# TMDS1204 12Gbps、TMDS® および FRL HDMI™ に DC または AC 結合されたハイブリッド リドライバ

1 特長

- AC 結合または DC 結合の入力および出力、最大 12Gbps の HDMI 2.1 データ レートをサポート
  - HDMI 1.4b および HDMI 2.0b と下位互換
  - HDMI 2.1 固定レート リンク (FRL)：3、6、8、10、12Gbps
  - HDMI 2.1 の 3 レーンおよび 4 レーンの FRL をサポート
- HDMI シンク アプリケーション用に最適化
- 6GHz で最大 12dB の適応型および固定イコライザ
- I²C またはピン ストラップによりプログラム可能
- 1.8V および 3.3V の LVCMOS レベルをサポートする HPD レベル シフタを内蔵
- メイン レーンのフル レーン スワップ
- 個別のクロック パスとデータ パスを必要とするアプリケーション向けの内蔵ファンアウト バッファ
- 信号検出出力インジケータ
- リンク設定のためのデジタル ディスプレイ制御 (DDC) スヌーピング機能
- 低消費電力：
  - 12G FRL 4 レーン リミッティング動作：575mW
  - 12 G FRL 4 レーン リニア動作：220mW
  - パワーダウン時：0.6mW
- 民生用と産業用の温度仕様で提供
- 3.3V の単一電源電圧
- 40 ピン、0.4mm ピッチ、4mm × 6mm の WQFN パッケージ

2 アプリケーション

- ノート PC およびデスクトップ PC
- テレビ
- ホーム・シアターおよびエンターテインメント
- ゲーム機
- ドッキング・ステーション
- 業務用オーディオ、ビデオ、サイネージ
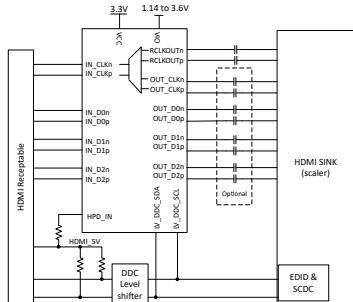

3 概要

TMDS1204 は、最大 12Gbps のデータ レートをサポートする HDMI 2.1 リドライバです。HDMI 1.4b および HDMI 2.0b と下位互換性があります。高速な差動入力および出力は AC 結合と DC 結合のどちらにも対応できるため、DP++ から HDMI へのレベル シフタとしても HDMI リドライバとしても TMDS1204 を使うことができます。TMDS1204 は、3 レーンと 4 レーンの HDMI 2.1 FRL を 3、6、8、10、12Gbps でサポートできます。

TMDS1204 は、ソースとシンクの両方のアプリケーションをサポートするハイブリッド リドライバです。ハイブリッド リドライバは、リニア リドライバ機能とリミッティング リドライバ機能のどちらでも動作できます。リミッティング リドライバとして構成した場合、TMDS1204 の差動出力電圧レベルは、グラフィックス処理ユニット (GPU) の出力レベルと無関係になるため、HDMI に準拠したレベルをレセプタクルで確保できます。リミッティング リドライバ モードは、HDMI ソース アプリケーションに推奨されます。リニア リドライバとして構成した場合、TMDS1204 の差動出力レベルは GPU 出力レベルの線形関数になるため、リンク トレーニングに対して TMDS1204 を透過的にして、チャネル ショートナとして動作させることができます。リニア リドライバ モードは HDMI シンク アプリケーションに推奨されます。

TMDS1204 は HPD レベル シフタを内蔵しています。HPD レベル シフタは、5V の HPD 信号を 1.8V または 3.3V にシフトします。レベル シフタ出力は、プッシュ、プル、またはオープン ドレイン用に構成することもできます。レベル シフタを内蔵しているため、ディスクリート ソリューションが不要であり、システム コストを節約できます。

TMDS1204 は、V_{CC} として 3.3V の単一電源レールをサポートしており、民生用温度仕様 (TMDS1204) と産業用温度仕様 (TMDS1204I) で提供しています。

製品情報

部品番号 [(1)]	温度	パッケージ
TMDS1204	Ta = 0℃～70℃	RNQ (WQFN、40)
TMDS1204I	Ta = -40℃～85℃

4 Pin Configuration and Functions

図 4-1. RNQ Package, 40-Pin WQFN (Top View)

表 4-1. Pin Functions

PIN		TYPE[1]	DESCRIPTION
NAME	NO.		
VCC	1	P	3.3V power supply
RCLKOUTp	2	O	HDMI 1.4/2.0 clock differential positive output when not operating in HDMI 2.1 FRL mode with Fan-out buffer feature enabled. External AC coupling required. If not used, then this pin can be left unconnected.
RCLKOUTn	3	O	HDMI 1.4/2.0 clock differential negative output when not operating in HDM I2.1 FRL mode with Fan-out buffer feature enabled. External AC coupling required. If not used, then this pin can be left unconnected.
CTLEMAP_SEL	4	I 4 Level (PU/PD)	CTLE Map select. When TMDS1204 is configured in pin-strap mode, this pin selects the CTLE Map used. 表 7-8 provides more details. Also in pin-strap this pin will control whether or not AEQ is enabled. 表 7-9 provides more details. In I²C mode, CTLE Map and AEQ enable is determined by registers.
LINEAR_EN	5	I 4-Level (PU/PD)	In pin-strap mode, selects whether TMDS1204 operates in linear or limited redriver mode. 表 7-5 provides more details.
VCC	6	P	3.3V power supply
EN	7	I 2-Level (PU)	When low, TMDS1204 will be held in reset. The IN_D[2:0], IN_CLK, OUT_D[2:0] and OUT_CLK pins will be held in high impedance while EN is low. On rising edge of EN, device will sample four-level inputs and function based on the sampled state of the pins. This pin has a internal 250 k pull-up to VIO.

表 4-1. Pin Functions (続き)

PIN		TYPE[1]	DESCRIPTION
NAME	NO.		
EQ1	8	I 4 Level (PU/PD)	EQ1 Pin Setting when TMDS1204 is configured for pin strap mode; Works in conjunction with EQ0; 表 7-6 provides the settings. In I²C mode, EQ settings are controlled through registers.
IN_CLKn	9	I	Clock differential negative input.
IN_CLKp	10	I	Clock differential positive input.
HPD_OUT	11	O	Hot plug detect output to source side. If not used, then this pin can be left floating.
IN_D0n	12	I	Channel 0 differential negative input.
IN_D0p	13	I	Channel 0 differential positive input.
VIO	14	P	Voltage supply for I/Os. 表 7-2 provides more information.
IN_D1n	15	I	Channel 1 differential negative input.
IN_D1p	16	I	Channel 1 differential positive input.
MODE	17	I 4 Level (PU/PD)	Mode control pin. Selects between pin-strap and I²C mode. For more information, refer to セクション 7.3.1.
IN_D2n	18	I	Channel 2 differential negative input.
IN_D2p	19	I	Channel 2 differential positive input.
VCC	20	P	3.3V power supply.
SCL/CFG0	21	I	I²C Clock/CFG0: when TMDS1204 is configured for I²C mode, this pin will function as the I²C clock. Otherwise, this pin will function as CFG0. 表 7-18 provides more details.
SDA/CFG1	22	I/O	I²C Data / CFG1: When TMDS1204 is configured for I²C mode, this pin will function as the I²C clock. Otherwise, this pin will function as CFG1. 表 7-19 provides more details.
AC_EN	23	I 2-Level (PD)	In pin-strap mode, selects whether high speed transmitters are externally AC or DC coupled. 0: DC-coupled 1: AC-coupled
LV_DDC_SCL	24	I/O	Low voltage side DDC clock line. Internally pulled-up to VIO.
LV_DDC_SDA	25	I/O	Low voltage side DDC data line. Internally pulled-up to VIO.
SIGDET_OUT	26	O	SIGDET_OUT. Open drain output asserted low when signal is detected on IN_CLK or IN_D2 when HPD_IN is high. Otherwise signal is de-asserted. When used requires 10k or greater pull-up resistor.
DCGAIN	27	I 4 Level (PU/PD)	DC Gain. "0": −3dB "R": −3dB "F": 0dB "1": +1dB
VCC	28	P	3.3V power supply
TXPRE	29	I 4 Level (PU/PD)	TX pre-emphasis control: in pin-strap mode with limited enabled, this pin controls TX EQ. In pin-strap with linear and AEQ enabled, this pin will adjust the adapted value. 表 7-15 provides the available TXPRE settings when operating in pin strap mode. In I²C mode, Tx pre-emphasis is controlled through registers.
OUT_D2p	30	O	TMDS data 2 differential positive output
OUT_D2n	31	O	TMDS data 2 differential negative output
HPD_IN	32	I 2-Level (PD)	Hot plug detect input from sink side. This pin has an internal pull-down resistor and is fail-safe.
OUT_D1p	33	O	TMDS data 1 differential positive output
OUT_D1n	34	O	TMDS data 1 differential negative output

表 4-1. Pin Functions (続き)

PIN		TYPE[1]	DESCRIPTION
NAME	NO.		
ADDR/EQ0	35	I 4 Level (PU/PD)	Address bit for I^{2}C programming when TMDS1204 is configured for I^{2}C mode. 表 7-22 provides more details. EQ0 pin setting when TMDS1204 is configured for pin strap mode; works in conjunction with EQ1; 表 7-6 lists the settings. In I^{2}C mode, EQ settings are controlled through registers.
OUT_D0p	36	O	TMDS data 0 differential positive output
OUT_D0n	37	O	TMDS data 0 differential negative output
TXSWG	38	I 4 Level (PU/PD)	TX output swing control: 4 settings. This pin is only used in pin strap mode. 表 7-17 provides the available TX swing settings. In I^{2}C mode, TX output swing is controlled through registers.
OUT_CLKp	39	O	TMDS data clock differential positive output
OUT_CLKn	40	O	TMDS data clock differential negative output
Thermal Pad		—	Thermal pad. Connect to a solid ground plane.

(1)   I = input, O = output, P = power, G = ground

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)[(1)]

		MIN	MAX	UNIT
Supply Voltage	V_{CC} and V_{IO}	-0.5	4	V
Input Voltage	Differential Inputs (IN_D[2:0], IN_CLK)	-0.3	4	V
Output voltage	RCLKOUTp/n, HPD_OUT, SIGDET_OUT outputs	-0.3	4	V
Output voltage	Differential outputs (OUT_D[2:0], OUT_CLK)	-0.3	4	V
Control pins	LV_DDC_SDA, LV_DDC_SCL, SCL/CFG0, SDA/CFG1, MODE, CLTEMAP_SEL, TXSWG, TXPRE, EQ1, ADDR/EQ0, EN, AC_EN, LINEAR_EN, DCGAIN	-0.5	4	V
	HPD_IN	-0.5	6	V
T_J	TMDS1204 Junction temperature		105	°C
T_J	TMDS1204I Junction temperature		125	°C
T_{stg}	Storage temperature	-65	150	°C

(1)   Operation outside the *Absolute Maximum Rating* may cause permanent damage to the device. Absolute maximum ratings do not imply functional operation of the device at these or any other conditions beyond those listed under the *Recommended Operating Condition.* If briefly operating outside the *Recommended Operating Conditions* but within the *Absolute Maximum Ratings*, the device may not sustain damage, but it may not be fully functional. Operating the device in this manner may affect device reliability, functionality, performance, and shorten the device lifetime.

5.2 ESD and Latch-Up Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001[(1)]	±4000	V
		Charged-device model (CDM), per JEDEC specification JS-002[(2)]	±1500	
$V_{(Supply)}$	Supply Test	Supply test, per JESD78F class II[(3)]	1.5 x V_{CC}	V
$I_{(signal+)}$	Positive signal pin latch-up	Signal pin test, per JESD78F class II, immunity level A (all signal pins)[(3)]	+100	mA
$I_{(signal-)}$	Negative signal pin latch-up	Signal pin test, per JESD78F class II, immunity level A (all signal pins except pin 2 and pin 3)[(3)]	-100	mA
		Signal pin test, per JESD78F class II, immunity level B, annex A flow 1F (pin 2 and pin 3 are connected through 10 nF capacitors)[(3)(4)]	-100	mA

(1)   JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process. .
(2)   JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.
(3)   JESD78F at maximum ambient temperature
(4)   Per annex A flow 1F, negative pulse immunity on pin 2 and pin 3 is –15 mA without 10 nF series capacitors. Care should be given during ICT to limit test current to less than –15 mA.

5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage when high-speed RX pins (IN_D[2:0] and IN_CLK) is AC-coupled to a DP++ TX	3.0	3.3	3.6	V
V_{CC}	Supply voltage when high-speed RX pins (IN_D[2:0] and IN_CLK) is DC-coupled to a HDMI TX	3.135	3.3	3.465	V
V_{IO}	VIO supply when 1.2V LVCMOS level used.	1.14	1.2	1.26	V
V_{IO}	VIO supply when 1.8V LVCMOS level used.	1.7	1.8	1.9	V
V_{IO}	VIO supply when 3.3V LVCMOS level used.	3	3.3	3.6	V
V_{PSN}	Peak to peak Power supply noise on V_{CC} pins (less than 4MHz).			100	mV
V_{CTL3}	DC input voltage for SCL/CFG0, SDA/CFG1, MODE, AC_EN, LINEAR_EN, EN, CTLEMAP_SEL, TXSWG, TXPRE, EQ1, ADDR1/EQ0, DCGAIN, LV_DDC_SCL, LV_DDC_SDA	-0.3		3.6	V

5.3 Recommended Operating Conditions (続き)

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{CTL5}	DC input voltage for HPD_IN pins	−0.3		5.5	V
C_{ACRX}	Optional external AC-coupling capacitor on IN_Dx and IN_CLK.	85		253	nF
C_{ACTX}	External AC-coupling capacitor on OUT_Dx and OUT_CLK when AC_EN = H.	85		253	nF
T_A	TMDS1204 Ambient temperature	0		70	°C
T_A	TMDS1204I Ambient temperature	−40		85	°C

5.4 Thermal Information

THERMAL METRIC[1]		TMDS1204	UNIT
		RNQ (WQFN)	
		40 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	30.9	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	21.2	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	11.7	°C/W
Ψ_{JT}	Junction-to-top characterization parameter	0.3	°C/W
Ψ_{JB}	Junction-to-board characterization parameter	11.7	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	3.8	°C/W

(1)   For more information about traditional and new thermal metrics, see the Semiconductor and IC Package Thermal Metrics application report.

5.5 Electrical Characteristics

over recommended voltage and operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
POWER						
$P_{ACTIVE-H14-LT-ARX-DTX}$	Power dissipation in HDMI 1.4 3.4Gbps active operation	Pin Strap mode; DR = 3.4Gbps; HPD_IN = H; No de-emphasis/pre-emphasis; Limited redriver mode; DC-coupled TX; AC-coupled RX; 3Gbps CTLE;		190	265	mW
$P_{ACTIVE-H20-LT-ARX-DTX}$	Power dissipation in HDMI 2.0 6Gbps active operation	Pin Strap mode; DR = 6Gbps; HPD_IN = H; No de-emphasis/pre-emphasis; Limited redriver mode; DC-coupled TX; AC-coupled RX; 6Gbps CTLE;		215	305	mW
$P_{ACTIVE-FRL-LT-DRX-DTX}$	Power dissipation in FRL 12Gbps active operation when TX is DC-coupled (AC_EN = L) and RX is DC-coupled;	Pin Strap mode; DR = 12Gbps; HPD_IN = H; TXFFE0; Limited redriver mode; DC-coupled TX; DC-coupled RX to 3.3V Vicm; 12Gbps CTLE;		540	775	mW
$P_{ACTIVE-FRL-LT-ARX-ATX}$	Power dissipation in FRL 12Gbps active operation when TX is AC-coupled (AC_EN = H)	Pin Strap mode; DR = 12Gbps; HPD_IN = H; TXFFE0; Limited redriver mode; AC-coupled TX; AC-coupled RX;12Gbps CTLE;		840	1220	mW
$P_{ACTIVE-FRL-LT-ARX-DTX}$	Power dissipation in FRL 12Gbps active operation when TX is DC-coupled (AC_EN = L)	Pin Strap mode; DR = 12Gbps; HPD_IN = H; TXFFE0; Limited redriver mode; DC-coupled TX; AC-coupled RX; 12Gbps CTLE;		575	785	mW
$P_{ACTIVE-FRL-LR-ARX-DTX}$	Power dissipation in FRL 12Gbps active operation when TX is DC-coupled (AC_EN = L)	Pin Strap mode; DR = 12Gbps; HPD_IN = H; Highest linearity setting; Linear redriver mode; DC-coupled TX; AC-coupled RX; 12Gbps CTLE;		220	310	mW

