

TPS7A6201-Q1 静止電流25 μ A、300mA、40V、低ドロップアウト・レギュレータ

1 特長

- 車載アプリケーション用に AEC-Q100 認定取得済み
 - 温度グレード 1: -40°C~125°C、 T_A
 - 接合部温度: -40°C~150°C、 T_J
- 低いドロップアウト電圧
 - $I_{OUT} = 150mA$ で300mV
- 7V~40V の広い入力電圧範囲、最大 45V の過渡電圧に対応
- 最大出力電流: 300mA
- 超低静止電流
 - 軽負荷時に $I_{QUIESCENT} = 25\mu A$ (標準値)
 - EN = LOW のとき $I_{SLEEP} < 2\mu A$
- 出力電圧は 2.5V~7V の範囲で可変
- 低 ESR のセラミック出力安定コンデンサ
- フォルト保護機能を搭載
 - 短絡保護と過電流保護
 - サーマル・シャットダウン
- 低入力電圧トラッキング
- 熱的に強化された Power パッケージ
 - 5ピンTO-263 (KTT、D2PAK)

2 アプリケーション

- 車載用ヘッド・ユニット
- バッテリー管理システム (BMS)
- ハイブリッド・インストルメント・クラスタ

3 概要

TPS7A6201-Q1 は低ドロップアウト・リニア電圧レギュレータで、消費電力が低く、軽負荷アプリケーションで静止電流が 25 μA 未満に設計されています。このデバイスには過電流保護機能が搭載されており、低ESRのセラミック出力コンデンサでも安定して動作するように設計されています。出力電圧は外付け抵抗を使用してプログラムできます。低電圧トラッキング機能により、小型の入力コンデンサを使用でき、コールド・クランク状況では多くの場合に昇圧コンバータが不要になります。これらの機能により、このデバイスは各種の車載アプリケーション用の電源に最適です。

Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
1	VIN	I	Input voltage pin: The unregulated input voltage is supplied to this pin. A bypass capacitor shall be connected between VIN pin and GND pin to dampen input line transients.
2	EN	I	Enable pin: This is a high voltage tolerant input pin with an internal pulldown. A high input to this pin activates the device and turns the regulator ON. This input can be connected to VIN terminal for self bias applications. If this pin is not connected, the device stays disabled.
3	GND	I/O	Ground pin: This is signal ground pin of the IC.
4	FB	I	Feedback pin: This pin is used to connect external resistors to ground to program the output voltage.
5	VOUT	O	Regulated output voltage pin: This is a regulated output voltage pin with a limitation on maximum output current. An external resistor divider is connected at this pin to program the output voltage. To achieve stable operation and prevent oscillation, an external output capacitor (C _{OUT}) with low ESR shall be connected between this pin and GND pin.

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{IN} , V _{EN}	Unregulated inputs ⁽²⁾	−0.3	45	V
V _{OUT}	Regulated output		7	V
V _{FB}	Feedback voltage	−0.3	7	V
T _{OP}	Operating ambient temperature	−40	125	°C
T _{LEAD}	Lead temperature (soldering, 10 s)		260	°C
T _{stg}	Storage temperature	−65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability. All voltage values are with respect to GND.
- (2) Absolute maximum voltage for duration less than 480 ms.

6.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾⁽²⁾	±2000	V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) Tested in accordance with JEDEC Standard 22, Test Method A114-A (100-pF capacitor discharged through a 1.5-kΩ resistor into each pin).

6.3 Recommended Operating Conditions

		MIN	MAX	UNIT
V_{IN}	Unregulated input voltage	7 ⁽¹⁾	40	V
V_{EN}	Enable pin voltage	4	40	V
T_J	Operating junction temperature	–40	150	°C

- (1) V_{IN} can go down to 4 V for 130 ms or less and remain functional. If V_{IN} is less than 7 V for longer than 130 ms, then some devices may turn off until the input voltage rises above 7 V.

