TEXAS INSTRUMENTS
TPS709
JAJSBS4H – MARCH 2012 – REVISED JULY 2021

TPS709 150mA、30V、1μA I_Q、イネーブル付き電圧レギュレータ

1 特長

- きわめて低い I_Q：1μA
- 逆電流保護
- 低 $I_{SHUTDOWN}$：150nA
- 入力電圧範囲：2.7V～30V
- 200mA のピーク出力をサポート
- 温度範囲全体で 2% の精度
- 固定出力電圧で提供：
  1.2V～6.5V
- サーマル・シャットダウン機能と過電流保護機能
- パッケージ：SOT-23-5、WSON-6

2 アプリケーション

- 煙感知器と熱感知器
- サーモスタット
- モーション検出器 (PIR、uWave など)
- コードレス電動工具
- 家電機器用バッテリ・パック
- 電気メーター
- 水道メーター

3 概要

TPS709 シリーズのリニア・レギュレータは、消費電力が重要なアプリケーション用に設計された、静止電流が非常に低いデバイスです。高精度のバンドギャップおよびエラー・アンプにより、温度範囲全体にわたって 2% の精度が得られます。静止電流がわずか 1μA であるため、アイドル時の消費電力を最小限に抑える必要のある常時オンのバッテリ駆動システムに最適なソリューションです。これらのデバイスは、サーマル・シャットダウン、電流制限、逆電流保護機能により安全性が強化されています。

シャットダウン・モードは、EN ピンを Low にすることでイネーブルになります。このモードでのシャットダウン電流は、150nA (標準値) に低下します。

TPS709 シリーズは、WSON-6 および
SOT-23-5 パッケージで供給されます。

製品情報(1)

部品番号	パッケージ	本体サイズ (公称)
TPS709	SOT-23 (5)	2.90mm × 1.60mm
	WSON (6)	2.00mm × 2.00mm

(1) 利用可能なすべてのパッケージについては、このデータシートの末尾にあるパッケージ・オプションについての付録を参照してください。

4 Revision History

資料番号末尾の英字は改訂を表しています。その改訂履歴は英語版に準じています。

Changes from Revision G (November 2015) to Revision H (July 2021) **Page**

- 文書全体にわたって表、図、相互参照の採番方法を更新.....1
- 「*アプリケーション*」セクションを変更.....1
- Changed $V_{EN(HI)}$ row (changed parameter description and added test condition) in *Electrical Characteristics* table.....5
- Added $V_{EN(LOW)}$ row to *Electrical Characteristics* table.....5
- Added M3 suffix information to *Device Nomenclature* table.....17

Changes from Revision F (December 2014) to Revision G (November 2015) **Page**

- Added DBV package for TPS709A to *Pin Configurations and Functions* section.....3
- Added DBV package for TPS709B to *Pin Configurations and Functions* section.....3
- Added TPS709A and TPS709B to Pin Functions table.....3
- Moved operating junction temperature from *Electrical Characteristics* to *Recommended Operating Conditions*.....4

表 5-1. Pin Functions

PIN					I/O	DESCRIPTION
NAME	DRV	DBV				
	TPS709	TPS709	TPS709A	TPS709B		
EN	4	3	5	5	I	Enable pin. Drive this pin high to enable the device. Drive this pin low to put the device into low current shutdown. This pin can be left floating to enable the device. The maximum voltage must remain below 6.5 V.
GND	3	2	2	1	—	Ground
IN	6	1	3	2	I	Unregulated input to the device
NC	2, 5	4	4	4	—	No internal connection
OUT	1	5	1	3	O	Regulated output voltage. Connect a small 2.2-µF or greater ceramic capacitor from this pin to ground to assure stability.
Thermal pad		—	—	—	—	The thermal pad is electrically connected to the GND node. Connect this pad to the GND plane for improved thermal performance.

6 Specifications

6.1 Absolute Maximum Ratings

specified at T_J = –40°C to 125°C (unless otherwise noted); all voltages are with respect to GND[1]

		MIN	MAX	UNIT
Voltage	V_{IN}	–0.3	32	V
	V_{EN}	–0.3	7	
	V_{OUT}	–0.3	7	
Maximum output current	I_{OUT}	Internally limited		
Output short-circuit duration		Indefinite		
Continuous total power dissipation	P_{DISS}	See *Thermal Information*		
Operating junction temperature, T_J		–55	150	°C
Storage temperature, T_{stg}		–55	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001[1]	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101[2]	±500	

(1) JEDEC document JEP155 states that 2-kV HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 500-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating junction temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V_{IN}	Input voltage	2.7		30	V
V_{OUT}	Output voltage	1.2		6.5	V
V_{EN}	Enable voltage	0		6.5	V
T_J	Operating junction temperature	–40		125	°C

6.4 Thermal Information

THERMAL METRIC[1]		TPS709		UNIT
		DBV	DRV	
		5 PINS	6 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	212.1	73.1	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	78.5	97.0	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	39.5	42.6	°C/W
ψ_{JT}	Junction-to-top characterization parameter	2.86	2.9	°C/W
ψ_{JB}	Junction-to-board characterization parameter	38.7	42.9	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	N/A	12.8	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.

6.5 Electrical Characteristics

at ambient temperature (T_A) = –40°C to +85°C, V_{IN} = $V_{OUT(typ)}$ + 1 V or 2.7 V (whichever is greater), I_{OUT} = 1 mA, V_{EN} = 2 V, and C_{IN} = C_{OUT} = 2.2-µF ceramic (unless otherwise noted); typical values are at T_A = 25°C