5.5 Electrical Characteristics (続き)

over recommended voltage and operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$P_{ACTIVE\text{-}FRL\text{-}LR\text{-}ARX\text{-}ATX}$	Power dissipation in FRL 12Gbps active operation when TX is AC-coupled (AC_EN = H)	Pin Strap mode; DR = 12Gbps; HPD_IN = H; Highest linearity setting; Linear redriver mode; AC-coupled TX; AC-coupled RX; 12Gbps CTLE		660	990	mW
P_{PD}	Power in power-down (HPD_IN = L)	Pin Strap mode; HPD_IN = L; EN = L or H; High-speed outputs are disconnected;		0.6	2	mW
P_{SD}	Power in standby (HPD_IN = H) but no incoming signal	Pin Strap mode; HPD_IN = H; No incoming signal; EN = H; DC-coupled TX; AC-coupled RX; Limited redriver mode; High-speed outputs are connected;		1.0	1.85	mW
I_{VIOQ}	VIO quiescent current	HPD_IN = H;VCC = VIO = 3.6V; LV_DDC_SDA/SCL = H;			16	µA
I_{VIOA}	VIO active instantaneous current	VCC = VIO = 3.6V; HPD_IN = H;			1	mA
2-LEVEL CONTROL PINS (EN, SCL/CFG0, SDA/CFG1, AC_EN)						
V_{IO_TRSHD}	Threshold for selecting between 1.2V LVCMOS / 1.8V LVCMOS			1.5		V
V_{IO_TRSHD}	Threshold for selecting between 1.8V LVCMOS / 3.3V LVCMOS			2.5		V
V_{IL_1p2V}	Low-level input voltage for SCL/CFG0, SDA/CFG1	VIO = 1.26V; VCC = 3.0V;	-0.3		0.360	V
V_{IH_1p2V}	High-level input voltage for SCL/CFG0, SDA/CFG1	VIO = 1.14V; VCC = 3.6V;	0.8		3.6	V
V_{IL_1p8V}	Low-level input voltage for SCL/CFG0, SDA/CFG1	VIO = 1.9V; VCC = 3.0V;	-0.3		0.57	V
V_{IH_1p8V}	High-level input voltage for SCL/CFG0, SDA/CFG1	VIO = 1.7V; VCC = 3.6V;	1.19		3.6	V
V_{IL_3p3V}	Low-level input voltage for SCL/CFG0, SDA/CFG1	VIO = 3.6V; VCC = 3.0V;	-0.3		0.8	V
V_{IL_3p3V}	Low-level input voltage for AC_EN	VIO = 3.6V; VCC = 3.0V;	-0.3		0.8	V
V_{IH_3p3V}	High-level input voltage for SCL/CFG0, SDA/CFG1	VIO = 3.0V; VCC = 3.6V;	2.2		3.6	V
V_{IH_3p3V}	High-level input voltage for AC_EN	VIO = 3.0V; VCC = 3.6V;	2.2		3.6	V
V_{OL_1p2V}	Low-level output voltage SDA/CFG1	V_{CC} = 3.0V; VIO = 1.2V;	-0.3		0.3	V
I_{OL_1p2V}	Low-level output current SDA/CFG1	V_{CC} = 3.0V; VIO = 1.2V;	2			mA
V_{OL}	Low-level output voltage SDA/CFG1	V_{CC} = 3.0V; VIO = 1.8V or 3.3V;	-0.3		0.4	V
I_{OL}	Low-level output current SDA/CFG1	V_{CC} = 3.0V; VIO = 1.8V or 3.3V;	4			mA
I_{IL_I2C}	Low-level input current SCL/CFG0, SDA/CFG1	V_{IN} = 0V; VIO = 1.8V or 3.3V;	−1		1	µA
I_{LEAK}	Fail-safe input current for SCL/CFG0, SDA/CFG1	V_{IN} = 3.6V; VCC = 0V;	−25		25	µA
V_{IL_EN}	Low-level input voltage for EN pin.	VIO = 1.14V; VCC = 3.3V;	-0.3		0.4	V
V_{IH_EN}	High-level input voltage for EN pin.	VIO = 3.6V; VCC = 3.3V;	0.8		3.6	V
I_{IL}	Low-level input current EN	V_{IN} = 0V; VIO = 1.8V or 3.3V; VCC = 3.6V	−20		20	µA
I_{IL}	Low-level input current AC_EN	V_{IN} = 0V; VIO = 1.8V or 3.3V;	−1		1	µA
I_{IH_EN}	High-level input current for EN	V_{IN} = 3.6V; VIO = 1.8V or 3.3V;	−1		1	µA
I_{IH_ACEN}	High-level input current for AC_EN	V_{IN} = 3.6V; VIO = 1.8V or 3.3V;	−24		24	µA
R_{PU_EN}	Internal Pull-up resistance on EN.		125	250	350	kΩ
R_{PD_ACEN}	Internal Pull-down resistance on AC_EN		125	250	350	kΩ

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
I_{OL_3p3V}	Low level output current for 3.3V LVCMOS	HPD_IN = $V_{IL-HPDIN}$; I$_2$C mode;	4			mA
I_{OH_1p8V}	High level output current for 1.8V LVCMOS	HPD_IN = $V_{IH-HPDIN}$;			-1.1	mA
I_{OL_1p8V}	Low level output current for 1.8V LVCMOS	HPD_IN = $V_{IL-HPDIN}$; I$_2$C mode;	1.2			mA
4-LEVEL CONTROL (MODE, LINEAR_EN, EQ1, ADDR/EQ0, TXSLEW, TXPRE, TXSWG, DCGAIN)						
V_{TH}	Threshold "0" / "R"	V_{CC} = 3.3V		0.55		V
V_{TH}	Threshold "R" / "F"	V_{CC} = 3.3V		1.65		V
V_{TH}	Threshold "F" / "1"	V_{CC} = 3.3V		2.7		V
I_{IH}	High-level input current	V_{IH} = 3.6V; V_{CC} = 3.6V;	20		60	µA
I_{IL}	Low-level input current	V_{IL} = 0V; V_{CC} = 3.6V;	−100		-40	µA
R_{4PU}	Internal pullup resistance			48		kΩ
R_{4PD}	Internal pull-down resistance			98		kΩ
HDMI HIGH SPEED INPUTS						
$D_{R\_RX\_DATA}$	Data lanes data rate		0.25		12	Gbps
$D_{R\_RX\_CLK}$	Clock lane data rate		0.25		12	Gbps
$V_{ID(DC)}$	DC differential input swing	At pins; LINEAR_EN = L;	400		1200	mVpp
$V_{ID(EYE)}$	Differential input swing eye opening	At pins;	75			mVpp
V_{RX_ASSERT}	Signal detect assert level.	PRBS7 pattern; 12Gbps;		180		mVpp
$V_{RX\_DEASSERT}$	Signal detect deassert level.	PRBS7 pattern; 12Gbps;		110		mVpp
V_{ICM-DC}	Input DC common mode voltage bias	At pins;	2.5	3.3	VCC	V
$E_{EQ\_12Gbs\_MAX\_LT}$	Maximum Fixed EQ gain (AC - DC)	At 6GHz; 12Gbps CTLE; EQ15; DC Gain = 0dB; Limited Mode; At output of RX;		12		dB
$E_{EQ\_12Gbps\_MIN\_LT}$	Minimum Fixed EQ gain (AC - DC)	At 6GHz; 12Gbps CTLE; EQ0; DC Gain = 0dB; Limited Mode; At output of RX;		1.0		dB
$E_{EQ\_12Gbps\_BYPASS\_LT}$	Maximum Fixed EQ Gain when EQ is bypassed. (AC - DC)	At 6GHz; 12Gbps CTLE; DC Gain = 0dB; Limited Mode; At output of RX;		-1.5		dB
$E_{EQ\_6Gbs\_MAX\_LT}$	Maximum Fixed EQ gain (AC - DC)	At 3GHz; 6Gbps CTLE; EQ15; DC Gain = 0dB; Limited Mode; At output of RX;		12.0		dB
$E_{EQ\_6Gbps\_MIN\_LT}$	Minimum Fixed EQ gain (AC - DC)	At 3GHz; 6Gbps CTLE; EQ0; DC Gain = 0dB; Limited Mode; At output of RX;		0.6		dB
$E_{EQ\_3Gbs\_MAX\_LT}$	Maximum Fixed EQ gain (AC - DC)	At 1.5GHz; 3Gbps CTLE; EQ15; DC Gain = 0dB; Limited Mode; At output of RX;		12		dB
$E_{EQ\_3Gbps\_MIN\_LT}$	Minimum Fixed EQ gain (AC - DC)	At 1.5GHz; 3Gbps CTLE; EQ0; DC Gain = 0dB; Limited Mode; At output of RX;		0.8		dB
R_{INT}	Input differential impedance when termination is enabled	At TTP2; HPD_IN = H; 0℃ ≤ T_A ≤ 70℃	90	100	110	Ω
R_{INT}	Input differential impedance when termination is enabled	At TTP2; HPD_IN = H; −20℃ ≤ T_A ≤ 85℃	85	100	115	Ω
HDMI HIGH SPEED OUTPUTS (Limited Mode)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{OL_open}	Single-ended low-level output voltage for DR ≤ 1.65Gbps data rate	DR = 270 Mbps; HPD_IN = H; AC_EN = L (DC-coupled); TXSWG = "F" (1000mV); TXPRE = "F" (0dB); TX termination open; VCC_EXT = 3.3V; 25℃ ≤ T$_A$ ≤ 85℃;	2.7		2.9	V
V_{OL_300}	Single-ended low-level output voltage 1.65Gbps < DR ≤ 3.4Gbps.	DR = 3.4Gbps; HPD_IN = H; AC_EN = L (DC-coupled); TXSWG = "F" (1000mV); TXPRE = "F" (0dB); TX termination 300Ω; VCC_EXT = 3.3V; 25℃ ≤ T$_A$ ≤ 85℃;	2.6		2.9	V
V_{OL_DAT20}	Data lane single-ended low-level output voltage 3.4Gbps < DR ≤ 6Gbps.	DR = 5.94Gbps; HPD_IN = H; AC_EN = L (DC-coupled); TXSWG = "F" (1000mV); TXPRE = "F" (0dB); VCC_EXT = 3.3V; 25℃ ≤ T$_A$ ≤ 85℃;	2.3		2.9	V
$V_{SWING\_DA\_14}$	Single-ended output voltage swing on data lanes with TX term set to open.	DR = 1.5Gbps; HPD_IN = H; AC_EN = L (DC-coupled); TXSWG = "F" (1000mV); TXPRE = "F" (0dB); VCC_EXT = 3.3V; 25℃ ≤ T$_A$ ≤ 85℃;	400	500	600	mV
$V_{SWING\_DA\_14}$	Single-ended output voltage swing on data lanes with TX term set to 300Ω.	DR = 3.4Gbps;HPD_IN = H; AC_EN = L (DC-coupled); TXSWG = "F" (1000mV); TXPRE = "F" (0dB); VCC_EXT = 3.3V; 25℃ ≤ T$_A$ ≤ 85℃;	400	500	600	mV
$V_{SWING\_DA\_20}$	Single-ended output voltage swing on data lanes for HDMI2.0 operation.	DR = 5.94Gbps;HPD_IN = H; AC_EN = L (DC-coupled); TXSWG = "F" (1000mV); TXPRE = "F" (0dB); VCC_EXT = 3.3V; 25℃ ≤ T$_A$ ≤ 85℃;	400	500	600	mV
$V_{SWING\_CLK\_14\_OPEN}$	Single-ended output voltage swing on clock lane for DR ≤ 3.4Gbps datarate	HPD_IN = H; AC_EN = L (DC-coupled); TXSWG = "F" (1000mV); TXPRE = "F" (0dB); VCC_EXT = 3.3V; 25℃ ≤ T$_A$ ≤ 85℃; TERM set to open;	400	500	600	mV
$V_{SWING\_CLK\_20}$	Single-ended output voltage swing on clock lane for HDMI 2.0	HPD_IN = H; AC_EN = L (DC-coupled); TXSWG = "F" (1000mV); TXPRE = "F" (0dB); VCC_EXT = 3.3V; 25℃ ≤ T$_A$ ≤ 85℃;	300	400	600	mV
$V_{OCM-DC-ON}$	FRL DC common mode voltage when actively transmitting	At TTP4; AC_EN = L or H; LTP5, 6, 7 or 8; TXFFE0; 25℃ ≤ T$_A$ ≤ 85℃;	2.335		3.495	V
$V_{OCM-DC-OFF}$	FRL DC common mode voltage when lane 3 is disabled	At TTP4; FRL 3 lane mode; AC_EN = L or H; 25℃ ≤ T$_A$ ≤ 85℃;	2.335		3.495	V
V_{OD_3G}	Data lanes Differential output swing	At TTP4; 2.97Gbps; HPD_IN = H; AC_EN = L or H; TXSWG = "F" (1000mV); TXPRE = "F" (0dB); 25℃ ≤ T$_A$ ≤ 85℃;	400		1560	mV
V_{OD_6G}	Data lanes Differential output swing	At TTP4_EQ; 5.94Gbps; HPD_IN = H; AC_EN = L or H; TXSWG = "F" (1000mV); TXPRE = "F" (0dB); 25℃ ≤ T$_A$ ≤ 85℃;	150		1560	mV
$V_{OD\_12G\_FRL}$	Data lanes Differential output swing at 12 G FRL.	At TTP4_EQ; 12Gbps; HPD_IN = H; AC_EN = L or H; TXSWG = "F" (1000mV); TXFFE0; 25℃ ≤ T$_A$ ≤ 85℃;	100		1560	mV
I_{LEAK}	Failsafe condition leakage current	V$_{CC}$ = 0V; DC-coupled; TMDS output pulled to 3.465V with 50 Ω resistors			35	μA
I_{OS}	Short circuit current limit	OUT_CLK, OUT_D[2:0] outputs P or N shorted to GND			70	mA
R_{TERM14}	Internal termination for DR ≤ 3.4Gbps when DC-coupled	TERM = 1h; AC_EN = L (DC-coupled);HPD_IN=H; Active state; –20℃ ≤ T$_A$ ≤ 85℃;	235	295	375	Ω

RCLKOUT						
$V_{TX\text{-}CM}$	Output common mode voltage		2.4	2.8	3.465	V
V_{ODPP}	Peak-to-peak output voltage swing		600	700	1100	mV
R_{TERM}	Differential output impedance		70	100	120	Ω
t_{RF}	Rise and fall time	20% to 80%	100		370	ps
C_{TX_AC}	Required external AC capacitor		8	10	12	nF

5.6 Timing Requirements

		MIN	NOM	MAX	UNIT
Local I2C (SCL/CFG0, SDA/CFG1). Refer to 図 6-9.					
f_{SCL}	I2C clock frequency			1	MHz
t_{BUF}	Bus free time between START and STOP conditions	0.5			µs
t_{HD_STA}	Hold time after repeated START condition. After this period, the first clock pulse is generated	0.26			µs

5.6 Timing Requirements (続き)

		MIN	NOM	MAX	UNIT
t_{LOW}	Low period of the I²C clock	0.5			µs
t_{HIGH}	High period of the I²C clock	0.26			µs
t_{SU_STA}	Setup time for a repeated START condition	0.26			µs
t_{HD_DAT}	Data hold time	0			µs
t_{SU_DAT}	Data setup time	50			ns
t_R	Rise time of both SDA and SCL signals			120	ns
t_F	Fall time of both SDA and SCL signals	4		120	ns
t_{SU_STO}	Setup time for STOP condition	0.26			µs
DDC Snoop I2C Timings. Refer to 図 6-9.					
f_{SCL}	I²C DDC clock frequency			100	kHz
t_{BUF}	Bus free time between START and STOP conditions	4.7			µs
t_{HD_STA}	Hold time after repeated START condition. After this period, the first clock pulse is generated	4			µs
t_{LOW}	Low period of the I²C clock	4.7			µs
t_{HIGH}	High period of the I²C clock	4			µs
t_{SU_STA}	Setup time for a repeated START condition	4.7			µs
t_{HD_DAT}	Data hold time	0			µs
t_{SUDAT}	Data setup time	250			ns
t_R	Rise time of both SDA and SCL signals. Measured from 30% to 70%.			1000	ns
t_F	Fall time of both SDA and SCL signals Measured from 70% to 30%.			300	ns
t_{SU_STO}	Setup time for STOP condition	4			µs
C_{b_LV}	Capacitive load for each bus line on LV side			50	pF
Power-On. Refer to 図 6-1.					
t_{VCC_RAMP}	V_{CC} supply ramp. Measured from 10% to 90%.	0.10		50	ms
t_{D_PG}	Internal POR de-assertion delay			5	ms
t_{VIO_SU}	V_{IO} supply stable before reset[2] high.	100			µs
t_{CFG_SU}	Configuration pins[1] setup before reset[2] high.	0			µs
t_{CFG_HD}	Configuration pins[1] hold after reset[2]high.	500			µs

(1) Follow comprise the configuration pins: MODE, ADDR/EQ0, EQ1, TXSWG, TXSLEW, TXPRE, AC_EN, HPDOUT_SEL, DCGAIN
(2) Reset is the logical AND of internal POR and EN pin.

5.7 Switching Characteristics

over recommended voltage and operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
Redriver						
f_{HDMI14_open}	Maximum HDMI 1.4 clock frequency at which TX termination is assured to be open	HDMI1.4; 25MHz ≤ IN_CLK ≤ 340MHz; TXTERM_AUTO_HDMI14 = 0h; TERM = 2h; TX is DC-coupled;	165			MHz
f_{HDMI14_300}	Minimum HDMI 1.4 clock frequency at which TX termination is assured to be 300Ω	HDMI1.4; 25MHz ≤ IN_CLK ≤ 340MHz; TXTERM_AUTO_HDMI14 = 0h; TERM = 2h; TX is DC-coupled;			250	MHz
t_{AEQ_DONE}	Time from start of FRL link training to AEQ complete for 3Gbps.				0.7	ms
t_{AEQ_DONE}	Time from start of FRL link training to AEQ complete for 6Gbps, 8Gbps, 10Gbps, and 12Gbps				0.5	ms