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾			TPS7A6201-Q1	UNIT
			KTT (TO-263)	
			5 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	High-K ⁽²⁾	30.2	°C/W
		Low-K ⁽³⁾	34.4	
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance		38.9	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance		7.4	°C/W
Ψ_{JT}	Junction-to-top characterization parameter		3.8	°C/W
Ψ_{JB}	Junction-to-board characterization parameter		7.4	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance		1.5	°C/W
θ_{JP}	Thermal impedance junction to exposed pad KTT (D2PAK) package		10.4	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.
- (2) The thermal data is based on JEDEC standard high K profile – JESD 51-5. The copper pad is soldered to the thermal land pattern. Also correct attachment procedure must be incorporated.
- (3) The thermal data is based on JEDEC standard low K profile – JESD 51-3. The copper pad is soldered to the thermal land pattern. Also correct attachment procedure must be incorporated.

6.5 Electrical Characteristics

$V_{IN} = 14$ V, $T_J = -40^{\circ}\text{C}$ to 150°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
INPUT VOLTAGE (VIN PIN)						
V_{IN}	Input voltage		7 ⁽¹⁾		40	V
$I_{QUIESCENT}$	Quiescent current	$V_{IN} = 8.2$ V to 18 V, $V_{EN} = 5$ V, $I_{OUT} = 0.01$ mA to 0.75 mA		25	40	μA
I_{SLEEP}	Sleep/shutdown current	$V_{IN} = 8.2$ V to 18 V, $V_{EN} < 0.8$ V, $I_{OUT} = 0$ mA (no load), $T_A = 125^{\circ}\text{C}$			3	μA
$V_{IN-UVLO}$	Undervoltage lockout voltage	Ramp V_{IN} down until output is turned OFF		3.16		V
$V_{IN(POWERUP)}$	Power-up voltage	Ramp V_{IN} up until output is turned ON		3.45		V
ENABLE INPUT (EN PIN)						
V_{IL}	Logic input low level		0		0.8	V
V_{IH}	Logic input high level		2.5		40	V
REGULATED OUTPUT VOLTAGE (VOUT PIN)						
V_{REF}	Internal Reference Voltage	$I_{OUT} = 10$ mA to 300 mA, $V_{IN} = V_{OUT} + 1$ V to 16 V	–2%		2%	
$\Delta V_{LINE-REG}$	Line regulation	$V_{IN} = 6$ V to 28 V, $I_{OUT} = 10$ mA, $V_{OUT} = 7$ V			15	mV
		$[V_{IN} = 6$ V to 28 V, $I_{OUT} = 10$ mA, $V_{OUT} = 3.3$ V] ⁽²⁾			20	
$\Delta V_{LOAD-REG}$	Load regulation	$I_{OUT} = 10$ mA to 300 mA, $V_{IN} = 14$ V, $V_{OUT} = 7$ V			25	mV
		$[I_{OUT} = 10$ mA to 300 mA, $V_{IN} = 14$ V, $V_{OUT} = 3.3$ V] ⁽²⁾			35	

- (1) V_{IN} can go down to 4 V for 130 ms or less and remain functional. If V_{IN} is less than 7 V for longer than 130 ms, then some devices may turn off until the input voltage rises above 7 V.
- (2) Specified by design – not tested.

Electrical Characteristics (continued)