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V_{IN}	Input voltage range		2.7		30	V
V_{OUT}	Output voltage range		1.2		6.5	V
V_{OUT}	DC output accuracy	V_{OUT} < 3.3 V	–2%		2%	
		V_{OUT} ≥ 3.3 V	–1%		1%	
ΔV_{OUT}	Line regulation	($V_{OUT(nom)}$ + 1 V, 2.7 V) ≤ V_{IN} ≤ 30 V		3	10	mV
	Load regulation	V_{IN} = $V_{OUT(typ)}$ + 1.5 V or 3 V (whichever is greater), 100 µA ≤ I_{OUT} ≤ 150 mA		20	50	
V_{DO}	Dropout voltage(1) (3)	TPS70933, I_{OUT} = 50 mA		295	650	mV
		TPS70933, I_{OUT} = 150 mA		960	1400	
		TPS70950, I_{OUT} = 50 mA		245	500	
		TPS70950, I_{OUT} = 150 mA		690	1200	
		TPS70965, I_{OUT} = 50 mA		180	500	
		TPS70965, I_{OUT} = 150 mA		460	1000	
$I_{(CL)}$	Output current limit(4)	V_{OUT} = 0.9 × $V_{OUT(nom)}$	200	320	500	mA
I_{GND}	Ground pin current	I_{OUT} = 0 mA, V_{OUT} ≤ 3.3 V		1.3	2.05	µA
		I_{OUT} = 0 mA, V_{OUT} > 3.3 V		1.4	2.25	
		I_{OUT} = 150 mA		350		
$I_{SHUTDOWN}$	Shutdown current	V_{EN} ≤ 0.4 V, V_{IN} = 2.7 V		150		nA
PSRR	Power-supply rejection ratio	f = 10 Hz		80		dB
		f = 100 Hz		62		
		f = 1 kHz		52		
V_n	Output noise voltage	BW = 10 Hz to 100 kHz, I_{OUT} = 10 mA, V_{IN} = 2.7 V, V_{OUT} = 1.2 V		190		μV_{RMS}
t_{STR}	Start-up time(2)	$V_{OUT(nom)}$ ≤ 3.3 V		200	600	µs
		$V_{OUT(nom)}$ > 3.3 V		500	1500	
$V_{EN(HI)}$	Enable pin high-level input voltage	Device enabled	0.9			V
$V_{EN(LOW)}$	Enable pin low-level input voltage	Device disabled	0		0.4	V
I_{EN}	EN pin current	EN = 1.0 V, V_{IN} = 5.5 V		300		nA
$I_{(REV)}$	Reverse current (flowing out of IN pin)	V_{OUT} = 3 V, V_{IN} = V_{EN} = 0 V		10		nA
	Reverse current (flowing into OUT pin)	V_{OUT} = 3 V, V_{IN} = V_{EN} = 0 V		100		
t_{SD}	Thermal shutdown temperature	Shutdown, temperature increasing		158		°C
		Reset, temperature decreasing		140		

(1) V_{DO} is measured with V_{IN} = 0.98 × $V_{OUT(nom)}$.
(2) Start-up time = time from EN assertion to 0.95 × $V_{OUT(nom)}$ and load = 47 Ω.
(3) Dropout is only valid when V_{OUT} ≥ 2.8 V because of the minimum input voltage limits.
(4) Measured with V_{IN} = V_{OUT} + 3 V for V_{OUT} ≤ 2.5 V. Measured with V_{IN} = V_{OUT} + 2.5 V for V_{OUT} > 2.5 V.

6.6 Typical Characteristics

over operating temperature range (T_J = –40°C to 125°C), I_{OUT} = 10 mA, V_{EN} = 2 V, C_{OUT} = 2.2 µF, and V_{IN} = $V_{OUT(typ)}$ + 1 V or 2.7 V (whichever is greater), unless otherwise noted; typical values are at T_J = 25°C

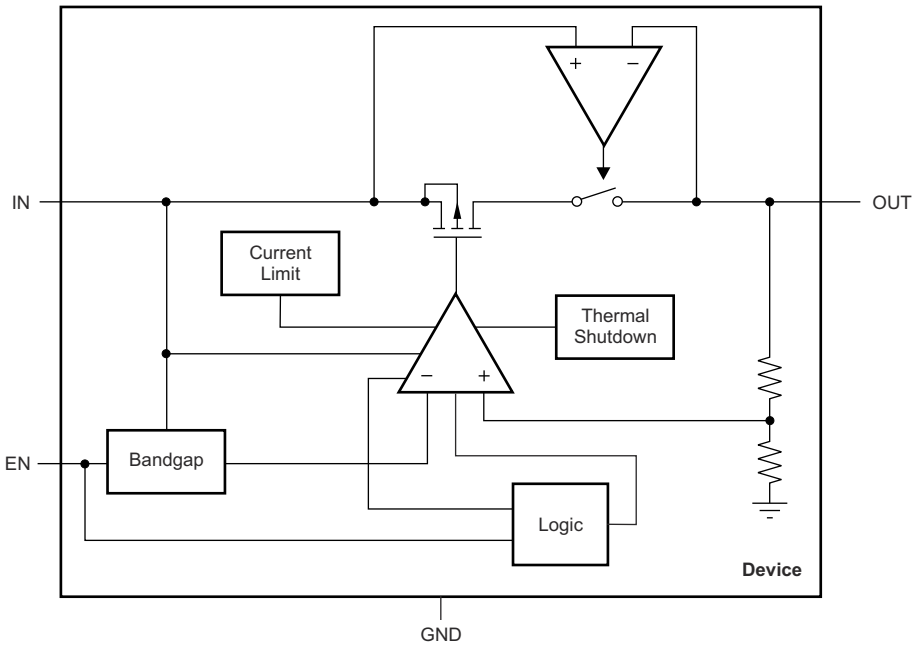
7 Detailed Description

7.1 Overview

The TPS709 series of devices are ultra-low quiescent current, low-dropout (LDO) linear regulators. The TPS709 offers reverse current protection to block any discharge current from the output into the input. The TPS709 also features current limit and thermal shutdown for reliable operation.

7.2 Functional Block Diagram



7.3 Feature Description

7.3.1 Internal Current Limit

The TPS709 internal current limit helps protect the regulator during fault conditions. During current limit, the output sources a fixed amount of current that is largely independent of output voltage. In such a case, the output voltage is not regulated, and can be measured as ($V_{OUT} = I_{LIMIT} \times R_{LOAD}$). The PMOS pass transistor dissipates [($V_{IN} - V_{OUT}$) × I_{LIMIT}] until a thermal shutdown is triggered and the device turns off. When cool, the device is turned on by the internal thermal shutdown circuit. If the fault condition continues, the device cycles between current limit and thermal shutdown; see the *Thermal Protection* section for more details.