5.7 Switching Characteristics (続き)

over recommended voltage and operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
t_{PD}	Propagation delay time	At TTP4;	90		220	ps
$t_{SK1(T)}$	Clock lane Intra-pair output skew with worse case skew at inputs	At TTP4; With 0.15 UI skew at input; At 6Gbps with 150MHz clock; TX termination 100Ω; Linear mode;			0.15	UI
$t_{SK1(T)}$	Data lane Intra-pair output skew with worse case skew at inputs	At TTP4; With 0.15 UI skew at input; At 12Gbps; LTP5, 6, 7, or 8; TXFFE0; TX termination 100Ω; Linear mode;			0.15	UI
$t_{SK1(T)}$	Clock lane Intra-pair output skew with zero intra-pair skew at inputs	At TTP4; No intra-pair skew at input; 6Gbps with 150MHz clock; TX termination 100Ω; Limited mode;		0.10	0.15	UI
$t_{SK1(T)}$	Data lane Intra-pair output skew with zero intra-pair skew at inputs	At TTP4; No intra-pair skew at input; At 12Gbps; LTP5, 6, 7, or 8; TXFFE0; TX termination 100Ω; Limited mode;		0.053	0.11	UI
$t_{SK2(T)}$	Inter-pair output skew	At TTP4; At 12Gbps; LTP5, 6, 7, or 8; TXFFE0;			30	ps
$t_{RF-CLK-14}$	Transition time (rise and fall time) for clock lane when operating at HDMI1.4	At TTP4; 20% to 80%; Clock Frequency = 300MHz;	75		600	ps
$t_{RF-CLK-20}$	Transition time (rise and fall time) for clock lane when operating at HDMI 2.0	At TTP4; 20% to 80%; Clock Frequency = 150MHz;	75		600	ps
t_{RF_14}	Transition time (rise and fall time) for data lanes when operating at HDMI 1.4	At TTP4; 20% to 80%; DR = 3Gbps; SLEW_HDMI14 = default; PRBS7 pattern; Clock Frequency = 300MHz;	75		195	ps
t_{RFDAT_20}	Transition time (rise and fall time) for data lanes when operating at HDMI 2.0	At TTP4; 20% to 80%; DR = 6Gbps; SLEW_HDMI20 = default; PRBS7 pattern; Clock Frequency = 150MHz;	42.5		115	ps
t_{SLEW_FRL}	Single-ended TX slew rate for data lanes when operating at HDMI 2.1 FRL	At TTP4; Slope at 50% level; All FRL DR up to 12Gbps; SLEW_HDMI21 = Default; clock pattern of 128 zeros and 128 ones;			16	mV/ps
t_{TRANS_3G}	Transition bit duration when de-emphasis/ pre-emphasis is enabled	At TTP4; DR = 3Gbps; Clock pattern of 128 zeros followed by 128 ones;	0.4		1	UI
t_{TRANS_6G}	Transition bit duration when de-emphasis/ pre-emphasis is enabled	At TTP4; DR = 6Gbps; Clock pattern of 128 zeros followed by 128 ones;	0.4		1	UI
t_{TRANS_8G}	Transition bit duration when de-emphasis/ pre-emphasis is enabled	At TTP4; DR = 8Gbps; Clock pattern of 128 zeros followed by 128 ones;	0.4		1	UI
t_{TRANS_10G}	Transition bit duration when de-emphasis/ pre-emphasis is enabled	At TTP4; DR = 10Gbps; Clock pattern of 128 zeros followed by 128 ones;	0.5		1.1	UI
t_{TRANS_12G}	Transition bit duration when de-emphasis/ pre-emphasis is enabled	At TTP4; DR = 12Gbps; Clock pattern of 128 zeros followed by 128 ones;	0.6		1.3	UI
HPD						
t_{HPD_PD}	HPD_IN to HPD_OUT propagation delay	Refer to 図 6-7			100	µs
$t_{HPD\_PWRDOWN}$	HPD_IN debounce time before declaring Powerdown. Enter Powerdown if HPD_IN is low after debounce time.	Refer to 図 6-7	2		4	ms
$t_{HPD\_STANDBY}$	HPD_IN debounce time required for exiting Powerdown to Standby. Exit Powerdown if HPD_IN is high after debounce time.	Refer to 図 6-8	2		4	ms
Standby						
$t_{STANDBY\_ENTRY}$	Detection of electrical idle to entry into Standby.	HPD_IN = H;			300	µs
t_{SIGDET_DB}	Maximum differential signal glitch time rejected during debounce before transitioning from standby to active	HPD_IN = H;			25	µs

7 Detailed Description

7.1 Functional Block Diagram
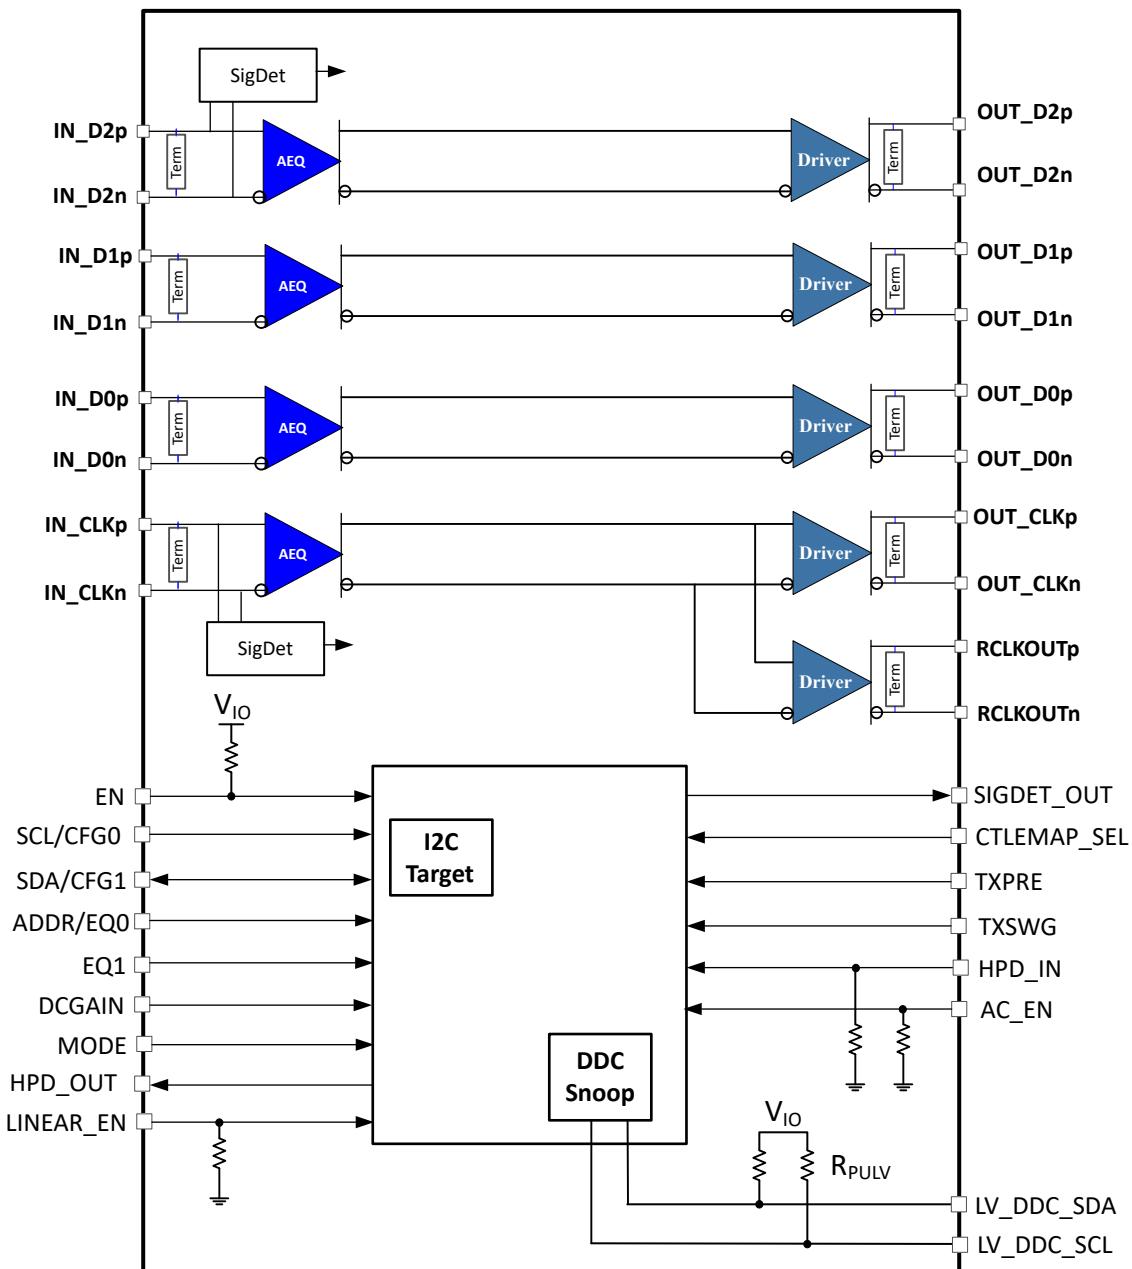

7.2 Feature Description

7.2.1 4-Level Inputs

The TMDS1204 has 4-level inputs pins that control the receiver equalization gain, transmitter voltage swing, and pre-emphasis, and place TMDS1204 into different modes of operation. These 4-level inputs utilize a resistor divider to help set the 4 valid levels and provide a wider range of control settings. There are internal pull-up and a pull-down resistors. These resistors are combined with the external resistor connection to achieve the desired voltage level.

表 7-1. 4-Level Control Pin Settings

LEVEL	SETTINGS
0	Tie 1kΩ 5% to GND.
R	Tie 20kΩ 5% to GND.
F	Float (leave pin open)
1	Tie 1kΩ 5% to V$_{CC}$.

注

図 6-1 shows how all 4-level inputs are latched after the rising edge of the EN pin. After these pins are sampled, the internal pull-up and pull-down resistors will be isolated to save power.

7.2.2 I/O Voltage Level Selection

The TMDS1204 supports 1.2V, 1.8V, and 3.3V LVCMOS levels. The VIO pin is used to select which voltage level is used for the following 2-level control pins: LV_DDC_SDA, LV_DDC_SCL, SCL/CFG0, and SDA/CFG1.

The AC_EN pin threshold is fixed at 3.3V LVCMOS levels. EN pin threshold is fixed at 1.2V LVCMOS threshold.

表 7-2. Selection of LVCMOS Signaling Level

VIO pin	LVCMOS Signaling Level
VALUE < 1.5V	1.2V
1.5V < VALUE < 2.5V	1.8V
VALUE > 2.5V	3.3V

7.2.3 HPD_OUT

The TMDS1204 will level shift the 5V signaling level present on the HPD_IN pin to a lower voltage such as 1.8V or 3.3V levels on the HPD_OUT pin. The HPD_OUT supports both push-pull and open drain. The default operation is push-pull. Selection between push-pull and open drain is done through the HPDOUT_SEL register.

表 7-2 lists how the VIO determines the output level of HPD_OUT when HPD_OUT is configured for push-pull operation. Please note push-pull operation is not supported for VIO less than 1.7V.

注

Open-drain operation is only supported when TMDS1204 is configured for I2C mode.

When EN pin is low, the HPD_OUT pin will be in a high impedance state. It is recommended to have a weak pull-down resistor (such as 220k) on HPD_OUT.

7.2.4 Lane Control

The TMDS1204 has various lane control features. Pin strapping globally controls features like receiver equalization, DC Gain, V$_{OD}$ swing, slew rate, and pre-emphasis or de-emphasis. Through I^{2}C receiver equalization, transmitter swing, and pre-emphasis for each lane can be independently controlled.

7.2.5 Swap

図 7-1 shows how TMDS1204 incorporates a swap function which can swap the lanes. The RX EQ, pre-emphasis, termination, and slew configurations will follow the new mapping. This function is supported in pin strap mode as well as when TMDS1204 is configured for I²C mode. A register controls the swap function in I²C mode.

表 7-3. Swap Functions

Normal Operation CFG1 pin = L or LANE_SWAP Register is 0h	CFG1 = H or LANE_SWAP Register is 1h

Copyright © 2018, Texas Instruments Incorporated

図 7-1. TMDS1204 Swap Function

7.2.6 Linear and Limited Redriver

The TMDS1204 supports both linear and limited redriver. Selection between linear and limited can be done from the LINEAR_EN pin in pin-strap mode or through GLOBAL_LINR_EN register in I²C mode.

The limited redriver mode will decouple TMDS1204 transmitter's voltage swing, pre-emphasis or de-emphasis, and slew rate from the GPUs transmitter. This allows the GPU to use a lower power TX setting and depends on the TMDS1204 transmitter to meet TX compliance requirements. For source applications, it is recommended to configure TMDS1204 as a limited redriver. It is not recommended to use limited redriver mode in sink applications.

Unlike limited redriver mode, in linear redriver mode the TMDS1204 transmitter's output is not decoupled from the GPU's transmitter. In linear redriver mode, the TMDS1204 transmitter's output is a linear function of its input. The linear redriver mode offers transparency to link training which makes it perfect for HDMI 2.1 applications. For HDMI sink applications, it is recommended to configure TMDS1204 as a linear redriver.

表 7-4 lists the requirements that the GPU transmitter must meet if linear redriver mode is used in an HDMI 2.1 source application. Linear redriver mode should only be used for HDMI 2.1 data rates. For HDMI 1.4 and 2.0, the TMDS1204 should be configured for limited mode (LINEAR_EN = "0" or "1").

表 7-4. Linear Redriver Mode: GPU TX Requirements for HDMI Source Applications

GPU TX Parameter	Min	Max	Units
Single-ended TX swing for HDMI 2.1	400	500	mV
TX rise/fall time for 3, 6, 8, 10, and 12Gbps FRL		16	mV/ps

The TMDS1204 in pin-strap mode provides the option to dynamically switch between limited and linear based on the HDMI mode of operation. The feature is enabled by setting LINEAR_EN pin = "1".

表 7-5. Pin-Strap Mode LINEAR_EN Pin Function

LINEAR_EN Pin Level	HDMI 1.4, 2.0, or DP	HDMI 2.1 FRL
1	Limited Enabled	Linear Enabled
F	Linear Enabled Recommended for DP and HDMI sink application.	Linear Enabled Recommended for DP and HDMI sink application.
R	Reserved	Reserved
0	Limited Enabled. Recommended for HDMI source application	Limited Enabled Recommended for HDMI source application

7.2.7 Main Link Inputs

Each main link input (IN_D[2:0] and IN_CLK) is internally biased to 3.3V through approximately 100Ω (50Ω single-ended). When using TMDS1204 in DisplayPort++ applications, external AC-coupling capacitance should be used. When using TMDS1204 in an HDMI application such as in an HDMI monitor, the main link inputs can be DC-coupled to a compliant HDMI transmitter. Each input data channel contains an equalizer to compensate for cable or board losses.

7.2.8 Receiver Equalizer

The equalizer is used to clean up inter-symbol interference (ISI) jitter or loss from the bandwidth-limited board traces or cables. TMDS1204 supports fixed receiver equalizer by setting the EQ0 and EQ1 pins or through the I²C register. 表 7-6 lists the pin strap settings and EQ values.

The TMDS1204 has three sets of CTLE curves (3Gbps CTLE, 6Gbps CTLE, and 12Gbps CTLE) with each curve having 16 AC gain settings and 3 DC gain settings. 表 7-6 provides details about the 16 AC gain settings with GLOBAL_DCG = 0x2.

The TMDS1204 in pin-strap mode has three CTLE HDMI Datarate Maps: Map A, Map B, and Map C. 表 7-7 provides details about these maps. The expectation is Map A and C should be used if TMDS1204 is used in a source application and Map B for a sink application.

表 7-8 lists how the sampled state of the CTLEMAP_SEL pin determines the default CTLE HDMI Datarate map when the TMDS1204 is configured for pin-strap mode.

In I²C mode, the default CTLE (3Gbps, 6Gbps, or 12Gbps) used for each HDMI mode can be controlled from a register.

7	7.7	6.8	5.8	R	1
8	9.0	7.5	6.5	F	0
9	9.5	8.2	7.5	F	R
10	10.0	8.8	8.3	F	F
11	10.5	9.3	9.1	F	1
12	11.0	10.0	9.8	1	0
13	11.5	10.5	10.3	1	R
14	12.0	11.0	11.0	1	F
15	12.3	11.8	11.6	1	1

(1)   CLK_EQ, D0_EQ, D1_EQ, and D2_EQ registers determine the receiver EQ setting in I2C mode.
(2)   When CTLEBYP_EN = 1 and DCGAIN = 0dB, EQ settings 0 will be 0dB due to the CTLE is bypassed.

表 7-7. CTLE HDMI Datarate Map A, B, and C

HDMI Mode	Map A	Map B	Map C
1.4	12Gbps CTLE	3Gbps CTLE	6Gbps CTLE
2.0	12Gbps CTLE	6Gbps CTLE	6Gbps CTLE
3Gbps FRL	12Gbps CTLE	3Gbps CTLE	6Gbps CTLE
6Gbps FRL	12Gbps CTLE	6Gbps CTLE	6Gbps CTLE
8Gbps FRL	12Gbps CTLE	12Gbps CTLE	12Gbps CTLE
10Gbps FRL	12Gbps CTLE	12Gbps CTLE	12Gbps CTLE
12Gbps FRL	12Gbps CTLE	12Gbps CTLE	12Gbps CTLE

表 7-8. Pin-strap Mode CTLE HDMI Datarate Mapping

	Sampled State of CTLEMAP_SEL pin			
	"0"	"R"	"F"	"1"
CTLE HDMI Datarate Map	Map B	Map C	Map B	Map A

注

The clock lane EQ when operating in HDMI 1.4 or 2.0 will use the 3Gbps CTLE and will be set to the zero EQ setting.

7.2.9 CTLE Bypass

The TMDS1204 will operate as a buffer when CTLE bypass is enabled. In pin-strap mode, this feature is disabled. In I2C mode, this feature is enabled when CTLEBYP_EN = 1h and GLOBAL_DCG = 2h. Any lane that has EQ setting of 0h will operate in CTLE bypass.

7.2.10 Adaptive Equalization in HDMI 2.1 FRL

The TMDS1204 supports adaptive equalization (AEQ) for HDMI 2.1 FRL. It does not support AEQ for HDMI 1.4 or 2.0. In HDMI 1.4 and HDMI 2.0 modes, TMDS1204 will use the sampled state of the EQ[1:0] pins or value programmed into the register. The AEQ is supported in some pin-strap modes as well as in I^2C mode. In I^2C mode, AEQ can be enabled by setting the AEQ_EN register. The TMDS1204 adaptation algorithm scans through available equalization settings searching for a setting for which the incoming high-speed signal is not over equalized.

The TMDS1204 will perform adaptive equalization when FRL link training begins. It will also re-adapt each time the data rate changes. The adaption will only occur during the TXFFE0 portion of FRL link training when LTP5, LTP6, LTP7, or LTP8 is being received. The TMDS1204 adaption will complete within t_{AEQ_DONE} from the time FRL link training begins. If the sink requests additional TXFFE levels (TXFFE1, 2, or 3), then the TMDS1204 will keep its equalizer settings fixed at the value adapted during TXFFE0. If for some reason the FRL link training fails and transitions to legacy mode (HDMI 1.4 or HDMI 2.0), then the EQ [1:0] pins sample the EQ settings that the TMDS1204 switches to if in pin-strap mode or programmed into the register (if in I2C mode).

The TMDS1204 will keep OUT_D[2:0] and OUT_CLK disabled until after adaptation completes. After adaptation completes, the appropriate lanes will be enabled. In I^2C mode, this behavior can be overridden by clearing the AEQ_TX_DELAY_EN field.

表 7-9. Adaptive Equalization Enable and Disable

	CTLEMAP_SEL pin level			
MODE pin level	**0**	**R**	**F**	**1**
0	AEQ disabled	AEQ disable	AEQ disabled	AEQ disabled
R	AEQ disabled	AEQ disabled	AEQ enabled	AEQ enabled
F	I^2C register	I^2C register	I^2C register	I^2C register
1	AEQ disabled	AEQ disabled	AEQ enabled	AEQ enabled

注

The AEQ operates only on IN_D0 pins (pins 12 and 13). The EQ value determined by AEQ will be applied to the other FRL data lanes.