 $V_{IN} = 14\text{ V}$, $T_J = -40^{\circ}\text{C}$ to 150°C (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V _{DROPOUT} ⁽³⁾	Dropout voltage (V _{IN} – V _{OUT})	I _{OUT} = 250 mA			500	mV
		I _{OUT} = 150 mA			300	
R _{SW} ⁽²⁾	Switch resistance	V _{IN} to V _{OUT} resistance			2	Ω
I _{OUT}	Output current	V _{OUT} in regulation	0		300	mA
I _{CL}	Output current limit	V _{OUT} = 0 V (V _{OUT} pin is shorted to ground)	350		1000	mA
PSRR ⁽²⁾	Power supply ripple rejection	V _{IN-RIPPLE} = 0.5 V _{pp} , I _{OUT} = 300 mA, frequency = 100 Hz, V _{OUT} = 5 V and V _{OUT} = 3.3 V		60		dB
		V _{IN-RIPPLE} = 0.5 V _{pp} , I _{OUT} = 300 mA, frequency = 150 kHz, V _{OUT} = 5 V and V _{OUT} = 3.3 V		30		
OPERATING TEMPERATURE RANGE						
T _J	Operating junction temperature		–40		150	°C
T _{SHUTDOWN}	Thermal shutdown trip point			165		°C
T _{HYST}	Thermal shutdown hysteresis			10		°C

(3) This test is done with V_{OUT} is in regulation and $V_{IN} - V_{OUT}$ parameter is measured when V_{OUT} (programmed output voltage, for example, 5 V or 3.3 V) drops by 100 mV at specified loads.

7 Detailed Description

7.1 Overview

The TPS7A6201-Q1 device is a monolithic, low-dropout linear voltage regulator with programmable output voltage and integrated fault protection. This voltage regulator is designed for low power consumption and quiescent current less than 25 μ A in light-load applications.

This device is available in the 5-pin package option TO-263 (D2PAK/TO-263).

The following section describes the features of TPS7A6201-Q1 voltage regulator in detail.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Power Up

During power up, the regulator incorporates a protection scheme to limit the current through pass element and output capacitor. When the input voltage exceeds a certain threshold ($V_{IN(PowerUp)}$) level, the output voltage begins to ramp up as shown in [Figure 15](#).

Figure 15. Power-Up Operation

7.3.2 Adjustable Output Voltage

The regulated output voltage (V_{OUT}) can be programmed by connecting external resistors to FB pin. Calculate the feedback resistor values using [Equation 1](#).

$$V_{OUT} = V_{REF} \left[1 + \frac{R1}{R2} \right]$$

where

- V_{OUT} = desired output voltage
 - V_{REF} = reference voltage ($V_{REF} = 1.23$ V typically)
 - $R1, R2$ = feedback resistors (see the [Functional Block Diagram](#))
- (1)

The overall tolerance of the regulated output voltage depends on the tolerance of internal reference voltage and external feedback resistors, and is given by [Equation 2](#).

$$\text{tol}_{V_{OUT}} = \text{tol}_{V_{REF}} + \left[\frac{R1}{R1 + R2} \right] [\text{tol}_{R1} + \text{tol}_{R2}]$$

where

- $\text{tol}_{V_{OUT}}$ = tolerance of output voltage
 - $\text{tol}_{V_{REF}}$ = tolerance of internal reference voltage ($\text{tol}_{V_{REF}} = \pm 1.5\%$ typically)
 - $\text{tol}_{R1}, \text{tol}_{R2}$ = tolerance of feedback resistors $R1, R2$
- (2)

For a tighter tolerance on V_{OUT} , select lower-value feedback resistors. TI recommends selecting feedback resistors such that the sum of $R1$ and $R2$ is between 20 k Ω and 200 k Ω .

7.3.3 Enable Input

This device has a high-voltage-tolerant EN pin that can be used to enable and disable a device from an external microcontroller or a digital control circuit. A high input to this pin activates the device and turns the regulator on. This input can also be connected to V_{IN} terminal for self bias applications. An internal pulldown resistor is connected to this pin; therefore, if this pin is left unconnected, the device stays disabled.

Feature Description (continued)

7.3.4 Charge Pump Operation

This device has an internal charge pump which turns on or off depending on the input voltage and the output current. The charge pump switching circuitry shall not cause conducted emissions to exceed required thresholds on the input voltage line. For a given output current, the charge pump stays on at lower input voltages and turns off at higher input voltages. The charge pump switching thresholds are hysteretic. Figure 16 and Figure 17 shows typical switching thresholds for the charge pump at light ($I_{OUT} < \sim 2$ mA) and heavy ($I_{OUT} > \sim 2$ mA) loads respectively.