The TPS709 is characterized over the recommended operating output current range up to 150 mA. The internal current limit begins to limit the output current at a minimum of 200 mA of output current. The TPS709 continues to operate for output currents between 150 mA and 200 mA but some data sheet parameters may not be met.

7.3.2 Dropout Voltage

The TPS709 use a PMOS pass transistor to achieve low dropout voltage. When ($V_{IN} - V_{OUT}$) is less than the dropout voltage (V_{DO}), the PMOS pass device is in the linear region of operation and the input-to-output resistance is the $R_{DS(ON)}$ of the PMOS pass element. V_{DO} approximately scales with the output current because the PMOS device functions like a resistor in dropout.

The ground pin current of many linear voltage regulators increases substantially when the device is operated in dropout. This increase in ground pin current while operating in dropout can be several orders of magnitude larger than when the device is not in dropout. The TPS709 employs a special control loop that limits the increase in ground pin current while operating in dropout. This functionality allows for the most efficient operation while in dropout conditions that can greatly increase battery run times.

7.3.3 Undervoltage Lockout (UVLO)

The TPS709 uses an undervoltage lockout (UVLO) circuit to keep the output shut off until the internal circuitry operates properly.

7.3.4 Reverse-Current Protection

The TPS709 has integrated reverse-current protection. Reverse-current protection prevents the flow of current from the OUT pin to the IN pin when output voltage is higher than input voltage. The reverse-current protection circuitry places the power path in high impedance when the output voltage is higher than the input voltage. This setting reduces leakage current from the output to the input to 10 nA, typical. The reverse current protection is always active regardless of the enable pin logic state or if the OUT pin voltage is greater than 1.8 V. Reverse current can flow if the output voltage is less than 1.8 V and if input voltage is less than the output voltage.

If voltage is applied to the input pin, then the maximum voltage that can be applied to the OUT pin is the lower of three times the nominal output voltage or 6.5 V. For example, if the 1.2-V output voltage version is used, then the maximum reverse bias voltage that can be applied to the OUT pin is 3.6 V. If the 5.0-V output voltage version is used, then the maximum reverse bias voltage that can be applied to the OUT pin is 6.5 V.

7.4 Device Functional Modes

The TPS709 has the following functional modes:

1. **Enabled:** When the enable pin (EN) goes above 0.9 V, the device is enabled. EN is pulled high by a 300-nA current source; therefore, EN can be left floating to enable the device. Do not connect EN to VIN. The EN pin is clamped by a 6.5-V Zener diode. Do not exceed the 7-V absolute maximum rating on the enable pin or excessive current flowing into the Zener clamp will destroy the device.
2. **Disabled:** When EN goes below 0.4 V, the device is disabled. During this time, OUT is high impedance and the current into IN ($I_{(SHUTDOWN)}$) is typically 150 nA.

8 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

8.1 Application Information

The TPS709 is a series of devices that consume low quiescent current and deliver excellent line and load transient performance. This performance, combined with low noise and very good PSRR with little (V_{IN} – V_{OUT}) headroom, makes this device ideal for RF portable applications, current limit, and thermal protection. The TPS709 is specified from –40°C to +125°C.

8.1.1 Input and Output Capacitor

The TPS709 devices are stable with output capacitors with an effective capacitance of 2.0 µF or greater for output voltages below 1.5 V. For output voltages equal or greater than 1.5 V, the minimum effective capacitance for stability is 1.5 µF. The maximum capacitance for stability is 47 µF. The equivalent series resistance (ESR) of the output capacitor must be between 0 Ω and 0.2 Ω for stability.

The effective capacitance is the minimum capacitance value of a capacitor after taking into account variations resulting from tolerances, temperature, and dc bias effects. X5R- and X7R-type ceramic capacitors are recommended because these capacitors have minimal variation in value and ESR over temperature.

Although an input capacitor is not required for stability, good analog design practice is to connect a 0.1-µF to 2.2-µF capacitor from IN to GND. This capacitor counteracts reactive input sources and improves transient response, input ripple, and PSRR. An input capacitor is necessary if line transients greater than 10 V in magnitude are anticipated.

8.1.2 Transient Response

As with any regulator, increasing the output capacitor size reduces over- and undershoot magnitude, but increases transient response duration.

8.2 Typical Application

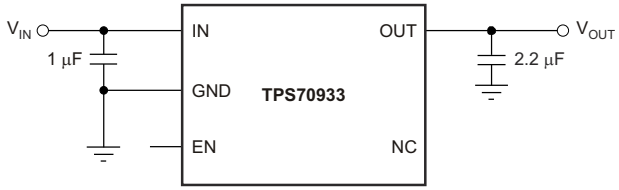


図 8-1. Wide Input, 3.3-V, Low-I_Q Rail

8.2.1 Design Requirements

表 8-1 summarizes the design requirements for 図 8-1.

表 8-1. Design Requirements for a Wide Input, 3.3-V, Low-I_Q Rail Application

PARAMETER	DESIGN SPECIFICATION
V_{IN}	5 V to 20 V
V_{OUT}	3.3 V
$I_{(IN)}$ (no load)	< 5 µA
I_{OUT} (max)	150 mA

8.2.2 Detailed Design Procedure

Select a 2.2-µF, 10-V X7R output capacitor to satisfy the minimum output capacitance requirement with a 3.3-V dc bias.

Select a 1.0-µF, 25-V X7R input capacitor to provide input noise filtering and eliminate high-frequency voltage transients.