7.2.10.1 HDMI 2.1 TX Compliance Testing with AEQ Enabled

Care must be taken when performing HDMI 2.1 TX compliance testing with AEQ enabled. Because the TMDS1204 will only adapt to LTP5 through 8 during the TXFFE0 part of link training, it is important the test equipment initiate a FRL link training before performing any TX measurements, especially TX eye and jitter measurement. After completion of FRL link training, the test equipment can then switch the current pattern (LTP5, LTP6, LTP7, or LTP8) to the desired test pattern (LTP1, LTP2, LTP3, or LTP4). If the test equipment request LTP1, LTP2, LTP3, or LTP4 before initiating link training, the TMDS1204 will use the sampled state of EQ[1:0] pins.

The following HDMI 2.1 TX tests use LTP5, LTP6, LTP7, and LTP8 as the required pattern for the measurement: HFR1-1, HFR1-2, HFR1-4, HFR1-7, and HFR1-8. If the TMDS1204 AEQ adaption has not completed and instead uses sampled state of EQ[1:0] pins, then it is possible these tests may fail or inaccurately represent system performance.

7.2.11 HDMI 2.1 Link Training Compatible Rx EQ

This mode is recommended in source applications in which the GPU is unaware of the TMDS1204 presence and will adjust its transmitter levels (VOD, de-emphasis, and pre-shoot) during HDMI 2.1 FRL link training. This mode is only supported if the TMDS1204 is enabled for limited redriver. 表 7-10 lists the TXFFE levels that this mode assumes the GPU is using.

This feature is supported in I^{2}C mode and all pin-strap modes with the exception of MODE = "0".

In HDMI 2.1 with AEQ disabled, the TMDS1204 will initially set the RX EQ based on the EQ0 and EQ1 pins. The pins determine what value will be used when the TXFFE0 is snooped during FRL link training. 表 7-11 lists how TMDS1204 uses the EQ setting for each increase in TXFFE level (TXFFE1, 2, or 3) from the sampled state of the EQ [1:0] pins.

When HDMI 2.1 with AEQ is enabled, the TMDS1204 will adapt during the TXFFE0 portion of FRL link training. 表 7-11 lists how TMDS1204 uses the EQ setting for each increase in TXFFE level (TXFFE1, 2, or 3) from the adapted EQ value.

表 7-10. Recommended GPU FRL TXFFE Levels

GPU FRL TXFFE Levels	Pre-Shoot (dB)	De-Emphasis (dB)
TXFFE0	2.18	−3.10
TXFFE1	2.50	−4.43
TXFFE2	2.92	−6.02
TXFFE3	3.52	−7.96

表 7-11. Link Training Compatible RX EQ Adjustments

Initial EQ Setting from sampled state of EQ[1:0] pins or adapted EQ value	EQ Setting Used for TXFFE1	EQ Setting Used for TXFFE2	EQ Setting Used for TXFFE3

15	11	9	5

7.2.12 Input Signal Detect

When standby is enabled and swap is disabled, the TMDS1204 waits for a signal on either IN_CLK (if HDMI 1.4 or 2.0) or IN_D2 (if HDMI 2.1). When standby is enabled and swap is enabled, the TMDS1204 looks for a signal on either IN_CLK (if HDMI 2.1) or IN_D2 (if HDMI 1.4 or 2.0). The TMDS1204 is fully functional when a signal is detected. If no signal is detected, then the device reenters standby state waiting for a signal again. In the standby state, all of the TMDS outputs are in high-Z status. In both pin-strap mode and I^{2}C mode, standby is enabled by default. In I^{2}C mode, standby can be disabled by setting the STANDBY_DISABLE register mode.

7.2.12.1 SIGDET_OUT Indicator

When standby state is enabled, the TMDS1204 will assert the SIGDET_OUT pin low whenever the TMDS1204 exits the standby state and will de-assert it when entering power down or standby state. If used, the SIGDET_OUT requires an external pull-up resistor of 10-kΩ or greater.

7.2.13 Main Link Outputs

7.2.13.1 Transmitter Bias

The TMDS1204 transmitter supports both external (DC-coupled) and internal bias (AC-coupled) to a receiver. Selection between DC and AC-coupled is done through use of the AC_EN pin in pin-strap mode and TX_AC_EN register in I^{2}C mode. The AC_EN pin informs the TMDS1204 whether or not an external AC-coupling capacitor is present. When AC_EN is greater than VIH, then TMDS1204 transmitters are internally biased to approximately V$_{CC}$. For DisplayPort, HDMI 2.1 FRL AC-coupled, or any other AC-coupled application, the AC_EN pin should be connected to greater than VIH and an external AC-coupling capacitor should be placed on each of the OUT_D[2:0] pins and the OUT_CLK pin. If the AC_EN pin is connected to less than VIL, then the AC_EN pin will inform TMDS1204 that AC_EN pin is DC-coupled (externally biased) to the far-end HDMI compliant receiver.

注

図 7-3 shows that if using AC-coupled TX mode (AC_EN = high) in an HDMI source application, then an external 499 Ω pull-down to GND must be placed on each OUT pin (OUT_D2:0p/n and OUT_CLKp/n) between the AC-coupling capacitor and the HDMI receptacle. The purpose of the 499 Ω resistor is to set the common mode voltage to HDMI compliant levels.
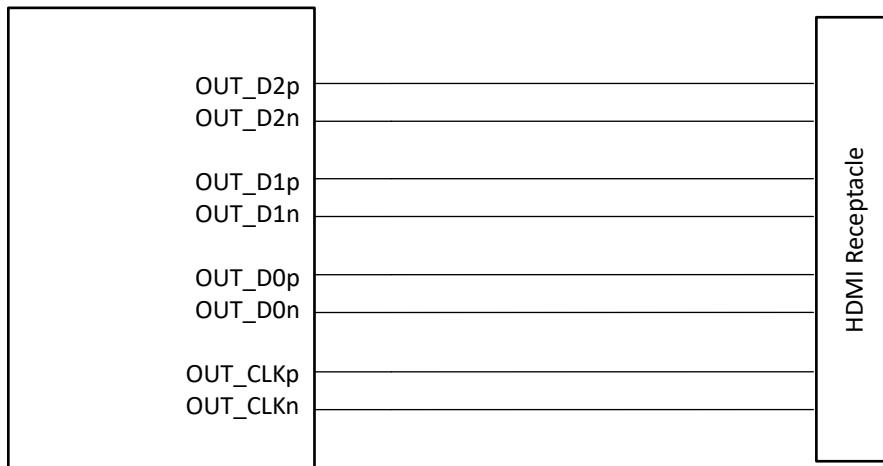

図 7-2. DC-Coupled TX in HDMI Source Application (AC_EN = Low). External ESD is Not Shown.

Product Folder Links: *TMDS1204*

English Data Sheet: SLLSF57
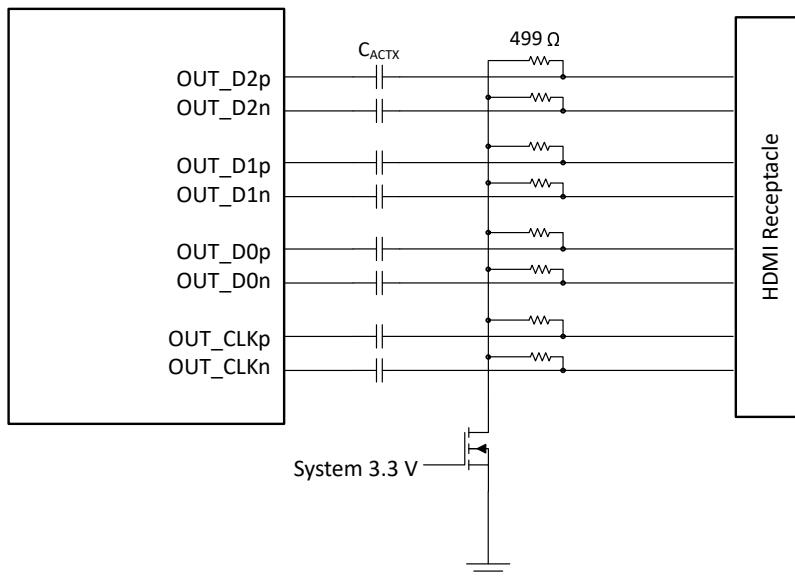

図 7-3. AC-Coupled TX in HDMI Source Application (AC_EN = High). External ESD is Not Shown.

7.2.13.2 Transmitter Impedance Control

HDMI 2.0 standards require a source termination impedance approximately 100Ω for data rates > 3.4Gbps. HDMI 1.4b requires no source termination but has a provision for termination for higher data rates greater than 1.65Gbps. Enabling this termination is optional. 表 7-13 lists how the TMDS1204 terminations are controlled automatically when in pin strap mode. Depending on the MODE pin, the CFG0 pin can be used to select the HDMI 1.4 termination between open and 300Ω.

The TMDS1204 supports automatic selection between open and 300Ω termination when operating in HDMI 1.4. In pin-strap mode with CTL0 low, the TMDS1204 will enable open termination when HDMI clock frequency is less than f_{HDMI14_open} and will enable 300Ω termination when HDMI clock frequency is greater than f_{HDMI14_300}. TXTERM_AUTO_HDMI14 register controls this feature in I2C mode.

In I^{2}C mode, termination is controlled through the registers as provided in 表 7-12.

表 7-12. Source Termination Control in I2C mode

TX_AC_EN Register	TERM Register	TXTERM_AUTO_HDMI14 Register	Source Termination
0	00	X	None
0	01	X	Parallel ≅ 300Ω across P and N
0	10	X	Automatic. HDMI 2.0 or HDM 2.1. parallel ≅ 100Ω across P and N
0	10	1	Automatic. HDMI 1.4. parallel ≅ 300Ω across P and N
0	10	0	Automatic. HDMI 1.4. No termination if HDMI clock frequency is ≤ f_{HDMI14_open}.
0	10	0	Automatic. HDMI 1.4. Parallel ≅ 300Ω across P and N termination if HDMI clock frequency is ≥ f_{HDMI14_300}.
0	11	X	Parallel ≅ 100Ω across P and N
1	00	X	≅ 150Ω to supply (V_{CC}) on both P and N
1	01	X	≅ 150Ω to supply (V_{CC}) on both P and N
1	10	X	Automatic. ≅ 150Ω to supply (V_{CC}) on both P and N for HDMI 1.4. Otherwise ≅ 50Ω to supply (V_{CC}) on both P and N.
1	11	X	≅ 50Ω to supply (V_{CC}) on both P and N

表 7-13. Automatic Source Termination Control in Pin-Strap Mode

HDMI Mode	AC_EN pin	Source Termination
HDMI 1.4	0	None or parallel ≅ 300Ω across P and N depending on state of SCL/CFG0 pin
HDMI 2.0	0	Parallel ≅ 100Ω across P and N
HDMI 1.4	1	≅ 150Ω to supply (V_{CC}) on both P and N
HDMI 2.0	1	≅ 50Ω to supply (V_{CC}) on both P and N

7.2.13.3 TX Slew Rate Control

The TMDS1204 has the ability to slow down the TMDS output edge rates. In pin-strap mode, the TX slew rate can not be controlled. In I^2C mode, both clock and data lanes slew rate can be controlled from a register. 表 7-14 lists the supported settings for each slew rate register based on HDMI data rate. The TMDS1204 must be configured in limited redriver mode to control the TX slew rate.

表 7-14. I^2C Mode TX Slew Register Supported Settings

HDMI Datarate	SLEW_CLK Register	SLEW_3G Register	SLEW_6G Register	SLEW_8G10G12G Register
HDMI 1.4	3'b000 through 3'b011	3'b010 through 3'b101	N/A	N/A
HDMI 2.0	3'b000 through 3'b011	N/A	3'b011 through 3'b110	N/A
HDMI 2.1 3Gbps FRL	N/A	3'b010 through 3'b101	N/A	N/A
HDMI 2.1 6Gbps FRL	N/A	N/A	3'b011 through 3'b110	N/A
HDMI 2.1 8Gbps FRL	N/A	N/A	N/A	3'b100 through 3'b111
HDMI 2.1 10Gbps FRL	N/A	N/A	N/A	3'b110 through 3'b111
HDMI 2.1 12Gbps FRL	N/A	N/A	N/A	3'b111

7.2.13.4 TX Pre-Emphasis and De-Emphasis Control

The TMDS1204 provides pre-emphasis and de-emphasis on the data lanes allowing the output signal pre-conditioning to offset interconnect losses between the TMDS1204 outputs and a TMDS receiver. Pre-emphasis and de-emphasis is not implemented on the clock lane unless the TMDS1204 is in HDMI 2.1 FRL mode and at which time the clock lane becomes a data lane. There are two methods to implement pre-emphasis, pin strapping or through I^2C programming. TX pre-emphasis and de-emphasis control is only supported in limited mode.

When using pin strap mode, the TXPRE pin controls four different global pre-emphasis and de-emphasis values for all data lanes when TMDS1204 is operating in HDMI 1.4 or HDMI 2.0. 表 7-15 lists these pre-emphasis and de-emphasis values. In HDMI 2.1 FRL mode, the de-emphasis value used is based on the DDC TXFFE snooped value. 表 7-16 lists how the TMDS1204 uses the de-emphasis level for each TX FFE level.

表 7-15. Pin-Strap TXPRE Pin Function

	LINEAR_EN pin = "0"			LINEAR_EN pin = "F" or "1"	LINEAR_EN pin = "R"
TXPRE pin	HDMI 1.4 or HDMI 2.0	HDMI 2.1 FRL TXFF0 Level	AEQ ADJUSTMENT	AEQ ADJUSTMENT	AEQ ADJUSTMENT
0	3.5dB pre-emphasis	Refer to 表 7-16.	0	+1	0
R	-2.5dB de-emphasis	Refer to 表 7-16.	0	+4	0
F	0dB	Refer to 表 7-16.	0	0	0
1	6.0dB pre-emphasis	Refer to 表 7-16	0	+2	0

表 7-16. HDMI 2.1 FRL TX FFE Levels

FRL TX FFE Snooped Level	De-Emphasis (dB)
TXFFE0	-2.5
TXFFE1	-3.5
TXFFE2	-3.7
TXFFE3	-4.6

7.2.13.5 TX Swing Control

The TMDS1204 transmitter swing level can be adjusted in both pin strap and I^{2}C mode. In I^{2}C mode, TX swing settings are controlled independently for each lane (both clock and data) through registers.

In I2C mode, the TX swing used when operating in HDMI 1.4 and HDMI 2.0 can be independently controlled through HDMI14_VOD and HDMI20_VOD registers.

表 7-17 lists how the TXSWG pin adjusts the default 1000mV swing in pin strap mode with limited redeliver mode enabled. In HDMI 1.4 the TXSWG controls the swing for both the data and clock lanes. In HDMI 2.0, the TXSWG pin controls the data lanes while the clock lane will remain at the default value. In HDMI 2.1, the TXSWG pin controls data and clock lanes.

In pin-strap mode with linear enabled, the linearity range is fixed at the highest level (1200mVpp) and therefore TXSWG pin is not used. In I^{2}C mode, the linearity range can be adjusted from a register.

表 7-17. Pin Strap TXSWG Control

TXSWG pin	Limited Mode for HDMI 1.4	Limited Mode for HDMI 2.0	Limited Mode for HDMI 2.1	Linear Mode
0	Default (1000mVpp)	Default (1000mVpp)	Default + 10%	1200mVpp
R	Default − 5%	Default − 5%	Default − 5%	1200mVpp
F	Default (1000mVpp)	Default (1000mVpp)	Default (1000mVpp)	1200mVpp
1	Default (1000mVpp)	Default + 5%	Default + 5%	1200mVpp

7.2.13.6 Fan-out Buffer

In some applications the HDMI clock and data must be on separate paths. The TMDS1204 implements a fan-out buffer feature to support such applications. When the fan-out buffer feature is enabled, the TMDS1204 will output the HDMI clock on RCLKOUTp/n when operating in HDMI 1.4 or HDMI 2.0. The OUT_CLKp/n will be disabled. When operating in HDMI 2.1 FRL mode, the TMDS1204 will output FRL data3 on OUT_CLKp/n. RCLKOUTp/n will be disabled.

The feature is enabled in pin-strap mode when MODE pin = "R" or it can be enable through FANOUT_EN register when TMDS1204 is configured for I^{2}C mode.
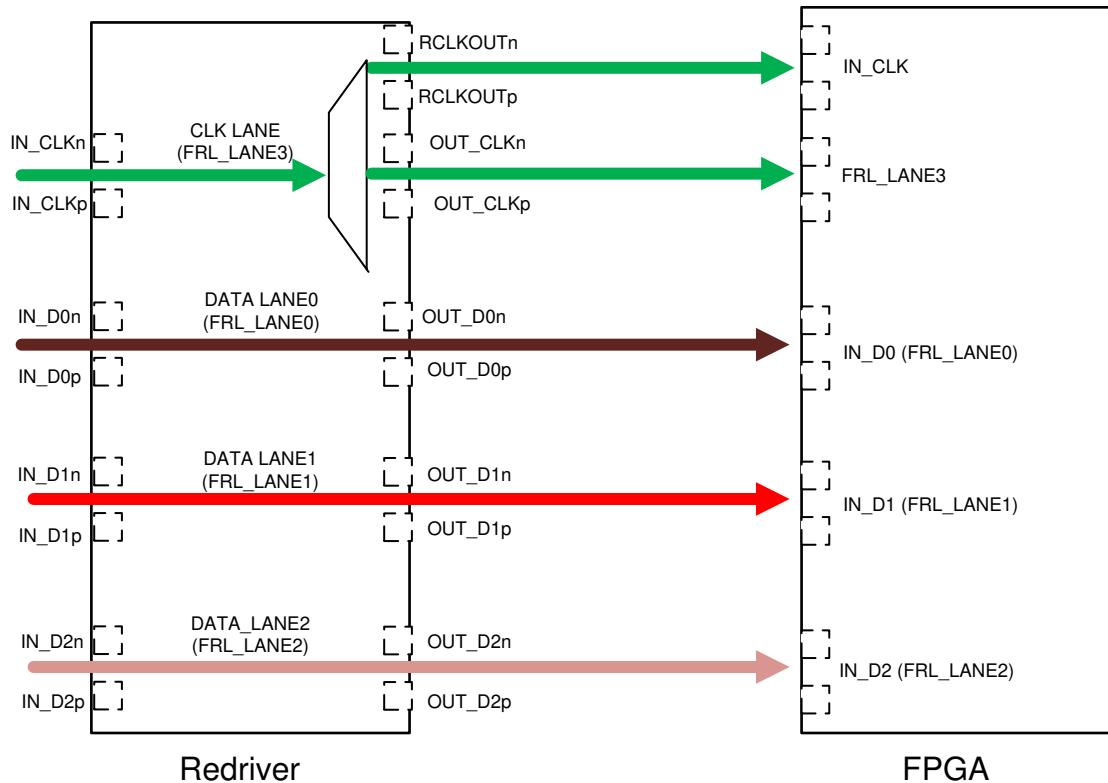

図 7-4. Fan-Out Buffer

注

Fan-out buffer feature will be disabled if SWAP is enabled.