Figure 16. Charge Pump Operation at Light Loads

Figure 17. Charge Pump Operation at Heavy Loads

7.3.5 Undervoltage Shutdown

This device has an integrated undervoltage lockout (UVLO) circuit to shut down the output if the input voltage (V_{IN}) falls below an internally fixed UVLO threshold level ($V_{IN-UVLO}$); see Figure 18. This ensures that the regulator is not latched into an unknown state during low input voltage conditions. The regulator normally powers up when the input voltage exceeds the $V_{IN(PowerUp)}$ threshold.

7.3.6 Low Voltage Tracking

At low-input voltages, the regulator drops out of regulation, and the output voltage tracks input minus a voltage based on the load current and switch resistance (see Figure 18). This allows for a smaller input capacitor and can possibly eliminate the need of using a boost converter during cold crank conditions.

Feature Description (continued)

Figure 18. Low Voltage Tracking Operation

7.3.7 Integrated Fault Protection

The device features integrated fault protection, making it ideal for use in automotive applications. To keep the device in safe area of operation during certain fault conditions, internal current-limit protection and current-limit foldback are used to limit the maximum output current. This protects the device from excessive power dissipation. For example, during a short-circuit condition on the output, current through the pass element is limited to I_{CL} to protect the device from excessive power dissipation.

7.3.8 Thermal Shutdown

The device incorporates a thermal shutdown (TSD) circuit as protection from overheating. For continuous normal operation, the junction temperature must not exceed the TSD trip point. If the junction temperature exceeds the TSD trip point, the output is turned off. When the junction temperature falls below TSD trip point, the output is turned on again, as shown in Figure 19.

Figure 19. Thermal Cycling Waveform for TPS7A6201-Q1 ($V_{IN} = 24\text{ V}$, $I_{OUT} = 300\text{ mA}$, $V_{OUT} = 5\text{ V}$)

7.4 Device Functional Modes

7.4.1 Low Power Mode

At light loads and high-input voltages ($V_{IN} >$ approximately 8 V such that charge pump is off) the device operates in low power mode, and the quiescent current consumption is reduced to 25 μ A (typical) as shown in [Table 1](#).

Table 1. Typical Quiescent Current Consumption

I_{OUT}	CHARGE PUMP ON	CHARGE PUMP OFF
$I_{OUT} <$ approximately 2 mA (Light load)	250 μ A	25 μ A (Low Power Mode)
$I_{OUT} >$ approximately 2 mA (Heavy load)	280 μ A	70 μ A

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The TPS7A6201-Q1 is a low-dropout linear voltage regulator designed for low power consumption and quiescent current less than 25 μ A in light-load applications.

8.2 Typical Application

Figure 20 shows the typical application circuit for the TPS7A6201-Q1 device. Depending upon an end application, different values of external components may be used. To program the output voltage, feedback resistors (R1 and R2) must be carefully selected. Using small resistors results in higher current consumption, whereas, using very large resistors impacts the sensitivity of the regulator. Therefore, TI recommends selecting feedback resistors such that the sum of R1 and R2 is between 20 k Ω and 200 k Ω . Also, the overall tolerance of the regulated output voltage depends on the tolerance of the internal reference voltage and external feedback resistors.

A larger output capacitor may be required during fast load steps to prevent output from temporarily dropping down. TI recommends a low-ESR ceramic capacitor with a dielectric of type X5R or X7R. Additionally, a bypass capacitor can be connected at the output to decouple high-frequency noise as per the end application.

Example: If the desired regulated output voltage is 5 V, upon selecting R2, R1 can be calculated using Equation 1 (and vice versa). Knowing $V_{REF} = 1.23$ V (typical), $V_{OUT} = 5$ V, and selecting R2 = 20 k Ω , R1 is calculated to be 61.3 k Ω .

