0.5 Ω to 0.8 Ω in <i>Electrical Characteristics</i> table.....	5
• Updated EMIRR IN+ values in <i>EMIRR IN+ for Frequencies of Interest</i> table	13

Changes from Revision O (October 2023) to Revision P (November 2023)	Page
• Updated typical large-signal voltage gain of TL103WB from 140V/mV to 210 V/mV.....	5
• Updated minimum limit of supply-voltage rejection ratio of TL103WB from 80 dB to 99dB.....	5
• Added footnote in Electrical Characteristics tables to specify specifications which have limits set by characterization.....	5
• Updated minimum limit of gain bandwidth product for TL103WB from 0.5MHz to 0.7MHz.....	5
• Updated maximum limit of total supply current for TL103WB at 25°C from 0.92 mA to 0.77mA.....	5
• Updated maximum limit of total supply current for TL103WB at full temperature range from 1.6mA to 1.35mA.....	5
• Updated minimum limit of large-signal voltage gain for TL103WB at 25°C from 70V/mV to 77V/mV.....	6
• Updated minimum limit of large-signal voltage gain for TL103WB at full temperature range from 35V/mV to 45V/mV.....	6
• Added new CMRR specifications for TL103WB.....	6

Changes from Revision N (August 2023) to Revision O (October 2023)	Page
• 「特長」セクションの最大入力オフセット電圧、基準電圧のトレランス、合計消費電流、シンク電流範囲を変更	1
• TL103WB とフォトカプラ エミュレータを含めるよう「代表的なアプリケーション回路」図を変更	1
• TL103WB D (SOIC, 8) のステータスを事前情報 (プレビュー) から量産データ (アクティブ) に変更.....	1
• Changed <i>Thermal Information</i> table to include latest thermal metrics	5
• Added DDF information to <i>Thermal Information</i> table.....	5
• Updated k_{SVR} term to PSRR.....	5
• Changed maximum short circuit current from $\pm 60\text{mA}$ to $\pm 68\text{ mA}$	5
• Maximum reference input voltage deviation over temperature range for TL103W was changed from 30mV to 35mV.....	5
• Maximum reference input voltage deviation over temperature range for TL103WA was changed from 30mV to 26mV.....	5
• Added figures to the <i>Typical Characteristics</i> section to highlight the TL103WB device.....	8
• Added the <i>Detailed Description</i> and <i>Application and Implementation</i> sections.....	12
• Added the <i>Application and Implementation</i> sections.....	14

Changes from Revision M (October 2016) to Revision N (August 2023)	Page
• 「特長」セクションを更新し、TL103WB を強調	1
• ドキュメント全体にわたって表、図、相互参照の採番方法を更新.....	1
• ドキュメント全体を通して TL103WB の製品情報を追加	1
• 「概要」セクションを更新	1
• チャンネル数を含めるよう「製品情報」表を更新	1
• Removed DRJ package details and added DDF package for preview.....	3
• Updated formatting for <i>Electrical Characteristics</i> tables.....	5
• Updated typical dynamic impedance from 0.2 Ω to 0.45 Ω in <i>Electrical Characteristics</i> tables	5

Changes from Revision L (February 2016) to Revision M (October 2016)	Page
• Changed positive and negative terminals OP AMP 2 in the D Package image of <i>Pin Configuration and Functions</i>	3

Changes from Revision K (October 2010) to Revision L (February 2016)	Page
<ul style="list-style-type: none"> • 「製品情報」表、「ピン構成および機能」、「ESD 定格」、「熱に関する情報」、「デバイスおよびドキュメントのサポート」、「メカニカル、パッケージ、および注文情報」セクションを追加 • 「特長」を「2kV の ESD 保護 (HBM)」から「2.5kV の ESD 保護 (HBM)」に変更..... • 「代表的なアプリケーション回路」のツェナー ダイオード部品を V_{REF} に変更 • Changed the Zener diode component to V_{REF} in the D Package of <i>Pin Configuration and Functions</i> 	1 1 1 3

10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. (1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided.