7.2.14 HDMI DDC Capacitance

The HDMI specification limits the DDC bus capacitance to ≤ 50-pF for both an HDMI source and sink. Therefore, care must be taken to make sure the total capacitance of all components (TMDS1204, FR4 trace, ESD, source, and sink) is less than 50-pF.

If implementing a DDC level shifter using pass gates, then the total capacitance will include all components between source or sink and the HDMI receptacle. These components include and are not limited to Source or Sink, the FR4 trace, ESD components, and TMDS1204.

注

Trace capacitance can be in the range of 2 to 5-pF per inch. A general rule is a 50Ω FR4 trace will be around 3.3-pF per inch.

7.2.15 DisplayPort

The TMDS1204 supports DisplayPort at datarates up to 8.1Gbps (HBR3) when configured for either pin-strap and I^{2}C mode. In pin-strap mode, DisplayPort mode is enabled as provided in 表 7-18. In I^{2}C mode, DisplayPort mode is enabled when FRL_RATE field (offset 0x31) is programmed to 0x6, RATE_SNOOP_CTRL (offset 0xA bit 2) is disabled, and TXFFE_SNOOP_CTLE (offset 0xA bits 1:0) is disabled.

注

The TMDS1204 must be configured as a linear redriver when enabled for DisplayPort mode. The linear range should be programmed to highest level (Dx_VOD = 0x3 and CLK_VOD = 0x3). The TMDS1204 TX termination must be set to 100Ω (TERM = 0x3) and TX bias must be set to ac-coupled (TX_AC_EN = 0x1).

7.3 Device Functional Modes

7.3.1 MODE Control

The MODE pin provides four modes of operation. There are three pin-strap modes and one I2C mode. In all three pin strap modes, DDC snooping feature is enabled. In I2C mode, DDC snoop feature is enabled by default but can be disabled by a register.

7.3.1.1 I2C Mode (MODE = "F")

In I2C mode, all settings of the TMDS1204 can be controlled through the registers. The TMDS1204 7-bit I2C address is determined by the ADDR/EQ0 pin. All other 4-level and 2-level pins are not used in I2C mode since the functions exist in a register. The SCL/CFG0 pin will function as the I2C clock and the SDA/CFG1 pin will function as the I2C data.

The TMDS1204 defaults to power down in I2C mode. Upon completion of initialization of the TMDS1204, software must clear the PD_EN field to exit the power down state. The HPD_OUT pin will be asserted low while the PD_EN register is set.

The TMDS1204 supports 1.2V, 1.8V, and 3.3V I2C signaling levels. Selection of 1.2V, 1.8V, or 3.3V is determined by the VIO pin as provided in 表 7-2.

7.3.1.2 Pin Strap Modes

表 7-18 and 表 7-19 lists how the SCL/CFG0 and the SDA/CFG1 pins will be used to control the HDMI 1.4 termination, lane SWAP function, and the DisplayPort mode in pin-strap mode.

表 7-18. SCL/CFG0 Pin in Pin-Strap Mode

SCL/CFG0 Pin	AC_EN Pin	TMDS1204 Function
0	0	HDMI 1.4 termination is open if HDMI clock frequency ≤ f_{HDMI14_open}
0	0	HDMI 1.4 termination is ≅300Ω if HDMI clock frequency ≥ f_{HDMI14_300}
1	0	HDMI 1.4 termination is ≅300Ω
0	1	Normal HDMI. Function determined by MODE pin.
1	1	DisplayPort mode. DDC snoop disabled. All four lanes enabled when HPD_IN is high. 12Gbps CTLE used.

表 7-19. SDA/CFG1 Pin in Pin-Strap Mode

SDA/CFG1 Pin	TMDS1204 Function
0	Normal Lane ordering
1	Lane Swap enabled

注

The SCL/CFG0 is the only two-level pin that is continuously sampled in pin-strap mode. AC_EN, HPDOUT_SEL, and SDA/CFG1 will not be continuously sampled in pin-strap mode unless indicated otherwise.

The TMDS1204 must be configured as a linear redriver when operating in DisplayPort mode.

7.3.1.2.1 Pin-Strap: HDMI 1.4 and HDMI 2.0 Functional Description

The TMDS1204 will always use the sampled state of EQ[1:0] pins when operating in either HDMI 1.4 and HDMI 2.0. The amount of EQ applied is determined by the CTLE Map used (for more information, refer to セクション 7.2.8).

If TMDS1204 is configured for limited redriver mode, then the OUT_D[2:0] and OUT_CLKP/N levels will be fixed based on the sampled state of TXSWG pin (表 7-17 provides more information) and TXPRE pin (表 7-15 provides more information).

If TMDS1204 is configured for linear redriver mode, then OUT_D[2:0] and OUT_CLK will be a linear function of the input signals.

注

In source application, it is recommended to use limited redriver mode for both HDMI 1.4 and HDMI 2.0.

7.3.1.2.2 Pin-Strap HDMI 2.1 Function (MODE = "0"): Fixed Rx EQ

In this mode, the TMDS1204 will operate with a fixed RX EQ based on the value set by EQ0 and EQ1 pins.

As listed in 表 7-16, the outputs will be fixed to TXFFE0 in HDMI 2.1 FRL with limited redriver enabled. These outputs will not change based on the snooped value of TXFFE. This configuration is intended to be used in sink applications where the channel between sink and TMDS1204 is fixed.

注

Adaptive EQ is not supported in this mode (for more information refer to セクション 7.2.10). Link Training Compatible Rx EQ is not supported in this mode (for more information, refer to セクション 7.2.11).

7.3.1.2.3 Pin-Strap HDMI 2.1 Function (Mode = "1"): Flexible Rx EQ

In this mode, the TMDS1204 supports both Adaptive EQ (AEQ) (for more information, refer to セクション 7.2.10) and Link Training Compatible Rx EQ (for more information, refer to セクション 7.2.11).

If TMDS1204 is configured for limited redriver mode, the OUT_D[2:0] and OUT_CLK VOD level will be fixed based on the sampled state of TXSWG (表 7-17 provides more information). As provided in 表 7-16, the outputs will be fixed to TXFFE0 in HDMI 2.1 FRL. These outputs will not change based on the snooped value of TXFFE.

7.3.1.2.4 Pin-Strap HDMI 2.1 Function (Mode = "R"): Flexible Rx EQ and Fan-Out Buffer

This pin strap mode is the same as MODE ="1"except that the Fan-Out buffer is supported.

As shown in 図 7-4, the fan-out buffer feature is supported in this mode. The TMDS1204 will output HDMI clock on RCLKOUTp/n when operating in HDMI 1.4 and HDMI 2.0, and OUT_CLKp/n will be disabled in HDMI 1.4 and HDMI 2.0. In HDMI 2.1 FRL mode, the RCLKOUTp/n will be disabled and FRL data lane 3 will be the output through the TMDS1204 clock lane.

注

Fan-out buffer feature will be disabled if SWAP is enabled. In this pin strap mode, it is recommended to configure TMDS1204 in linear redriver mode.

English Data Sheet: SLLSF57

7.3.2 DDC Snoop Feature

As part of discovery the source reads the sink E-EDID information to understand the sink's capabilities. Part of this read is HDMI Forum Vendor Specific Data Block (HF-VSDB) located at target address 0xA8. From the LV_DDC_SDA and LV_DDC_SCL pins, the TMDS1204 DDC snoop function will monitor both reads and writes to specific offsets of the Status and Control Data Channel Structure (SCDCS) located within the HF-VSDB. The following SCDCS offsets are monitored: Update Flags at offset 10h, TMDS Configuration at offset 20h, Sink Configuration at offset 31h, Source Test Configuration at offset 35h, and Status Flags located at offsets 41h and 42h. The DDC snoop function resides on the LV_DDC_SDA and LV_DDC_SCL pins.

The TMDS1204 has similar SCDCS registers within its register space. Through TMDS1204 local I^{2}C interface, external microprocessor can control TMDS1204 to perform all the necessary functions required for each HDMI type.

7.3.2.1 HDMI Type

表 7-20 lists the TMDS1204 monitors offsets 20h and 31h to determine HDMI type as either HDMI 1.4, HDMI 2.0, or HDMI 2.1 FRL.

表 7-20. HDMI Type Selection

HDMI Type	TMDS_CLK_RATIO SCDCS Offset 20h[1]	FRL_RATE SCDCS Offset 31h[3:0]
HDMI 1.4 (TMDS x10)	0	0h
HDMI 2.0 (TMDS x40)	1	0h
HDMI 2.1 FRL	X	Not 0h

注
TMDS1204 will default to HDMI 1.4 following a power-on reset or whenever it enters the power down state. Upon exiting standby, the TMDS1204 will hold data rate value (HDMI 1.4, 2.0, or 2.1) prior to entering the standby.

7.3.2.2 HDMI 2.1 FRL Snoop

In HDMI 2.1 FRL mode, the TMDS1204 monitors offset 31h, 35h, 41h, and 42h. Each offset contains information that the TMDS1204 uses during FRL link training or during TX compliance testing.

Offset 31h contains FRL lane count (3 or 4 lanes), data rate (3, 6, 8, 10, or 12Gbps), and maximum TXFFE levels supported. TMDS1204 enables the appropriate number of lanes based on the lane count. The TMDS1204 uses the data rate information to determine the duration of the TXFFE de-emphasis. The maximum number of supported TXFFE levels sets the number of TXFFE levels TMDS1204 uses during FRL link training. 表 7-16 lists the TMDS1204 does support all four possible TXFFE levels (TXFFE0 through TXFFE3).

Values snooped from offset 35h is used by TMDS1204 during TX FFE compliance testing.

7.3.3 Low Power States

The TMDS1204 has two low power states: Power Down and Standby. 表 7-21 lists both lower power states. Power down is entered when HPD_IN is low for t$_{HPD\_PWRDOWN}$ or in I^{2}C if PD_EN bit is set. Power down is also entered when the EN pin is low. The TMDS1204 will exit power down to the standby state when HPD_IN is high for t$_{HPD\_STANDBY}$.

The TMDS1204 implements a two stage standby power process when HPD_IN is high.

Stage 1: if there is no signal (electrical idle) on the IN_CLK lane, and if HDMI 1.4/2.0 or IN_D2 if HDMI 2.1, then the TMDS1204 will enter Standby State within t$_{STANDBY\_ENTRY}$.

Stage 2: if a signal is detected which last longer than t$_{SIGDET\_DB}$, then TMDS1204 will declare a valid signal and exit standby within t$_{STANDY\_EXIT}$.

- If a signal is detected, then the TMDS1204 will go into normal active operation and signals present at IN_CLK and IN_D[2:0] inputs will be passed through to the OUT_CLK and OUT_D[2:0] outputs.
- If it is determined that no signal is present, then the TMDS1204 will reenter stage 1.

The TMDS1204 will exit standby state and immediately enter active state if LTP1, LTP2, LTP3, or LTP4 is snooped while monitoring status flags at SCDCS offset 41h or 42h.

The TMDS1204 will exit normal operation and return to the standby state within $t_{STANDBY\_ENTRY}$ anytime electrical idle is detected.

表 7-21. Power States

INPUTS					STATUS						
EN pin	HPD_IN pin	STANDBY_ DISABLE register	HPD_PWRDW N_DISABLE register	PD_EN register	HDMI 1.4/2.0: IN_CLK pin HDMI 2.1: IN_D2 pins	HPD_OUT pin	IN_Dx pins	SDA/SCL	OUT_Dx OUT_CLK	DDC	State

7.4 Programming

7.4.1 Pseudocode Examples

These are examples of configuring TMDS1204 when it is configured for I2C mode.

7.4.1.1 HDMI 2.1 Source Example with DDC Snoop Disabled and DDC Buffer Disabled

When using an external discrete DDC buffer with snooping disabled, this example can be used. In this example, adaptive EQ for HDMI 2.1 is disabled. Also, this example assumes the source only wants to support TXFFE0 level when operating in HDMI 2.1 FRL mode.

This example will initialize the following:
- Limited redriver mode with DC-coupled output
- TX slew rate for each data rate
- CTLE used for each data rate

```
// (address, data)
// Initial power-on configuration.
(0x0A, 0x05), // Rate snoop disabled and TXFFE controlled by 35h, 41h, and 42h
(0x0B, 0x23), // 3G and 6G tx slew rate control
(0x0C, 0x70), // HDMI clock and 8G10G12G TX slew rate control
(0x0E, 0x97), // HDMI 1.4, 2.0 and 2.1 CTLE selection
(0x11, 0x00), // Disable all four lanes.
(0x09, 0x00), // Take out of PD state. Should be done after initialization is complete.

// Selection between HDMI modes (1.4, 2.0, and 2.1)
switch (HDMI_MODE) {
    case 'HDMI14_165' : // HDMI 1.4 configuration for less than 1.65Gbps
        (0x11, 0x00), // Disable all four lanes.
        (0x0D, 0x20), // Limited mode, DC-coupled TX, 0dB DCG, Term open, disable CTLE bypass
        (0x12, 0x03), // Clock lane VOD and TXFFE
        (0x13, 0x00), // Clock lane EQ.
        (0x14, 0x03), // D0 lane VOD and TXFFE.
        (0x15, 0x0Y), // D0 lane EQ. Set "Y" to desired value.
        (0x16, 0x03), // D1 lane VOD and TXFFE.
        (0x17, 0x0Y), // D1 lane EQ. Set "Y" to desired value.
        (0x18, 0x03), // D2 lane VOD and TXFFE.
        (0x19, 0x0Y), // D2 lane EQ. Set "Y" to desired value.
        (0x20, 0x00), // Clear TMDS_CLK_RATIO
        (0x31, 0x00), // Disable FRL
        (0x11, 0x0F), // Enable all four lanes.
        break;
    case 'HDMI14_340' : // HDMI 1.4 configuration for greater than 1.65Gbps
        (0x11, 0x00), // Disable all four lanes.
        (0x0D, 0x21), // Limited mode, DC-coupled TX, 0dB DCG, Term 300, disable CTLE bypass
        (0x12, 0x03), // Clock lane VOD and TXFFE
        (0x13, 0x00), // Clock lane EQ.
        (0x14, 0x03), // D0 lane VOD and TXFFE.
        (0x15, 0x0Y), // D0 lane EQ. Set "Y" to desired value.
        (0x16, 0x03), // D1 lane VOD and TXFFE.
        (0x17, 0x0Y), // D1 lane EQ. Set "Y" to desired value.
        (0x18, 0x03), // D2 lane VOD and TXFFE.
        (0x19, 0x0Y), // D2 lane EQ. Set "Y" to desired value.
        (0x20, 0x00), // Clear TMDS_CLK_RATIO
        (0x31, 0x00), // Disable FRL
        (0x11, 0x0F), // Enable all four lanes.
        break;
    case 'HDMI20' :  // HDMI 2.0 configuration
        (0x11, 0x00), // Disable all four lanes.
        (0x0D, 0x23), // Limited mode, DC-coupled TX, 0dB DCG, Term 100, disable CTLE bypass
        (0x12, 0x03), // Clock lane VOD and TXFFE
        (0x13, 0x00), // Clock lane EQ.
        (0x14, 0x03), // D0 lane VOD and TXFFE.
        (0x15, 0x0Y), // D0 lane EQ. Set "Y" to desired value.
        (0x16, 0x03), // D1 lane VOD and TXFFE.
        (0x17, 0x0Y), // D1 lane EQ. Set "Y" to desired value.
        (0x18, 0x03), // D2 lane VOD and TXFFE.
        (0x19, 0x0Y), // D2 lane EQ. Set "Y" to desired value.
        (0x20, 0x02), // Set TMDS_CLK_RATIO
        (0x31, 0x00), // Disable FRL
```

```
        (0x11, 0x0F), // Enable all four lanes.
        break;
    case 'HDMI21_3G' : // HDMI 2.1 3Gbps FRL
        (0x11, 0x00), // Disable all four lanes.
        (0x0D, 0x23), // Limited mode, DC-coupled TX, 0dB DCG, Term 100, disable CTLE bypass
        (0x12, 0x03), // Clock lane VOD and TXFFE
        (0x13, 0x00), // Clock lane EQ.
        (0x14, 0x03), // D0 lane VOD and TXFFE.
        (0x15, 0x0Y), // D0 lane EQ. Set "Y" to desired value.
        (0x16, 0x03), // D1 lane VOD and TXFFE.
        (0x17, 0x0Y), // D1 lane EQ. Set "Y" to desired value.
        (0x18, 0x03), // D2 lane VOD and TXFFE.
        (0x19, 0x0Y), // D2 lane EQ. Set "Y" to desired value.
        (0x20, 0x00), // Clear TMDS_CLK_RATIO
        (0x31, 0x01), // Set to 3G FRL. Only TXFFE0 supported.
        (0x11, 0x0F), // Enable all four lanes.
        break;
    case 'HDMI21_6G_3lane' : // HDMI 2.1 6Gbps FRL 3 lanes

}
```

7.4.1.2 Sink Example

This example assumes TMDS1204 transmitters are DC-coupled to the HDMI sink. In this example, TMDS1204 will be configured for linear mode with adaptive EQ enabled and TMDS1204 will automatically determine HDMI data rate by snooping DDC traffic between the HDMI source and sink.

```
// (address, data)
// Initial power-on configuration.
(0x0A, 0x00), // Rate snoop and TXFFE snoop enabled.
(0x0B, 0x23), // 3G and 6G slew rate control
(0x0C, 0x00), // HDMI clock tx slew rate control
(0x0D, 0xA3), // Linear mode, DC-coupled TX, 0dB DCG, Term fixed at 100Ω, disable CTLE bypass
(0x0E, 0x97), // HDMI14, 2.0 and 2.1 CTLE selection
(0x12, 0x03), // Clock lane VOD and TXFFE
(0x13, 0x00), // Clock lane EQ.
(0x14, 0x03), // D0 lane VOD and TXFFE.
(0x15, 0x0Y), // D0 lane EQ. Set "Y" to desired value.
(0x16, 0x03), // D1 lane VOD and TXFFE.
(0x17, 0x0Y), // D1 lane EQ. Set "Y" to desired value.
(0x18, 0x03), // D2 lane VOD and TXFFE.
(0x19, 0x0Y), // D2 lane EQ. Set "Y" to desired value.
(0x1E, 0x40), // Enable AEQ
(0x09, 0x00), // Take out of PD state. Should be done after initialization is complete.
```

7.4.2 TMDS1204 I^{2}C Address Options

For further programmability, the TMDS1204 can be controlled using I^{2}C. The SCL/CFG0 and SDA/CFG1 terminals are used for I^{2}C clock and I^{2}C data respectively.