Figure 20. Typical Application Schematic for TPS7A6201-Q1

8.2.1 Design Requirements

Table 2 lists the design parameters for this example.

Table 2. Design Parameters

PARAMETER	EXAMPLE VALUE
Input voltage range	7 V to 40 V
Output voltage	5 V
Output current rating	200 mA
Output capacitor range	10 μ F to 47 μ F
Output capacitor ESR range	10 m Ω to 10 Ω

8.2.2 Detailed Design Procedure

To begin the design process, determine the following:

- Input voltage range
- Output voltage
- Output current rating
- Input capacitor
- Output capacitor

8.2.2.1 Input Capacitor

The device requires an input bypass capacitor, the value of which depends on the application. The typical recommended value for the bypass capacitor is 10 μ F. The voltage rating must be greater than the maximum input voltage.

8.2.2.2 Output Capacitor

The device requires an output capacitor to stabilize the output voltage. TI recommends selecting a capacitor between 10 μF and 47 μF with ESR range from 10 m Ω to 10 Ω .

8.2.2.3 Feedback Resistor

The regulated output voltage (VOUT) can be programmed by connecting external resistors to FB pin. Calculate the feedback resistor values using [Equation 1](#) ($R_1 = 61.3\text{K } \Omega$, $R_2 = 20\text{K } \Omega$).

8.2.3 Application Curve

Figure 21. Load Transient Waveform

9 Power Supply Recommendations

Design of the device is for operation from an input voltage supply with a range from 7 V to 40 V. This input supply must be well regulated. If the input supply is located more than a few inches from the device, TI recommends adding an electrolytic capacitor with a value of 22 μF and a ceramic bypass capacitor at the input.

10 Layout

10.1 Layout Guidelines

For the LDO power supply, especially these high voltage and large current ones, layout is an important step. If layout is not carefully designed, the regulator could not deliver enough output current because of the thermal limitation. To improve the thermal performance of the device, and maximize the current output at high ambient temperature, TI recommends spreading the thermal pad as large as possible and place enough thermal vias on the thermal pad. [Figure 25](#) provides an example layout.

10.1.1 Power Dissipation and Thermal Considerations

Calculate the power dissipated in the device using [Equation 3](#).

$$P_D = I_{OUT} \times (V_{IN} - V_{OUT}) + I_{QUIESCENT} \times V_{IN}$$

where

- P_D = continuous power dissipation
- I_{OUT} = output current
- V_{IN} = input voltage
- V_{OUT} = output voltage
- $I_{QUIESCENT}$ = quiescent current

(3)

As $I_{QUIESCENT} \ll I_{OUT}$, therefore, the term $I_{QUIESCENT} \times V_{IN}$ in [Equation 3](#) can be ignored.

For device under operation at a given ambient air temperature (T_A), calculate the junction temperature (T_J) [Equation 4](#).

$$T_J = T_A + (R_{\theta JA} \times P_D)$$

where

- $R_{\theta JA}$ = junction to ambient air thermal impedance

(4)

Calculate the rise in junction temperature due to power dissipation using [Equation 5](#).

$$\Delta T = T_J - T_A = (R_{\theta JA} \times P_D)$$

(5)

For a given maximum junction temperature (T_{J-Max}), calculate the maximum ambient air temperature (T_{A-Max}) at which the device can operate using [Equation 6](#).

$$T_{A-Max} = T_{J-Max} - (R_{\theta JA} \times P_D)$$

(6)

Example

If $I_{OUT} = 100$ mA, $V_{OUT} = 5$ V, $V_{IN} = 14$ V, $I_{QUIESCENT} = 250$ μ A, and $R_{\theta JA} = 30^\circ\text{C/W}$, the continuous power dissipated in the device is 0.9 W. The rise in junction temperature due to power dissipation is 27°C . For a maximum junction temperature of 150°C , maximum ambient air temperature at which the device can operate is 123°C .