8.2.3 Application Curves

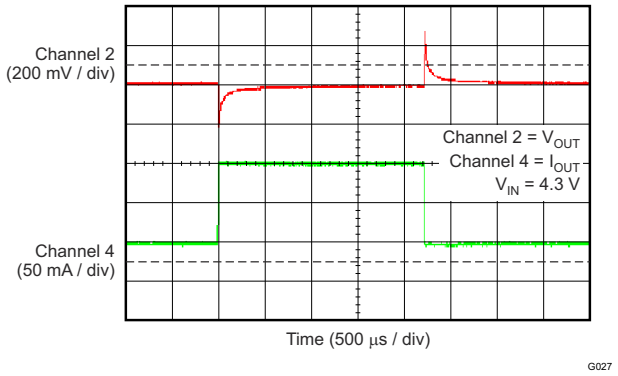

図 8-2. TPS70933 Load Transient (50 mA to 150 mA)

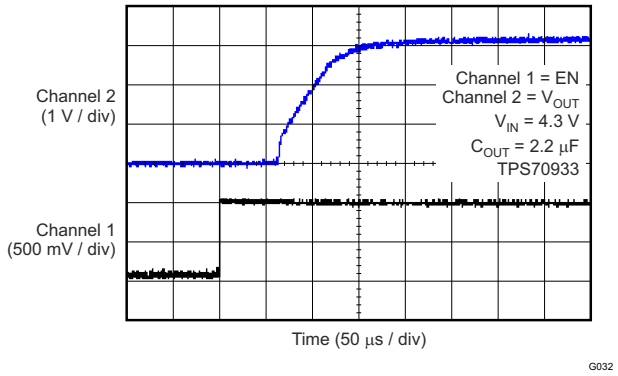

図 8-3. Power-Up With Enable

9 Power Supply Recommendations

This device is designed to operate with an input supply range of 2.7 V to 30 V. If the input supply is noisy, additional input capacitors with low ESR can help improve output noise performance.

9.1 Power Dissipation

The ability to remove heat from the die is different for each package type, presenting different considerations in the printed circuit board (PCB) layout. The PCB area around the device that is free of other components moves the heat from the device to ambient air. Performance data for JEDEC low and high-K boards are given in the *Thermal Information* table. Using heavier copper increases the effectiveness in removing heat from the device. The addition of plated through-holes to heat-dissipating layers also improves the heat sink effectiveness.

Power dissipation depends on input voltage and load conditions. Power dissipation (P_{DISS}) is equal to the product of the output current and the voltage drop across the output pass element, as shown in 式 1:

$$P_{DISS} = (V_{IN} - V_{OUT}) \times I_{OUT} \quad (1)$$

10 Layout

10.1 Layout Guidelines

Place input and output capacitors as close to the device pins as possible. To improve ac performance (such as PSRR, output noise, and transient response), TI recommends that the board be designed with separate ground planes for V_{IN} and V_{OUT}, with the ground plane connected only at the GND pin of the device. In addition, the ground connection for the output capacitor must be connected directly to the device GND pin.

10.1.1 Thermal Protection

Thermal protection disables the output when the junction temperature rises to approximately 165°C, allowing the device to cool. When the junction temperature cools to approximately 145°C, the output circuitry is again enabled. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit can cycle on and off. This cycling limits the dissipation of the regulator, protecting it from damage as a result of overheating.

Any tendency to activate the thermal protection circuit indicates excessive power dissipation or an inadequate heat sink. For reliable operation, limit junction temperature to 125°C, maximum. To estimate the margin of safety in a complete design (including heat sink), increase the ambient temperature until the thermal protection is triggered; use worst-case loads and signal conditions. For good reliability, thermal protection must trigger at least 35°C above the maximum expected ambient condition of the particular application. This configuration produces a worst-case junction temperature of 125°C at the highest expected ambient temperature and worst-case load.

The TPS709 internal protection circuitry is designed to protect against overload conditions. This circuitry is not intended to replace proper heat sinking. Continuously running the TPS709 into thermal shutdown degrades device reliability.

11 Device and Documentation Support

11.1 Device Support

11.1.1 Development Support

11.1.1.1 Evaluation Modules

An evaluation module (EVM) is available to assist in the initial circuit performance evaluation using the TPS709xx. The TPS70933EVM-110 evaluation module (and related user guide) can be requested at the Texas Instruments website through the product folders or purchased directly from the TI eStore.

11.1.1.2 Spice Models

Computer simulation of circuit performance using SPICE is often useful when analyzing the performance of analog circuits and systems. A SPICE model for the TPS709 is available through the product folders under *Simulation Models*.

11.1.2 Device Nomenclature

表 11-1. Device Nomenclature(1)

PRODUCT	V_{OUT}
TPS709**xx(x)** ***yyy z*** ***or*** TPS709**xx(x)** ***yyy zM3***	**XX(X)** is the nominal output voltage. For output voltages with a resolution of 100 mV, two digits are used in the ordering number; otherwise, three digits are used (for example, 28 = 2.8 V; 125 = 1.25 V). **YYY** is the package designator. **Z** is the tape and reel quantity (R = 3000, T = 250). **M3** suffix device has same electrical specs as other devices and shares same design.

(1) For the most current package and ordering information see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.

11.2 Documentation Support

11.2.1 Related Documentation

For related documentation see the following:

11.3 サポート・リソース

TI E2E™ サポート・フォーラムは、エンジニアが検証済みの回答と設計に関するヒントをエキスパートから迅速かつ直接得ることができる場所です。既存の回答を検索したり、独自の質問をしたりすることで、設計で必要な支援を迅速に得ることができます。

リンクされているコンテンツは、該当する貢献者により、現状のまま提供されるものです。これらは TI の仕様を構成するものではなく、必ずしも TI の見解を反映したものではありません。TI の使用条件を参照してください。

11.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
すべての商標は、それぞれの所有者に帰属します。

11.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

11.6 Glossary

TI Glossary — This glossary lists and explains terms, acronyms, and definitions.

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our product life cycle.

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the TI RoHS Statement for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

OTHER QUALIFIED VERSIONS OF TPS709 :

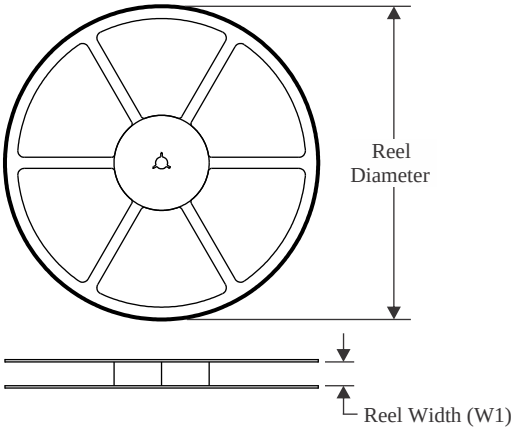
- Automotive : TPS709-Q1

NOTE: Qualified Version Definitions:

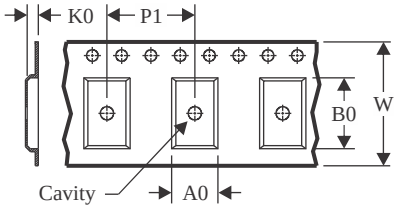
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects

TAPE AND REEL INFORMATION

REEL DIMENSIONS

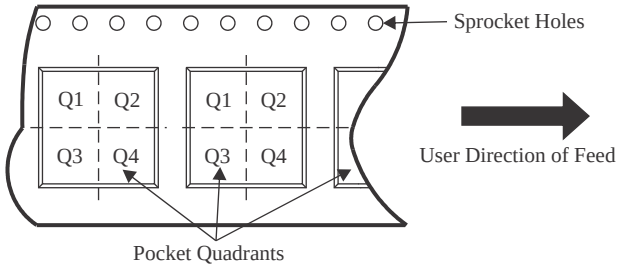


TAPE DIMENSIONS



A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE



*All dimensions are nominal

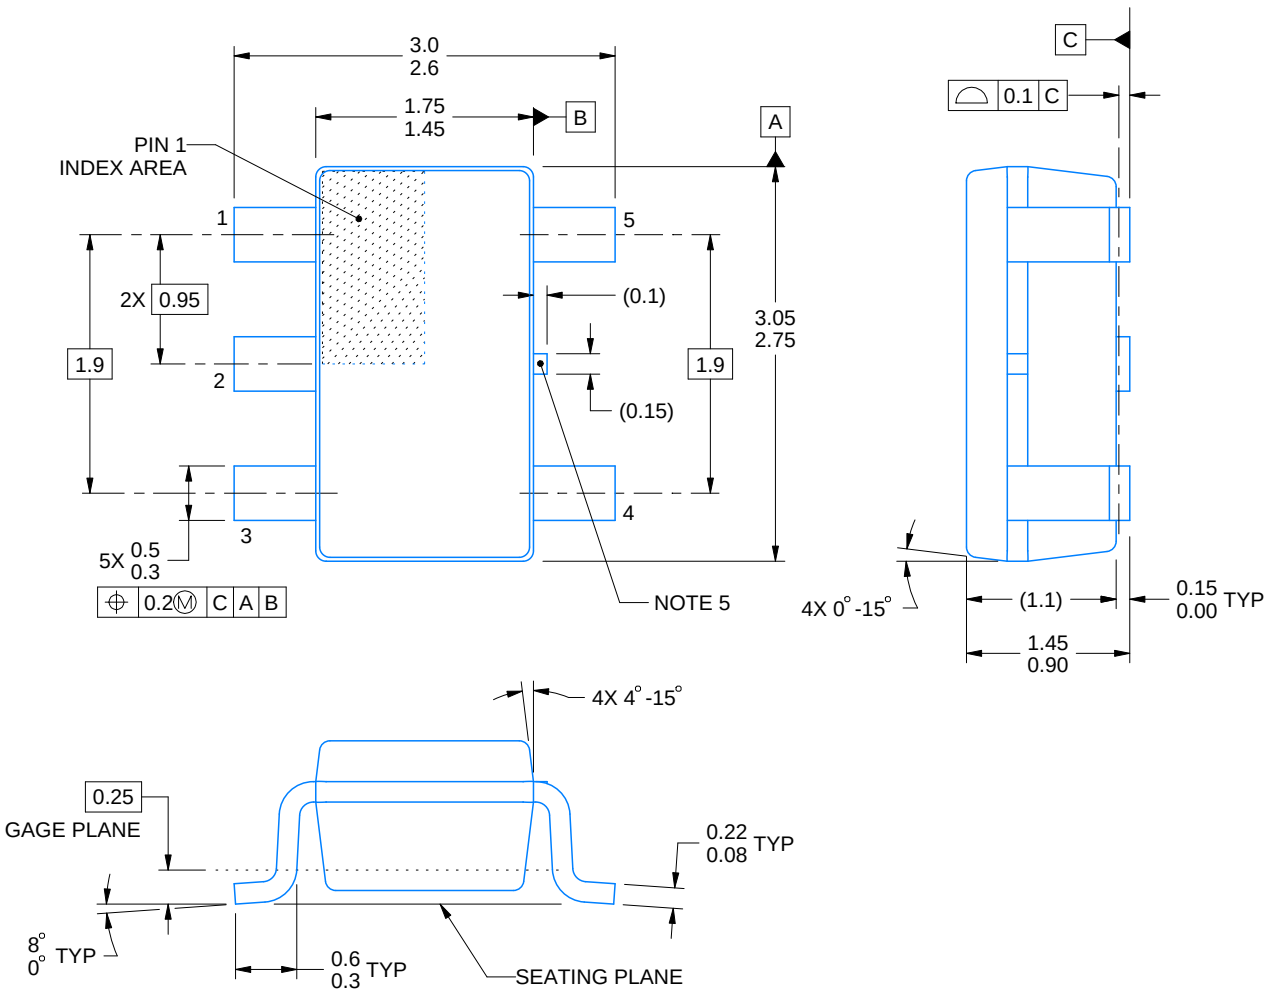
PACKAGE OUTLINE

DBV0005A

SOT-23 - 1.45 mm max height

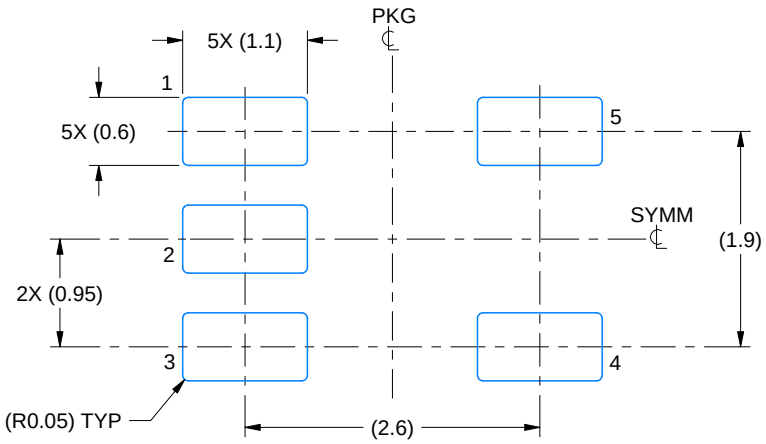
SMALL OUTLINE TRANSISTOR