表 7-22. TMDS1204 I^{2}C Device Address Description

ADDR/EQ0 pin	Bit 7 (MSB)	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0 (W/R)	HEX
0	1	0	1	1	1	1	0	0/1	BC/BD
R	1	0	1	1	1	0	1	0/1	BA/BB
F	1	0	1	1	1	0	0	0/1	B8/B9
1	1	0	1	1	0	1	1	0/1	B6/B7

7.4.3 I^{2}C Target Behavior

図 7-5. I^{2}C Write with Data

Product Folder Links: *TMDS1204*

English Data Sheet: SLLSF57
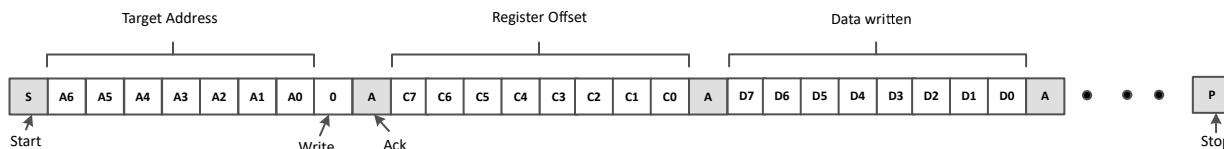

The following procedure should be followed to write data to TMDS1204 I^{2}C registers (refer to 図 7-5):

1. The controller initiates a write operation by generating a start condition (S), followed by the TMDS1204 7-bit address and a zero-value "W/R" bit to indicate a write cycle.
2. The TMDS1204 acknowledges the address cycle.
3. The controller presents the register offset within TMDS1204 to be written, consisting of one byte of data, MSB-first.
4. The TMDS1204 acknowledges the sub-address cycle.
5. The controller presents the first byte of data to be written to the I^{2}C register.
6. The TMDS1204 acknowledges the byte transfer.
7. The controller may continue presenting additional bytes of data to be written, with each byte transfer completing with an acknowledge from the TMDS1204.
8. The controller terminates the write operation by generating a stop condition (P).
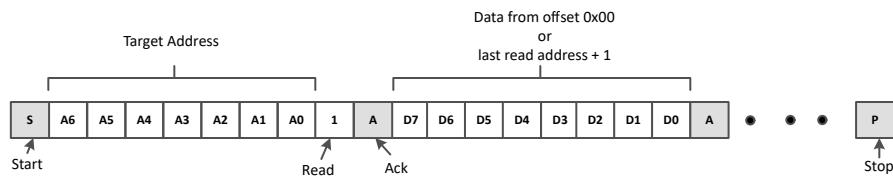

図 7-6. I2C Read Without Repeated Start

The following procedure should be followed to read the TMDS1204 I^{2}C registers without a repeated Start (refer to 図 7-6).

1. The controller initiates a read operation by generating a start condition (S), followed by the TMDS1204 7-bit address and a zero-value "W/R" bit to indicate a read cycle.
2. The TMDS1204 acknowledges the 7-bit address cycle.
3. Following the acknowledge the controller continues sending clock.
4. The TMDS1204 transmit the contents of the memory registers MSB-first starting at register 00h or last read register offset+1. If a write to the I^{2}C register occurred prior to the read, then the TMDS1204 shall start at the register offset specified in the write.
5. The TMDS1204 waits for either an acknowledge (ACK) or a not-acknowledge (NACK) from the controller after each byte transfer; the I^{2}C controller acknowledges reception of each data byte transfer.
6. If an ACK is received, then the TMDS1204 transmits the next byte of data as long as controller provides the clock. If a NAK is received, then the TMDS1204 stops providing data and waits for a stop condition (P).
7. The controller terminates the write operation by generating a stop condition (P).
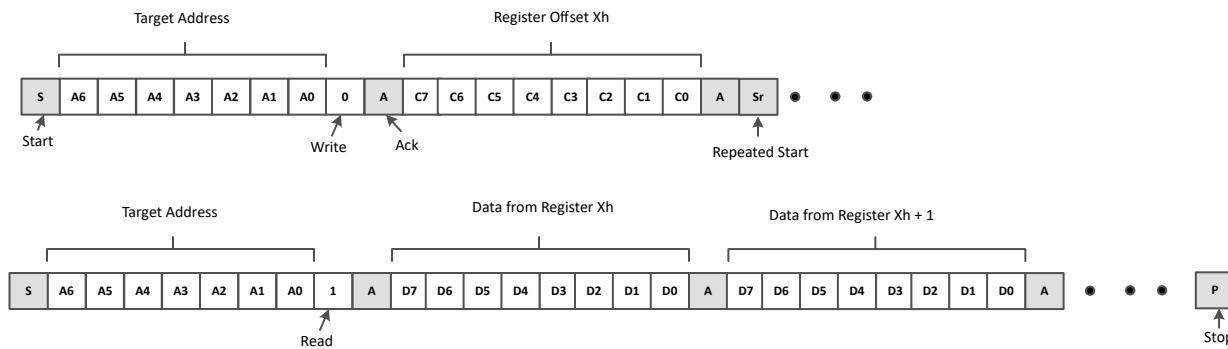

図 7-7. I2C Read with Repeated Start

The following procedure should be followed to read the TMDS1204 I^{2}C registers with a repeated Start (refer to 図 7-7).

1. The controller initiates a read operation by generating a start condition (S), followed by the TMDS1204 7-bit address and a zero-value "W/R" bit to indicate a write cycle.

Product Folder Links: *TMDS1204*

2. The TMDS1204 acknowledges the 7-bit address cycle.
3. The controller presents the register offset within TMDS1204 to be written, consisting of one byte of data, MSB-first.
4. The TMDS1204 acknowledges the register offset cycle.
5. The controller presents a repeated start condition (Sr).
6. The controller initiates a read operation by generating a start condition (S), followed by the TMDS1204 7-bit address and a one-value "W/R" bit to indicate a read cycle.
7. The TMDS1204 acknowledges the 7-bit address cycle.
8. The TMDS1204 transmit the contents of the memory registers MSB-first starting at the register offset.
9. The TMDS1204 shall wait for either an acknowledge (ACK) or a not-acknowledge (NACK) from the controller after each byte transfer; the I^{2}C controller acknowledges reception of each data byte transfer.
10. If an ACK is received, then the TMDS1204 transmits the next byte of data as long as controller provides the clock. If a NAK is received, then the TMDS1204 stops providing data and waits for a stop condition (P).
11. The controller terminates the read operation by generating a stop condition (P).
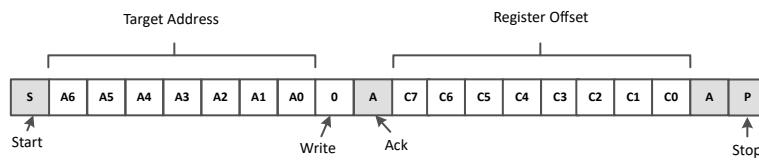

図 7-8. I2C Write Without Data

The following procedure should be followed for setting a starting sub-address for I^{2}C reads (refer to 図 7-8).

1. The controller initiates a write operation by generating a start condition (S), followed by the TMDS1204 7-bit address and a zero-value "W/R" bit to indicate a write cycle.
2. The TMDS1204 acknowledges the address cycle.
3. The controller presents the register offset within TMDS1204 to be written, consisting of one byte of data, MSB-first.
4. The TMDS1204 acknowledges the register offset cycle.
5. The controller terminates the write operation by generating a stop condition (P).

注

図 7-6 that if no register offset is included for the read procedure after initial power-up, then reads start at register offset 00h and continue byte by byte through the registers until the I2C controller terminates the read operation. During a read operation, the TMDS1204 auto-increments the I^{2}C internal register address of the last byte transferred independent of whether or not an ACK was received from the I2C controller.

7.5 Register Maps

7.5.1 TMDS1204 Registers

表 7-23 lists the memory-mapped registers for the TMDS1204 registers. All register offset addresses not listed in 表 7-23 should be considered as reserved locations and the register contents should not be modified.

表 7-23. TMDS1204 Registers

Offset	Acronym	Register Name	Section
8h	REV_ID	Revision ID	Go
9h	PD_RST	Power Down and Reset control	Go
Ah	MISC_CONTROL	Misc Control	Go
Bh	GBL_SLEW_CTRL	Global TX Slew control for data lanes in HDMI1.4 and 2.0	Go
Ch	GBL_SLEW_CTRL2	Global TX Slew control for data and clock	Go
Dh	GBL_CTRL1	Global control	Go

表 **7-23. TMDS1204 Registers (続き)**

Offset	Acronym	Register Name	Section
Eh	GBL_CTLE_CTRL	Global CTLE control	Go
11h	LANE_ENABLE	Lane enables	Go
12h	CLK_CONFIG1	CLK lane TX swing and FFE control	Go
13h	CLK_CONFIG2	CLK lane RX EQ control	Go
14h	D0_CONFIG1	D0 lane TX swing and FFE control	Go
15h	D0_CONFIG2	D0 lane RX EQ control	Go
16h	D1_CONFIG1	D1 lane TX swing and FFE control	Go

1Dh	AEQ_CONTROL1	Adaptive EQ control1	Go
1Eh	AEQ_CONTROL2	Adaptive EQ control2	Go
20h	SCDC_TMDS_CONFIG	SCDC TMDS Clock Ratio	Go
31h	SCDC_SINK_CONFIG	SCDC SNK FRL FFE and Rate	
35h	SCDC_SRC_TEST	SCDC Test	Go
41h	SCDC_STATUS10	Lanes 0 and 1 FRL Training Status	Go
42h	SCDC_STATUS32	Lanes 2 and 3 FRL Training Status	Go
50h	AEQ_STATUS	Adaptive EQ Status	Go
51h	AEQ_STATUS2	Adaptive EQ Status	Go

Complex bit access types are encoded to fit into small table cells. 表 7-24 shows the codes that are used for access types in this section.

表 **7-24. TMDS1204 Access Type Codes**

Access Type	Code	Description
Read Type		
R	R	Read
RH	R H	Read Set or cleared by hardware
Write Type		
W	W	Write
W1S	W 1S	Write 1 to set
WtoPH	W toPH	Write Pulse high
Reset or Default Value		
-n		Value after reset or the default value

7.5.1.1 REV_ID Register (Offset = 8h) [Reset = 03h]

REV_ID is shown in 表 7-25.

Return to the Summary Table.

表 7-25. REV_ID Register Field Descriptions

Bit	Field	Type	Reset	Description
7-0	REV_ID	RH	3h	Device revision.

7.5.1.2 PD_RST Register (Offset = 9h) [Reset = 01h]

PD_RST is shown in 表 7-26.

Return to the Summary Table.

表 7-26. PD_RST Register Field Descriptions

Bit	Field	Type	Reset	Description
7	SOFT_RST	WtoPH	0h	Writing a 1 to this field resets all fields
6	SCDC_SOFT_RST	WtoPH	0h	Writing a 1 to this field resets the fields in the SCDC registers 20h, 31h, 35h, 41h and 42h.
5	RESERVED	R	0h	Reserved
4	RESERVED	R/W	0h	Reserved
3	RESERVED	R	0h	Reserved
2	HPD_PWRDWN_DISABLE	R/W	0h	Mode to ignore HPD pin and always enter active state unless PD_EN is high 0h = Automatically enter power down based on HPD_IN 1h = Always remain in active state or Standby
1	STANDBY_DISABLE	R/W	0h	When high, standby state is disabled and the device will immediately enter active state with all lanes enabled when not in power down. When low, the device will enter standby state when exiting power down and wait for incoming data before entering active state. 0h = Standby state enabled 1h = Standby state disabled
0	PD_EN	R/W	1h	I2C power down. Software should clear this field after it has completed initialization. HPD_OUT will be asserted low when this field is set. 0h = Normal operation 1h = Forced power down by I2C

7.5.1.3 MISC_CONTROL Register (Offset = Ah) [Reset = 08h]

MISC_CONTROL is shown in 表 7-27.

Return to the Summary Table.

表 7-27. MISC_CONTROL Register Field Descriptions

Bit	Field	Type	Reset	Description
7	LANE_SWAP	R/W	0h	This field swaps the input and output lanes. 0h = No lanes swapped 1h = Both input and output lanes swapped
6	FANOUT_EN	R/W	0h	Selects whether or not fan-out buffer feature is enabled or not. When enabled, hardware will enable RCLKOUT when operating in HDMI1.4 and HDMI2.0. When operating in HDMI 2.1 mode, OUT_CLK will be enabled for FRL lane 3. 0h = Fan-out buffer feature disabled. 1h = Fan-out buffer feature enabled.
5	RX_TERM_DISABLE	R/W	0h	When set will disable Rx termination. 0h = Enabled when HPD_IN high. 1h = Disable
4	HPD_OUT_SEL	R/W	0h	Selects whether HPD_OUT is push/pull or open-drain. 0h = Push Pull 1h = Open Drain

表 7-27. MISC_CONTROL Register Field Descriptions (続き)

Bit	Field	Type	Reset	Description
3	EQ_SNOOP_CTRL	R/W	1h	Control whether Rx EQ is adjusted in response to snooped TXFFE when TXFFE snooping is enabled through registers 41h and 42h. 0h = Rx EQ automatically adjusted for TXFFE 1h = Rx EQ is fixed
2	RATE_SNOOP_CTRL	R/W	0h	Control snooping of HDMI rates. When snooping is disabled, correct HDMI rate must be written through I2C to registers 20h and 31h. 0h = Snooping enabled 1h = Snooping disabled
1-0	TXFFE_SNOOP_CTRL	R/W	0h	Control snooping of TXFFE 0h = DDC snooping through registers 35h, 41h and 42h 1h = DDC snooping disabled. TXFFE controlled through I2C writes to 35h, 41h and 42h 2h = DDC snooping disabled. TXFFE controlled through writes to CLK_TXFFE, D0_TXFFE, D1_TXFFE, and D2_TXFFE 3h = DDC snooping disabled. TXFFE controlled through writes to CLK_TXFFE, D0_TXFFE, D1_TXFFE, and D2_TXFFE

7.5.1.4 GBL_SLEW_CTRL Register (Offset = Bh) [Reset = 34h]

GBL_SLEW_CTRL is shown in 表 7-28.

Return to the Summary Table.

表 7-28. GBL_SLEW_CTRL Register Field Descriptions

Bit	Field	Type	Reset	Description
7	RESERVED	R	0h	Reserved
6-4	SLEW_3G	R/W	3h	Field controls slew rate for HDMI 1.4 data lane and HDMI 2.1 3Gbps FRL data lanes. 0h = slowest edge rate 7h = fastest edge rate
3	RESERVED	R	0h	Reserved
2-0	SLEW_6G	R/W	4h	Field controls slew rate for HDMI 2.0 data lanes and HDMI 2.1 6Gbps FRL data lanes. 0h = slowest edge rate 7h = fastest edge rate

7.5.1.5 GBL_SLEW_CTRL2 Register (Offset = Ch) [Reset = 71h]

GBL_SLEW_CTRL2 is shown in 表 7-29.

Return to the Summary Table.

表 7-29. GBL_SLEW_CTRL2 Register Field Descriptions

Bit	Field	Type	Reset	Description
7	RESERVED	R	0h	Reserved
6-4	SLEW_8G10G12G	R/W	7h	Field controls slew rate for data lanes for 8Gbps, 10Gbps and 12Gbps FRL datarates 0h = slowest edge rate 7h = fastest edge rate
3	RESERVED	R	0h	Reserved
2-0	SLEW_CLK	R/W	1h	Field control slew rate of clock lane in HDMI 1.4b and HDMI 2.0 modes. 0h = slowest edge rate 7h = fastest edge rate

7.5.1.6 GBL_CTRL1 Register (Offset = Dh) [Reset = 22h]

GBL_CTRL1 is shown in 表 7-30.

Return to the Summary Table.

表 7-30. GBL_CTRL1 Register Field Descriptions

Bit	Field	Type	Reset	Description
7	GLOBAL_LINR_EN	R/W	0h	Global control for selecting between linear redriver or limited redriver. 0h = Limited 1h = Linear
6	TX_AC_EN	R/W	0h	Controls selection of ac-coupled or dc-coupled TX termination. When AC-coupled is enabled, 50 Ω termination on both P and N to VCC will be enabled. 0h = dc-coupled 1h = ac-coupled
5-4	GLOBAL_DCG	R/W	2h	CTLE DCGain for all lane. 0h = -3dB 1h = -3dB 2h = 0dB 3h = +1dB
3	TXTERM_AUTO_HDMI14	R/W	0h	Selects between no termination and 300 Ωs when TERM = 2h and operating in HDMI1.4. 0h = No termination for clock less than or equal to 165MHz and 300 Ω for clock greater than 225MHz 1h = 300 Ω
2	CTLEBYP_EN	R/W	0h	Selects whether or not CTLE bypass is enabled or not when GLOBAL_DCG is set to 2h and EQ set to 0h. 0h = CTLE bypass disabled 1h = CTLE bypass enabled
1-0	TERM	R/W	2h	TX termination control 0h = No termination 1h = 300 Ω 2h = Automatic based HDMI mode 3h = 100 Ω

7.5.1.7 GBL_CTLE_CTRL Register (Offset = Eh) [Reset = 3Fh]

GBL_CTLE_CTRL is shown in 表 7-31.

Return to the Summary Table.