For adequate heat dissipation, TI recommends soldering the thermal pad (exposed heat sink) to thermal land pad on the PCB. Doing this provides a heat conduction path from die to the PCB and reduces overall package thermal resistance. [Figure 22](#) illustrates the power derating curves for the TPS7A6201-Q1 device in the KTT (TO-263) package..

Layout Guidelines (continued)

Figure 22. Power Derating Curves

For optimum thermal performance, TI recommends using a high-K PCB with thermal vias between ground plane and solder pad or thermal land pad. This is shown in [Figure 23](#) (a) and (b). Furthermore, heat spreading capabilities of a PCB can be considerably improved by using a thicker ground plane and a thermal land pad with a larger surface area.

Figure 23. Using Multilayer PCB and Thermal Vias for Adequate Heat Dissipation

Layout Guidelines (continued)

Keeping other factors constant, surface area of the thermal land pad contributes to heat dissipation only to a certain extent. Figure 24 shows a variation of $R_{\theta JA}$ with surface area of the thermal land pad (soldered to the exposed pad) for KTT package.

Figure 24. $R_{\theta JA}$ vs Thermal Pad Area

TPS7A6201QKTTRQ1	Active	Production	DDPAK/ TO-263 (KTT) 5	500 LARGE T&R	Yes	SN	Level-3-245C-168 HR	-40 to 125	7A6201Q1
TPS7A6201QKTTRQ1.A	Active	Production	DDPAK/ TO-263 (KTT) 5	500 LARGE T&R	Yes	SN	Level-3-245C-168 HR	-40 to 125	7A6201Q1

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "-" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TPS7A6201QKTTRQ1	DDPAK/TO-263	KTT	5	500	330.0	24.4	10.6	15.8	4.9	16.0	24.0	Q2

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)

KTT (R-PSFM-G5)

PLASTIC FLANGE-MOUNT PACKAGE

4200577-4/G 01/13

KTT (R-PSFM-G5)

PLASTIC FLANGE-MOUNT PACKAGE

- NOTES:
- All linear dimensions are in millimeters.
 - This drawing is subject to change without notice.
 - Publication IPC-SM-782 is recommended for alternate designs.
 - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525.
 - Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
 - This package is designed to be soldered to a thermal pad on the board. Refer to the Product Datasheet for specific thermal information, via requirements, and recommended thermal pad size. For thermal pad sizes larger than shown a solder mask defined pad is recommended in order to maintain the solderable pad geometry while increasing copper area.

MECHANICAL DATA

KVU (R-PSFM-G5)

PLASTIC FLANGE-MOUNT PACKAGE

NOTES:

- A. All linear dimensions are in inches (millimeters).
B. This drawing is subject to change without notice.
C. The center lead is in electrical contact with the exposed thermal tab.
D. Body Dimensions do not include mold flash or protrusions. Mold flash and protrusion shall not exceed 0.006 (0,15) per side.
E. Falls within JEDEC TO-252 variation AD.

重要なお知らせと免責事項

TI は、技術データと信頼性データ (データシートを含みます)、設計リソース (リファレンス デザインを含みます)、アプリケーションや設計に関する各種アドバイス、Web ツール、安全性情報、その他のリソースを、欠陥が存在する可能性のある「現状のまま」提供しており、商品性および特定目的に対する適合性の黙示保証、第三者の知的財産権の非侵害保証を含むいかなる保証も、明示的または黙示的にかかわらず拒否します。

これらのリソースは、TI 製品を使用する設計の経験を積んだ開発者への提供を意図したものです。(1) お客様のアプリケーションに適した TI 製品の選定、(2) お客様のアプリケーションの設計、検証、試験、(3) お客様のアプリケーションに該当する各種規格や、その他のあらゆる安全性、セキュリティ、規制、または他の要件への確実な適合に関する責任を、お客様のみが単独で負うものとし、TI は一切の責任を拒否します。