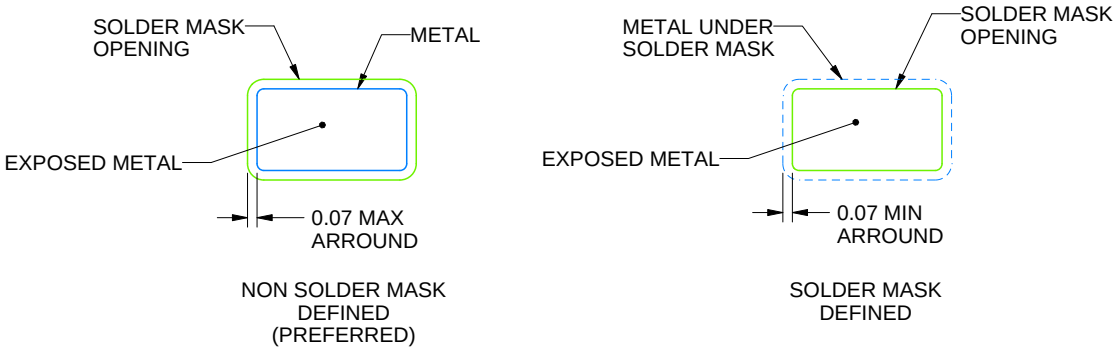
4214839/K 08/2024

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Refernce JEDEC MO-178.
4. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25 mm per side.
5. Support pin may differ or may not be present.



LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:15X

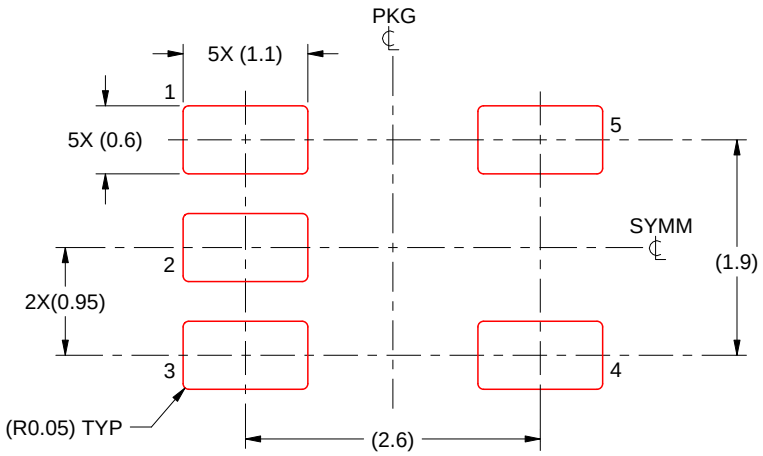


SOLDER MASK DETAILS

4214839/K 08/2024

NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.



SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:15X

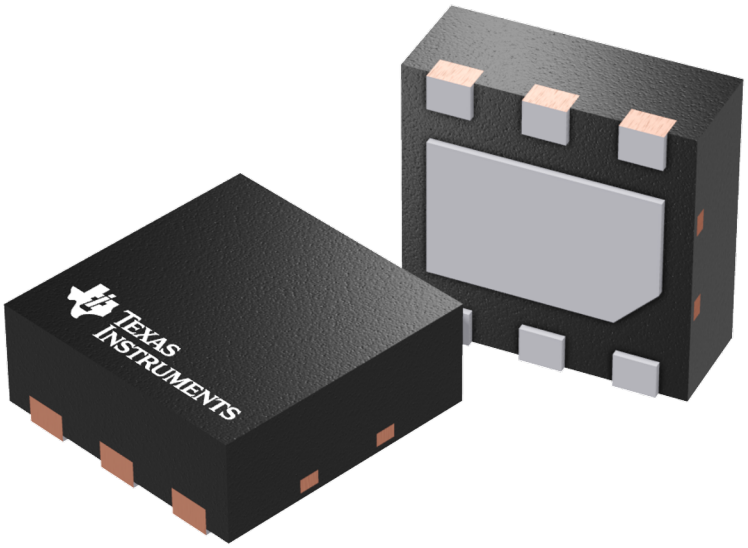
4214839/K 08/2024

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

DRV 6 WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD



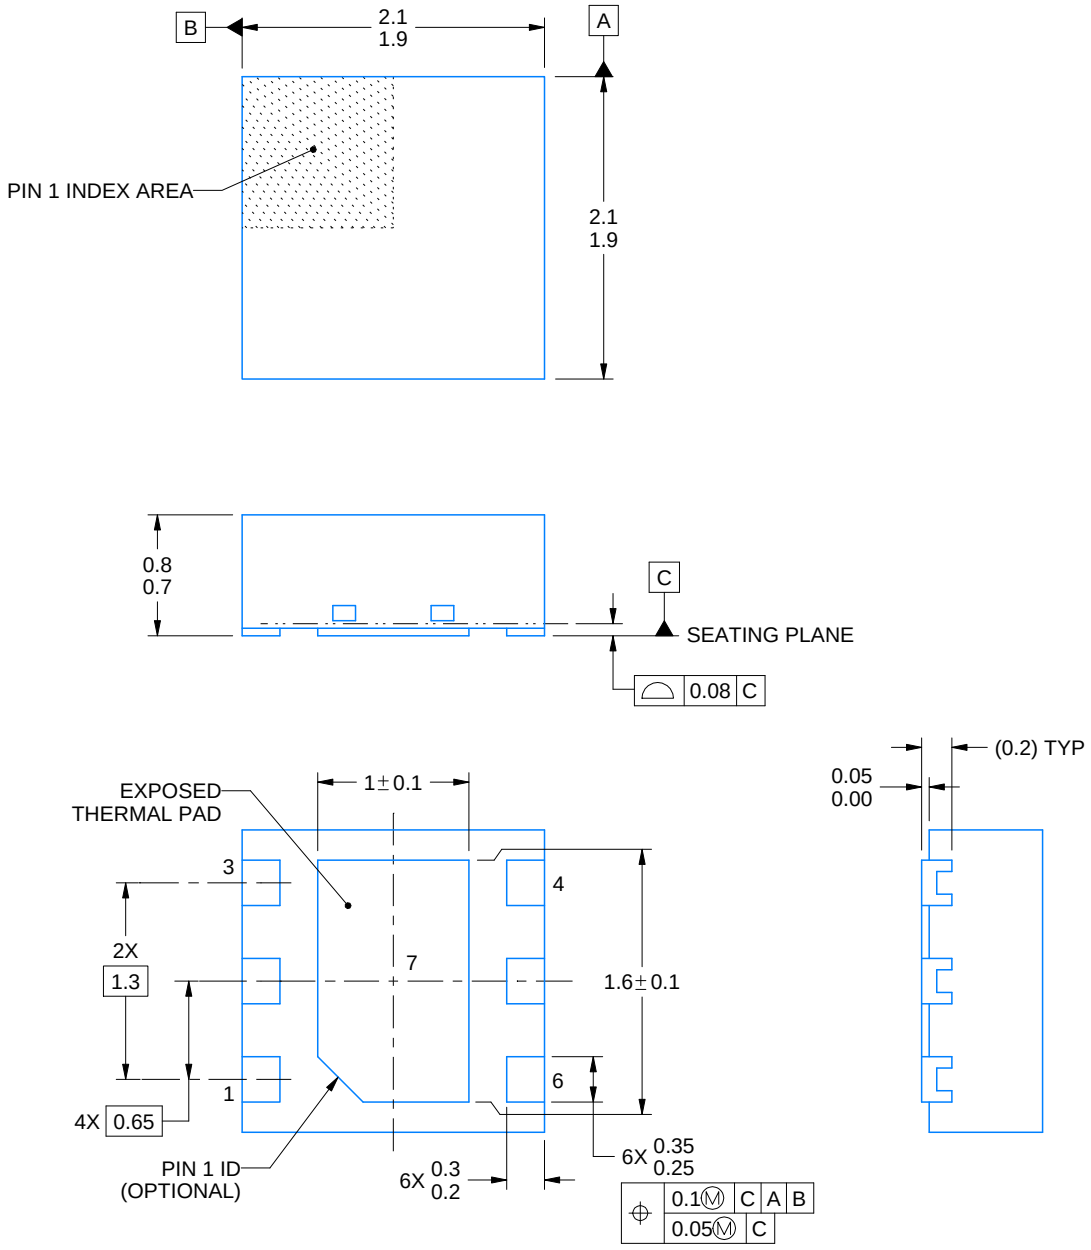
Images above are just a representation of the package family, actual package may vary.
Refer to the product data sheet for package details.

DRV0006D

PACKAGE OUTLINE

WSON - 0.8 mm max height

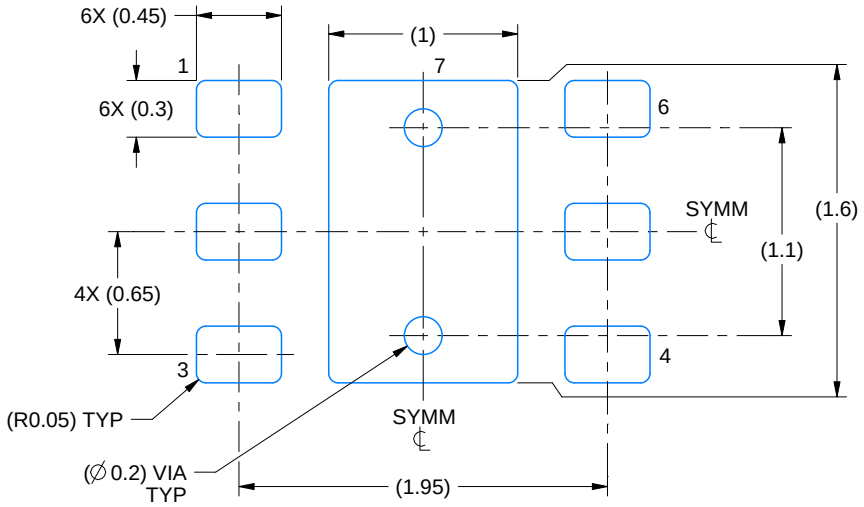
PLASTIC SMALL OUTLINE - NO LEAD



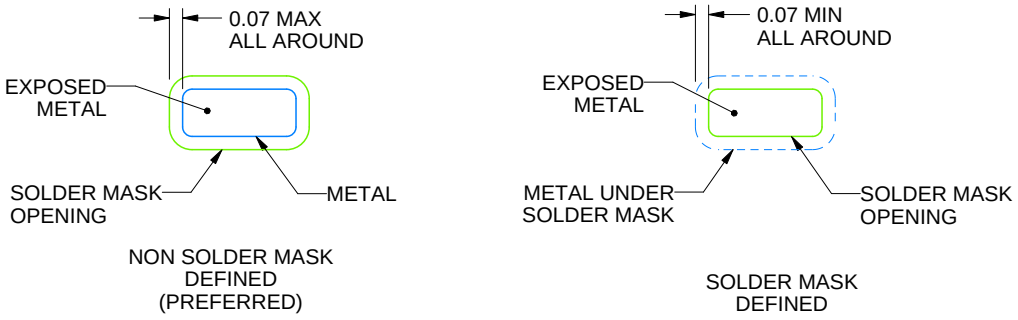
4225563/A 12/2019

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.



LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:25X

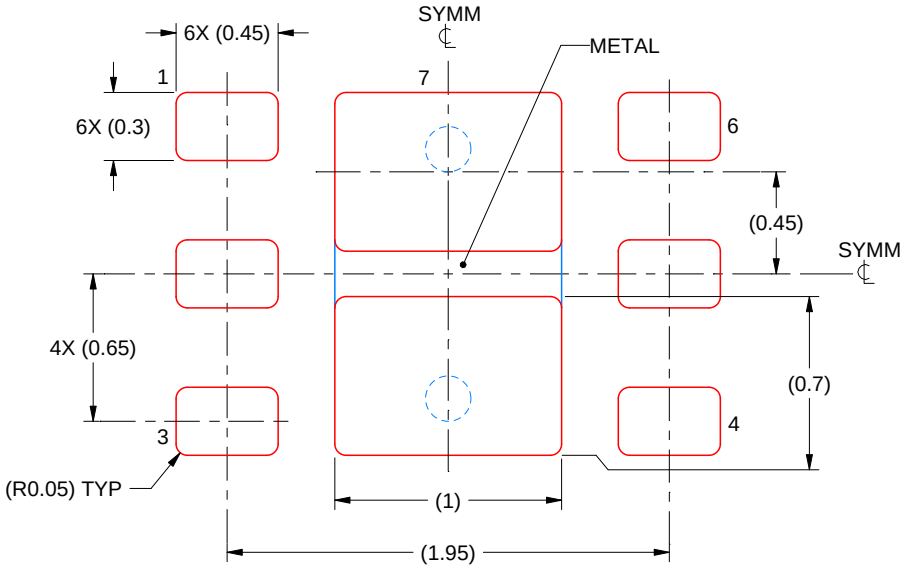


SOLDER MASK DETAILS

4225563/A 12/2019

NOTES: (continued)

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 (www.ti.com/lit/slua271).
5. Vias are optional depending on application, refer to device data sheet. If some or all are implemented, recommended via locations are shown.



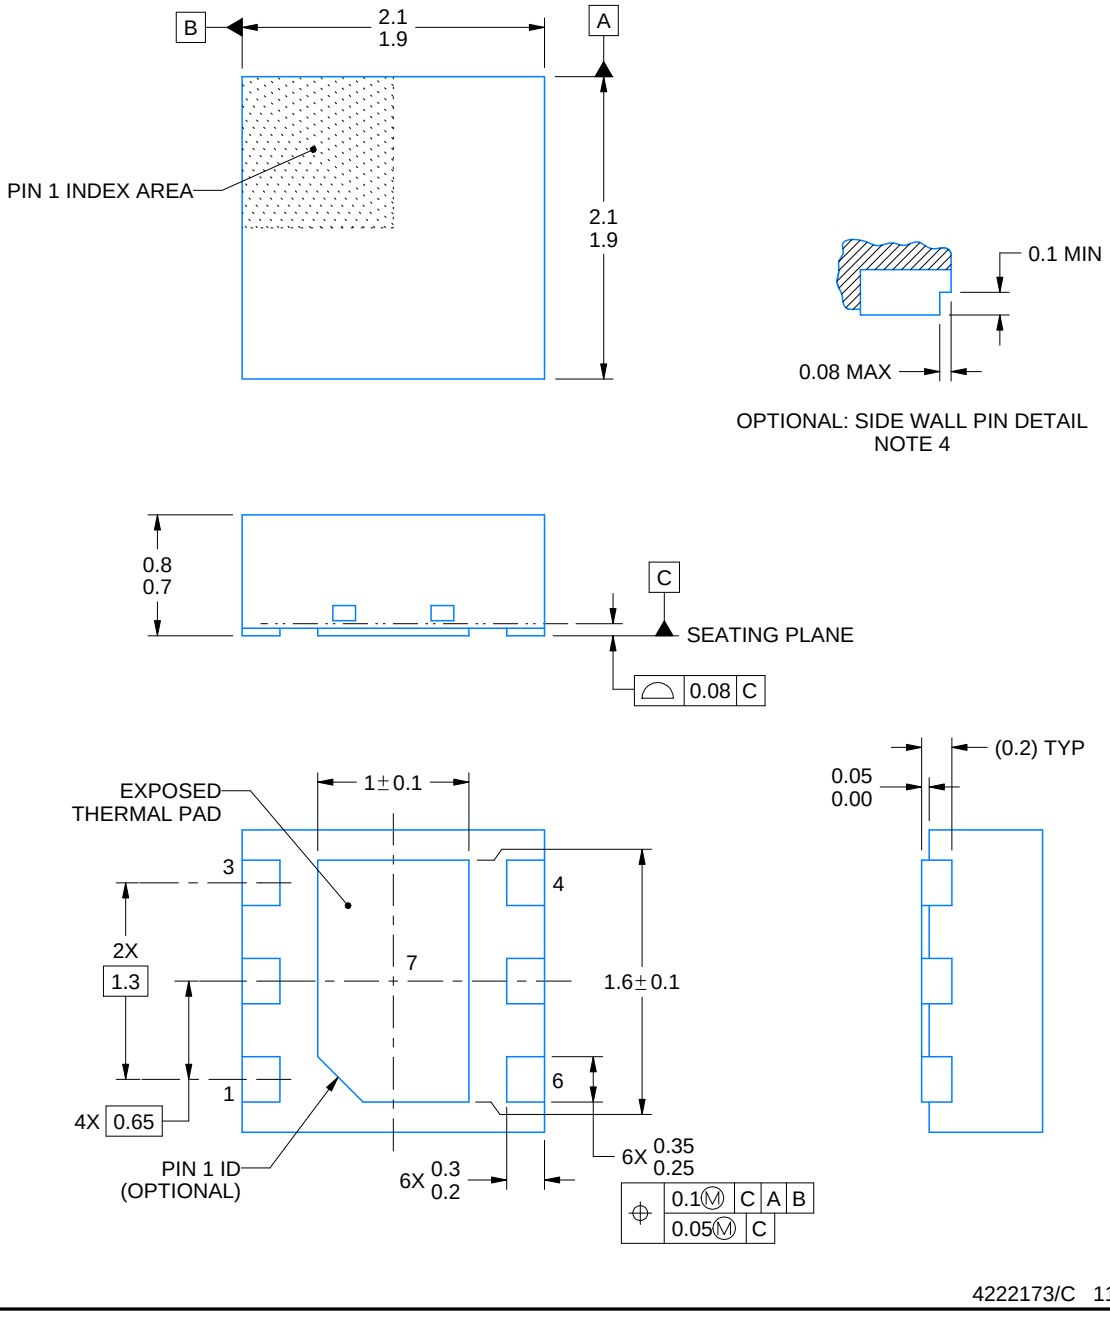
SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL

EXPOSED PAD #7
88% PRINTED SOLDER COVERAGE BY AREA UNDER PACKAGE
SCALE:30X

4225563/A 12/2019

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.



NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.
4. Minimum 0.1 mm solder wetting on pin side wall. Available for wettable flank version only.