表 7-31. GBL_CTLE_CTRL Register Field Descriptions

Bit	Field	Type	Reset	Description
7-6	GLOBAL_CTLEBW	R/W	0h	CTLE bandwidth control. 0 is lowest and 3h is highest.
5-4	HDMI14_CTLE_SEL	R/W	3h	Selects the CTLE used when datarate is HDMI 1.4. Value programmed into this field will apply to data lanes only. Clock lane will always use 3Gbps CTLE. 0h = 3Gbps CTLE 1h = 6Gbps CTLE 2h = Auto select based on snoop datarate 3h = 12Gbps CTLE
3-2	HDMI20_CTLE_SEL	R/W	3h	Selects the CTLE used when datarate is HDMI 2.0. Value programmed into this field will apply to data lanes only. Clock lane will always use 3Gbps CTLE. 0h = 3Gbps CTLE 1h = 6Gbps CTLE 2h = Auto select based on snoop datarate 3h = 12Gbps CTLE

表 7-31. GBL_CTLE_CTRL Register Field Descriptions (続き)

Bit	Field	Type	Reset	Description
1-0	HDMI21_CTLE_SEL	R/W	3h	Selects the CTLE used when datarate is HDMI 2.1. Value programmed into this field will apply to all four lanes. 0h = 3Gbps CTLE 1h = 6Gbps CTLE 2h = Auto select based on snoop datarate 3h = 12Gbps CTLE

7.5.1.8 LANE_ENABLE Register (Offset = 11h) [Reset = 5Fh]

LANE_ENABLE is shown in 表 7-32.

Return to the Summary Table.

表 7-32. LANE_ENABLE Register Field Descriptions

Bit	Field	Type	Reset	Description
7-6	HDMI20_VOD	R/W	1h	VOD control for limited redriver in HDMI 2.0 0h = Use values in CLK_VOD, D0_VOD, D1_VOD and D2_VOD 1h = Default (1000mV) 2h = Default - 5% 3h = Default + 5%
5-4	HDMI14_VOD	R/W	1h	VOD control for limited redriver in HDMI 1.4 0h = Use values in CLK_VOD, D0_VOD, D1_VOD and D2_VOD 1h = Default (1000mV) 2h = Default - 5% 3h = Default - 10%
3	CLK_LANE_EN	R/W	1h	Enable for CLK lane 0h = Disabled 1h = Enabled
2	D0_LANE_EN	R/W	1h	Enable for D0 lane 0h = Disabled 1h = Enabled

8 Application and Implementation

注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくことになります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

TMDS1204 is designed to accept AC or DC-coupled HDMI input signals. The device provides signal conditioning and level shifting functions to drive a compliant HDMI source connector. The device can be used in an HDMI sink application such as monitor or TV. The TMDS1204 can also be used as an DP/HDMI redriver in an embedded application. In many major PC or gaming systems APU/GPU will provide AC-coupled HDMI signals. TMDS1204 is suitable for such platforms.

8.1 Application Information

The TMDS1204 features are optimized for sink applications such as TV or monitors, but TMDS1204 can also support source applications such as Blu-ray™ DVD player, gaming system, desktops, and notebooks. The following sections provide design considerations for the various types of applications.

8.2 Typical Source-Side Application

図 8-1 shows a schematic representation of what is considered a standard source implementation.
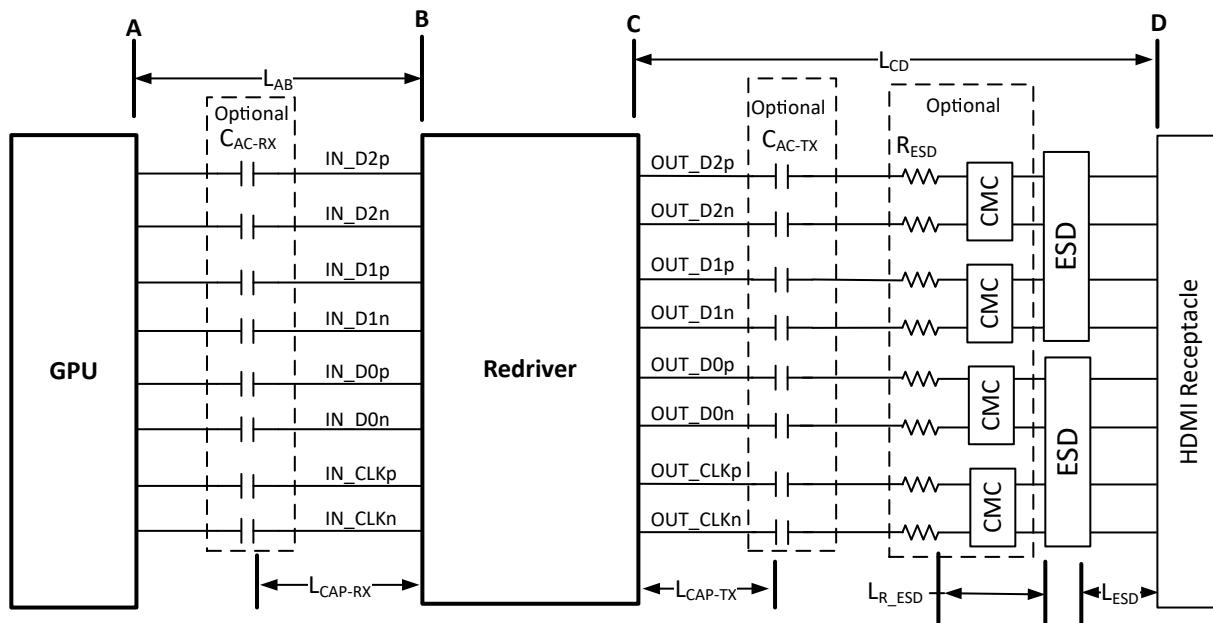

図 8-1. TMDS1204 in Source Side Application

8.2.1 Design Requirements

The TMDS1204 can be designed into many different applications. In all the applications there are certain requirements for the system to work properly. The EN pin must have a 0.1-µF capacitor to ground. The processor can drive the EN pin, but the EN pin needs to change states (low to high) after the voltage rails have stabilized. Using I^{2}C is the best way to configure the device, but pin strapping is also provided as I^{2}C and is not available in all cases. As sources may have many different naming conventions, it is necessary to confirm that the link between the source and the TMDS1204 are correctly mapped. A Swap function is provided for the input pins in case signaling is reversed between the source and receptacle. 表 8-1 lists information on expected values to perform properly.

For this design example, the TMDS1204 is assumed to be configured for pin-strap mode. If I2C mode is desired, the MODE pin should be set to "F" and software must configure TMDS1204. For how to configure TMDS1204, refer to セクション 7.4.1.

表 8-1. Design Parameters

Design Parameter	Value
V$_{CC}$	3.3V
V$_{IO}$ (1.2V, 1.8V, or 3.3V LVCMOS levels)	1.8V
Maximum HDMI 2.1 FRL Datarate (3, 6, 8, 10, or 12Gbps)	12Gbps
Pin-strap or I2C mode (if I2C, then MODE = "F").	Pin-strap
Pin Strap Mode.(MODE = "0", "R" or "1").	Mode = "0" (Fixed EQ)
DDC Snoop Feature. (Y/N). Required when in pin strap. Optional in I2C mode.	Yes
SWAP function (Y / N). In pin strap mode controlled by SDA/CFG1 pin.	Yes. SDA/CFG1 pin = H.
HPD_IN to HPD_OUT Level Shifter Support (Y / N)	Yes, HPD_OUT is used. If no, then HPD_OUT can be left floating.
Pre-Channel Length (表 8-2 provides the length restrictions)	Length = 8 inches (≅ 7.2dB at 6GHz insertion loss)
Post-Channel Length (表 8-2 provides the length restrictions)	Length = 2 inches (≅ 1.8dB at 6GHz insertion loss)
Limited or linear redriver mode?	Limited redriver (LINEAR_EN pin = "0").
TX is DC or AC-coupled to HDMI receptacle?	DC-coupled. AC_EN pin = Low.
GPU Launch Voltage (500mV to 1200mV) if using limited redriver mode. If using linear redriver mode, then refer to the GPU requirements listed in 表 7-4.	500mV
GPU HDMI 2.1 pre-shoot and de-emphasis levels used if using redriver in limited mode	If MODE = "0" or "R", GPU's TX FFE pre-shoot and de-emphasis levels shall be set to 0dB for all four TXFFE levels If MODE = "1", then GPU TXFFE pre-shoot and de-emphasis levels shall meet the requirements listed in 表 7-4.
RX EQ (16 possible values. Value chosen based on pre-channel length).	EQ1 pin: "R" ADDR/EQ0 pin: "R" (7.5dB)
TX Pre-emphasis. In pre-strap mode controlled by TXPRE pin.	Default 0dB of pre-emphasis. Float TXPRE pin.
TX Swing. In pre-strap mode controlled by TXSWG pin.	Default TX swing level. Float TXSWG pin.

English Data Sheet: SLLSF57

表 8-2. **Source Layout and Component Placement Constraints**

Symbol	Parameter	Condition	Min	Typ	Max	Units
R_{ESD}	External series resistor between ESD component and TMDS1204		0		2.5	Ω
L_{AB} [1] [2]	PCB trace length from GPU to TMDS1204	At 12Gbps	1		10	inches
$L_{INTRA\text{-}AB}$	Intra-pair skew from GPU to TMDS1204				5	mil
L_{CD} [1]	PCB trace length from TMDS1204 to receptacle	At 12Gbps	0.75		2	inches
$L_{INTRA\text{-}CD}$	Intra-pair skew from TMDS1204 to receptacle				5	mil
$L_{CAP\text{-}RX}$	PCB trace length from TMDS1204 to optional external $C_{AC\text{-}RX}$ capacitor		0.3			inches
$L_{CAP\text{-}TX}$	PCB trace length from TMDS1204 to optional external $C_{AC\text{-}TX}$ capacitor		0.3			inches
L_{ESD}	PCB trace length from ESD component to receptacle				0.5	inches
L_{R_ESD}	PCB trace length from R_{ESD} to ESD component				0.25	inches
$L_{INTER\text{-}PAIR}$ [3]	Inter-pair skew between all four channels (D0, D1, D2, and CLK)				1	inches
IL_{PCB}	PCB trace insertion loss		0.1		0.17	dB / inch /GHz
Z_{PCB_AB}	Differential impedance of L_{AB}		75		110	Ω
Z_{PCB_CD}	Differential impedance of L_{CD}		90		110	Ω
VIA_{AB}	Number of vias between GPU and TMDS1204				2	VIA
VIA_{CD}	Number of vias between HDMI connector and TMDS1204				1	VIA
XTALK	Differential crosstalk between adjacent differential pairs on PCB.	≦ 3GHz			−24	dB

(1)	Maximum distance assumes PCB trace insertion loss meets IL_{PCB} requirement. If PCB trace insertion loss exceeds the maximum limit, then distance needs be reduced.

(2)	Minimum distance assumes PCB trace insertion loss meets IL_{PCB} requirement. If PCB trace insertion loss is less than the minimum limit, then distance needs to be increased.

(3)	Calculation of channel length is the sum of L_{AB} and L_{CD}.

8.2.2 Detailed Design Procedure
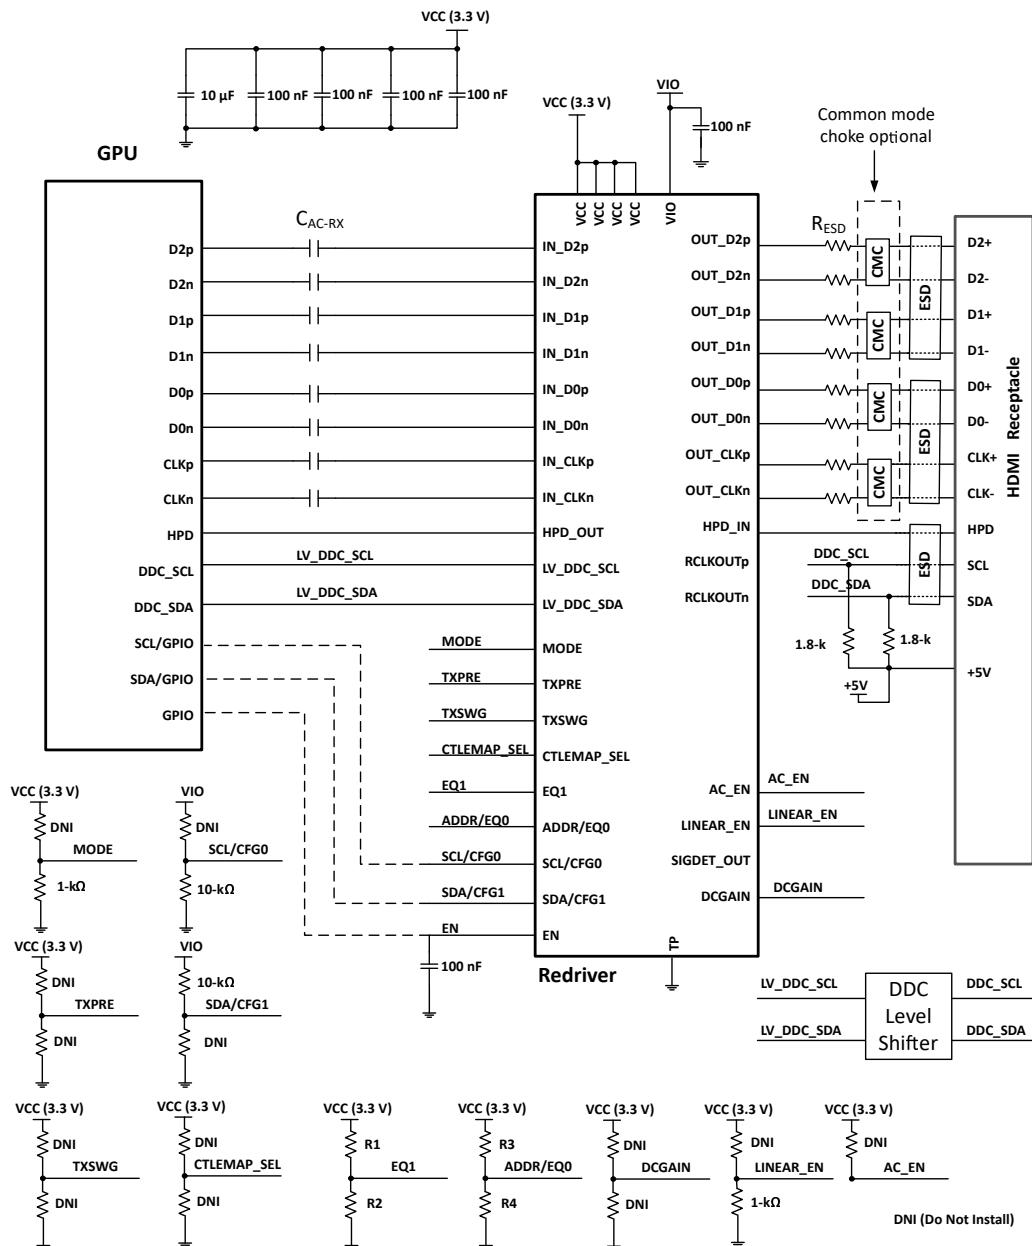

図 8-2. TMDS1204 in Source Application Schematics

8.2.2.1 Pre-Channel (L$_{AB}$)

The TMDS1204 can support up to 12dB at 6GHz of insertion loss. The loss profile between the GPU and the TMDS1204 input (referred to the pre-channel as shown in 図 8-1) should be less than the TMDS1204 maximum receiver equalization. 図 8-3 shows the loss profile of FR4 trace at different lengths. The TMDS1204 EQ0 and EQ1 pins should be configured to match the pre-channel insertion loss. 表 7-6 lists the EQ0 and EQ1 configuration options.

The GPU transmitter differential output voltage swing must be large enough so that the TMDS1204's V$_{ID(DC)}$ and V$_{ID(EYE)}$ requirements are met. The V$_{ID(EYE)}$ is the eye height after the contribution of ISI jitter only. Because a redriver can only compensate for ISI jitter, all non-ISI sources of jitter (random, sinusoidal, and so forth) will be passed through TMDS1204. If the system designer requires the worse case channel length of 10 inches, then the GPU transmitter differential voltage swing without de-emphasis should be at least 1000mVpp to meet the V$_{ID(DC)}$ and V$_{ID(EYE)}$ requirements of the TMDS1204. A GPU transmitter, which incorporates de-emphasis, can meet the requirement with less than 1000mVpp.

8.2.2.2 Post-Channel (L$_{CD}$)

図 8-1 shows the post-channel, which should be 2 inches or less. If ESD devices are used, then it may be necessary to overcome the insertion loss of the ESD device by increasing the TMDS1204 transmitter voltage swing. 表 7-17 lists how this is done by configuring the TXSWG pin to the appropriate value.

If post-channel is greater than 2 inches, then transmitter pre-emphasis may need to be employed. 表 7-15 lists how this is done by configuring the TMDS1204 TXPRE pin to the appropriate setting. Adjusting the TMDS1204 transmitter voltage swing may also be necessary.

8.2.2.3 Common Mode Choke

It may be necessary to incorporate a common mode choke (CMC) to reduce EMI. The purpose of a CMC is to have a minimal impact to the differential signal while attenuating common mode noise thereby reducing radiated emissions. The CMC should be placed between the TMDS1204 and the ESD device.

表 8-3. Recommended Common Mode Chokes

Manufacturer	Part Number
Murata	DLM0QSB120HY2
Murata	DLM0NSB120HY2
Murata	NFG0QHB542HS2

8.2.2.4 ESD Protection

It may be necessary to incorporate an ESD component to protect the TMDS1204 from electrostatic discharge (ESD). It is recommended that the ESD protection component has a breakdown voltage of ≥4.5V and a clamp voltage of ≤4.3V. A clamp voltage greater than 4.3V will require a R$_{ESD}$ on each high-speed differential pin. The ESD component should be placed near the HDMI connector.

表 8-4. Recommended ESD Protection Component

Manufacturer	Part Number
NXP	PUSB3FR4

8.2.3 Application Curves

8.3 Typical Sink-Side Application

図 8-9 shows a schematic representation of what is considered a standard sink implementation.
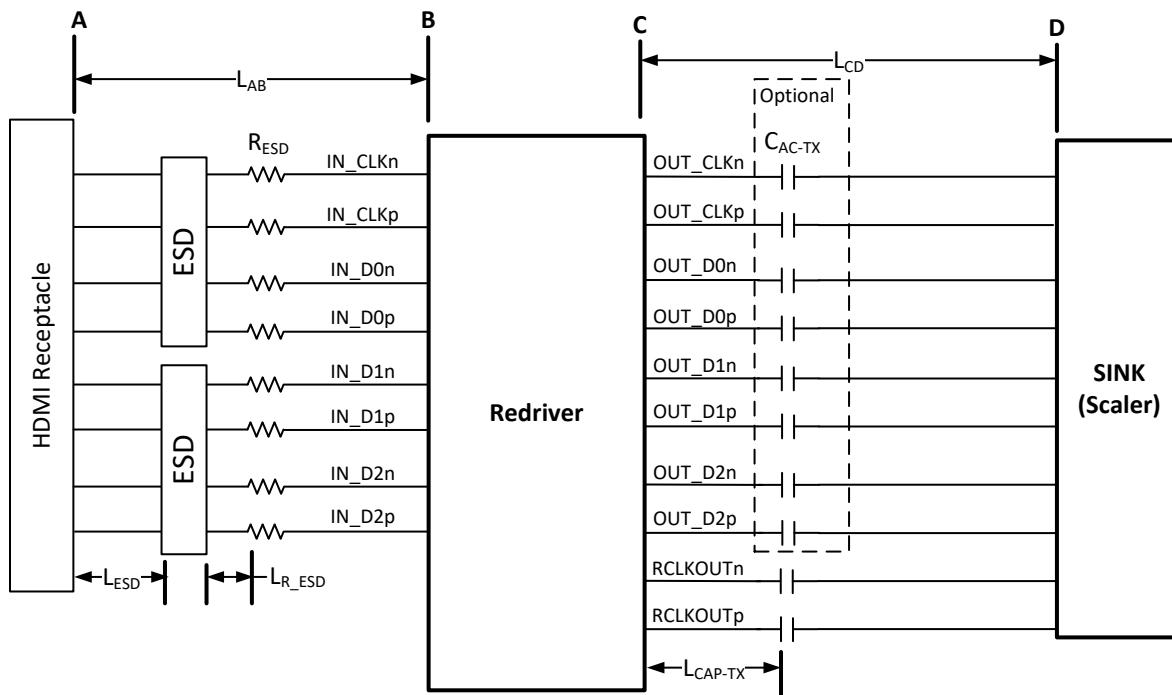

図 8-9. TMDS1204 in Sink Side Application

8.3.1 Design Requirements

表 8-5. Design Parameters

Design Parameter	Value
V_{CC}	3.3V (±5%)
V_{IO} (1.2V, 1.8V, or 3.3V LVCMOS levels)	3.3V
Maximum HDMI 2.1 FRL Datarate (6, 8, 10, or 12Gbps)	12Gbps
Pin-strap or I2C mode (if I2C, then MODE = "F").	Pin-strap
Pin Strap Mode.(MODE = "0", "R" or "1").	Mode = "1" (Adaptive EQ)
DDC Snoop Feature. (Y/N). Required when in pin strap. Optional in I2C mode.	Yes
SWAP function (Y / N). In pin strap mode controlled by SDA/CFG1 pin.	No. SDA/CFG1 pin = L.
HPD_IN to HPD_OUT Level Shifter Support (Y / N)	No, then HPD_OUT can be left floating.
Pre-Channel Length (表 8-6 lists the length restrictions)	Length = 1 inches; Width = 4 mil. (≅ 1dB at 6GHz insertion loss)
Post-Channel Length (表 8-6 lists the length restrictions)	Length = 6 inches; Width = 4 mil (≅ 6dB at 6GHz insertion loss)
Limited or linear redriver mode?	Linear redriver (LINEAR_EN pin = "F") recommended in sink application
TX is DC or AC-coupled to HDMI receptacle?	AC-coupled. AC_EN pin = High.
RX EQ (16 possible values. Value chosen based on pre-channel length).	EQ1 pin: "0" ADDR/EQ0 pin: "1" (2.7dB)
CTLE Map (Map A, Map B or Map C). In pre-strap controlled by CTLEMAP_SEL pin.	For Sink application recommend Map B or C.
TX pre-emphasis. In pre-strap mode controlled by TXPRE pin. TX pre-emphasis control not supported in linear redriver mode.	Float TXPRE pin.
TX Swing. In pre-strap mode controlled by TXSWG pin.	Default TX swing level. Float TXSWG pin.

表 8-5. Design Parameters (続き)

Design Parameter	Value
Fan-out Buffer support (Y / N)	Typically only used with a FPGA. If feature needed in pin-strap mode, then MODE must be set to "R".

表 8-6. Sink Layout and Component Placement Constraints

Symbol	Parameter	Condition	Min	Typ	Max	Units
R_{ESD}	External series resistor between ESD component and TMDS1204		0		2.5	Ω
L_{AB} [1] [2]	PCB trace length from receptacle to TMDS1204		0.75		2	inches
$L_{INTRA-AB}$	Intra-pair skew from receptacle to TMDS1204				2	mil
L_{CD} [1]	PCB trace length from TMDS1204 to sink		1		6	inches
$L_{INTRA-CD}$	Intra-pair skew from TMDS1204 to sink				2	mil
L_{CAP-TX}	PCB trace length from TMDS1204 to external C_{AC-TX} capacitor		0.3			inches
L_{ESD}	PCB trace length from ESD component to receptacle				0.5	inches
L_{R_ESD}	PCB trace length from R_{ESD} to ESD component				0.25	inches
$L_{INTER-PAIR}$ [3]	Inter-pair skew between all four channels (D0, D1, D2, and CLK)				0.10	inches
IL_{PCB}	PCB trace insertion loss		0.1		0.17	dB / inch /GHz
Z_{PCB_AB}	Differential impedance of L_{AB}		90		110	Ω
Z_{PCB_CD}	Differential impedance of L_{CD}		90		110	Ω
VIA_{AB}	Number of vias between receptacle and TMDS1204				1	VIA
VIA_{CD}	Number of vias between sink and TMDS1204				2	VIA
XTALK	Differential crosstalk between adjacent differential pairs on PCB.	≦ 3GHz			−24	dB

(1) Maximum distance assumes PCB trace insertion loss meets IL_{PCB} requirement. If PCB trace insertion loss exceeds the maximum limit, then distance needs to be reduced.
(2) Minimum distance assumes PCB trace insertion loss meets IL_{PCB} requirement. If PCB trace insertion loss is less than the minimum limit, then distance needs to be increased.
(3) Calculation of channel length is the sum of L_{AB} and L_{CD}.

8.3.2 Detailed Design Procedures
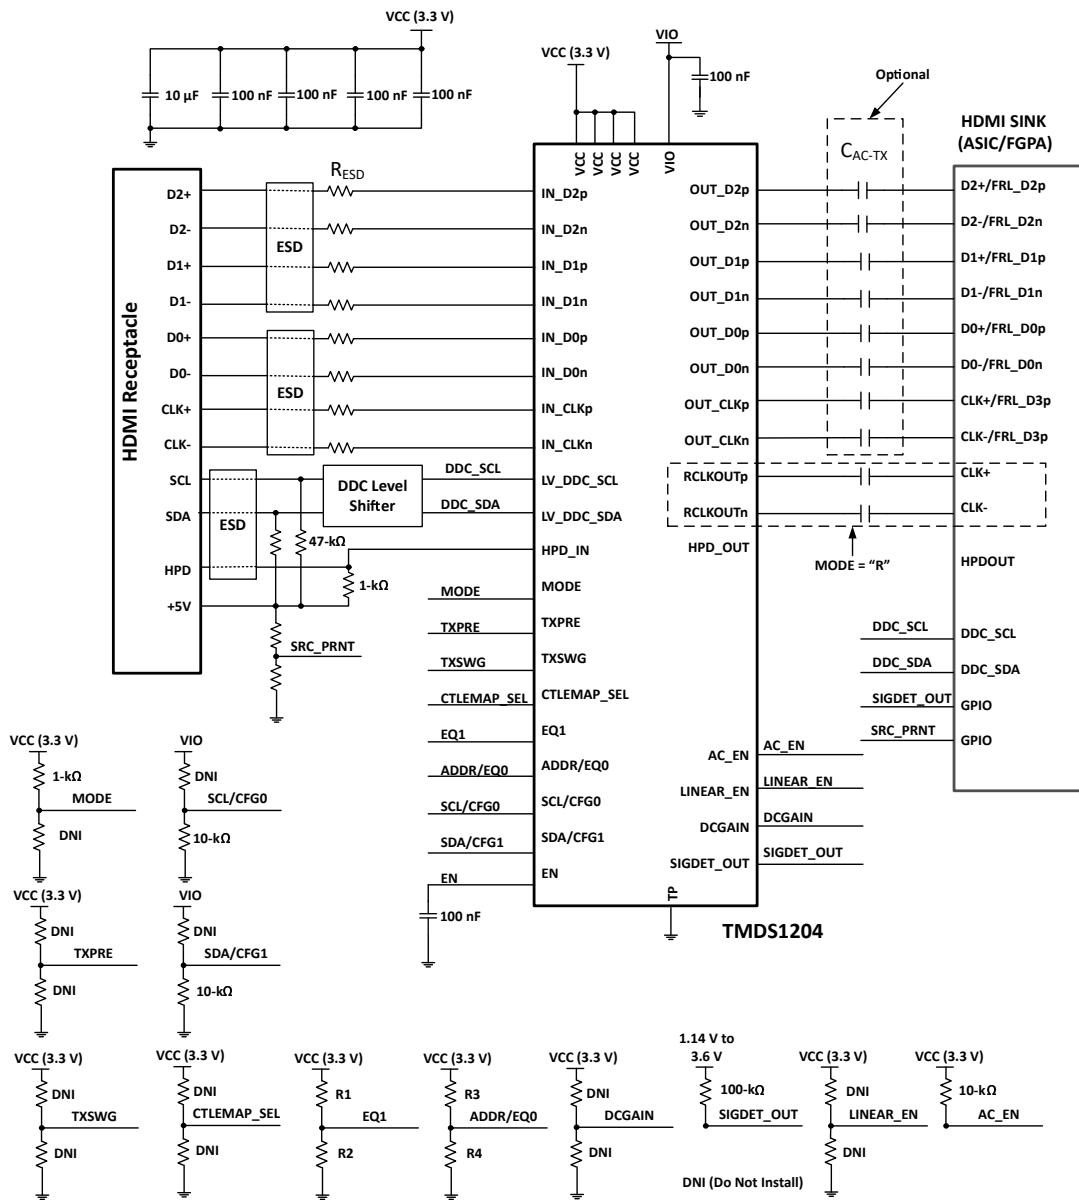

図 8-10. TMDS1204 in Sink Application Schematics

8.4 Power Supply Recommendations

8.4.1 Supply Decoupling

Texas Instruments recommends a single bulk capacitor of 10-μF on the V_{CC} supply. Along with the bulk capacitor, Texas Instruments recommends a 0.1-μF decoupling capacitor on each TMDS1204 V_{CC} pin that is placed as close to the V_{CC} pin as possible. 図 8-10 shows an example.

8.5 Layout

8.5.1 Layout Guidelines

For the TMDS1204 on a high-K board, it is required to solder the PowerPAD™ onto the thermal land to ground. A thermal land is the area of solder-tinned-copper underneath the PowerPAD package. On a high-K board, the TMDS1204 can operate over the full temperature range by soldering the PowerPAD onto the thermal land. For the device to operate across the temperature range on a low-K board, a 1-oz Cu trace connecting the GND pins to the thermal land must be used. A simulation shows $R_{\theta JA}$ = 30.9°C/W allowing 950-mW power dissipation at 70°C ambient temperature. For information about a general PCB design guide for PowerPAD packages, refer to the *PowerPAD Thermally Enhanced Package* application report. TI recommends using a four layer stack up at a minimum to accomplish a low-EMI PCB design. TI recommends four layers as the TMDS1204 is a single voltage rail device.

- Routing the high-speed TMDS traces on the top layer avoids the use of vias (and the introduction of their inductance) and allows for clean interconnects from the HDMI connectors to the Redriver inputs and outputs. It is important to match the electrical length of these high speed traces to minimize both inter-pair and intra-pair skew.
- Placing a solid ground plane next to the high-speed single layer establishes controlled impedance for transmission link interconnects and provides an excellent low-inductance path for the return current flow.
- Placing a power plane next to the ground plane creates an additional high-frequency bypass capacitance.
- Routing slower seed control signals on the bottom layer allows for greater flexibility as these signal links usually have margin to tolerate discontinuities such as vias.
- If an additional supply voltage plane or signal layer is needed, add a second power or ground plane system to the stack to keep symmetry. This makes the stack mechanically stable and prevents it from warping. Also the power and ground plane of each power system can be placed closer together, thus increasing the high frequency bypass capacitance significantly.
- To minimize crosstalk between adjacent differential pairs, the distance between the differential pairs should be at least five times longer than the trace width (5W rule). For the clock differential pair, the distance should be increased to 8W or 10W.

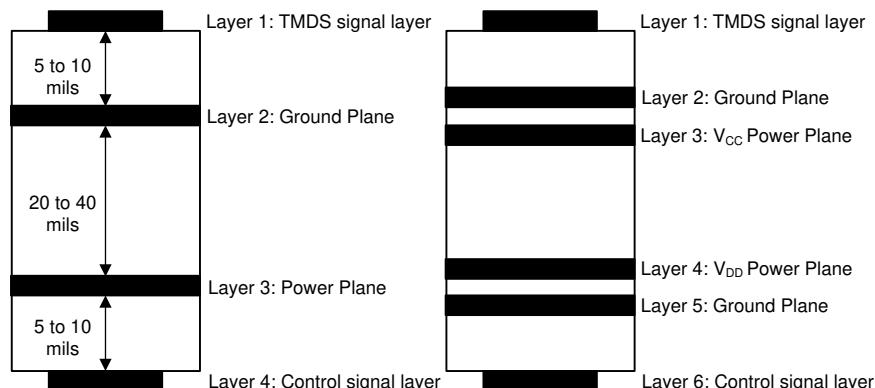

図 8-11. Recommended 4 or 6-Layer PCB Stack

8.5.2 Layout Example
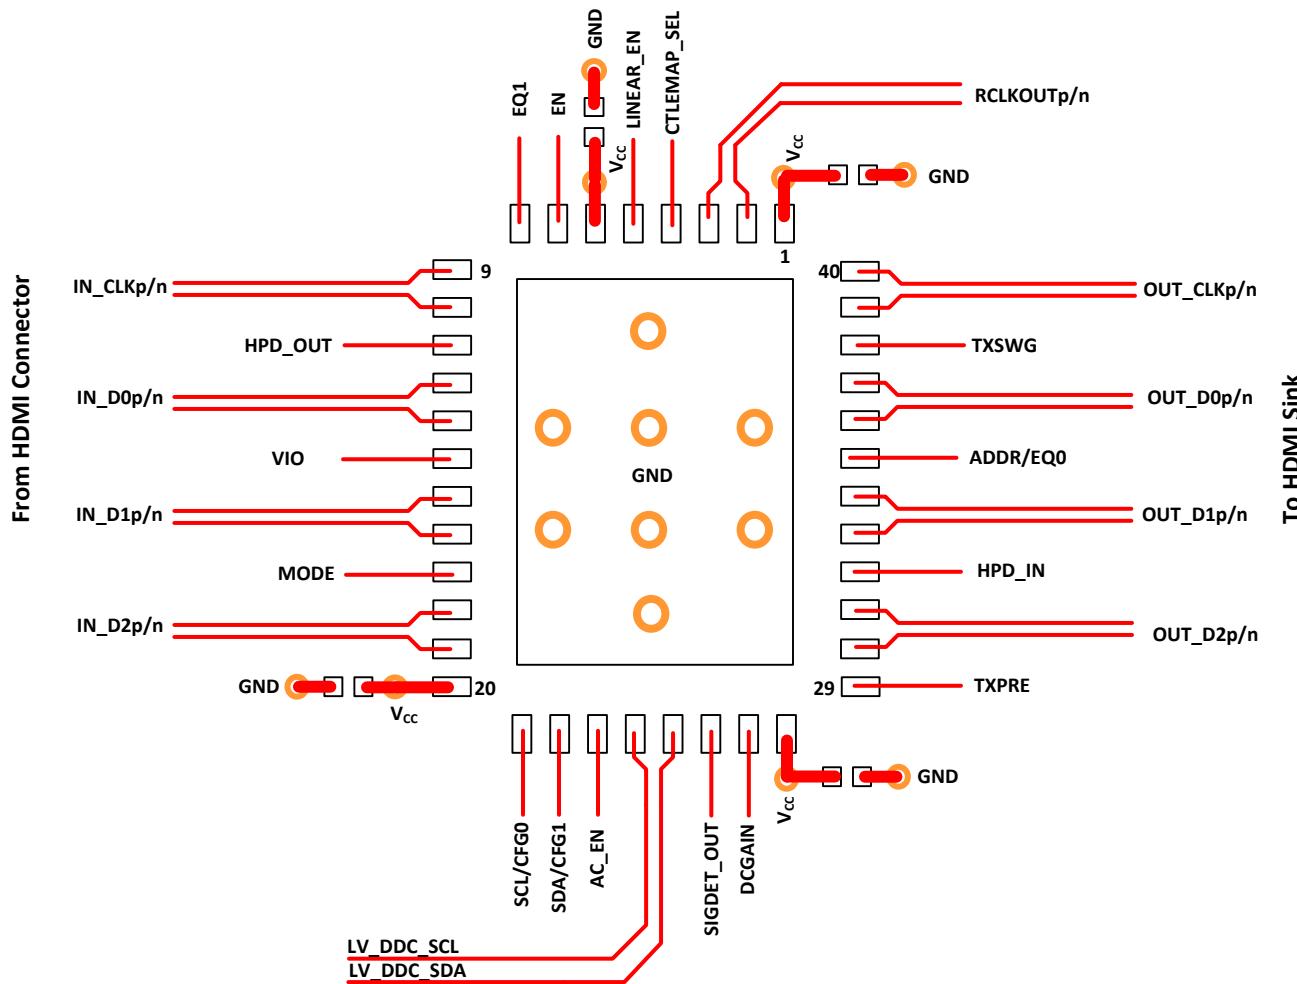

The differential input lanes and differential output lanes should be separated as close to the TMDS1204 as feasible to minimize crosstalk. Adding a ground flood plain between each differential lane further reduces crosstalk and thus improves signal integrity at high speed data rates.

9.5 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

TMDS1204RNQT.B	Active	Production	WQFN (RNQ) | 40	250 | SMALL T&R	Yes	NIPDAU	Level-1-260C-UNLIM	0 to 70	TMD04

(1) Status: For more details on status, see our product life cycle.

(2) Material type: When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) RoHS values: Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) Lead finish/Ball material: Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) MSL rating/Peak reflow: The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) Part marking: There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
