

TS3A4751 0.9Ω、低電圧、单電源、クワッド SPST アナログ・スイッチ

1 特長

- 低いオン抵抗 (R_{ON})
 - 最大値 0.9Ω (3V 電源)
 - 最大値 1.5Ω (1.8V 電源)
- R_{ON} の平坦性：最大 0.4Ω (3V)
- R_{ON} のチャネル間ばらつき
 - 最大値 0.05Ω (3V 電源)
 - 最大値 0.15Ω (1.8V 電源)
- 1.6V~3.6V の單一電源で動作
- 1.8V CMOS ロジックと互換 (3V 電源)
- 大電流処理能力 (連続 100mA)
- 高速スイッチング : $t_{ON} = 5\text{ns}$, $t_{OFF} = 4\text{ns}$
- デジタルとアナログの両方のアプリケーションに対応
- JESD 22 を超える ESD 保護
 - 人体モデルで ±4000V (A114-A)
 - マシン・モデルで 300V (A115-A)
 - 荷電デバイス・モデルで ±1000V (C101)

2 アプリケーション

- 電力ルーティング
- バッテリ駆動システム
- オーディオおよびビデオ信号のルーティング
- 低電圧のデータ収集システム
- 通信回路
- PCMCIA カード
- 携帯電話
- モデム
- ハードディスク

3 概要

TS3A4751 デバイスは双方向、4 チャネル、常時開 (NO) の単極单投 (SPST) アナログ・スイッチで、1.6V~3.6V の單一電源で動作します。このデバイスはスイッチングが高速で、レール・ツー・レールのアナログ信号を扱うことができ、静止電力の消費が非常に小さいのが特長です。

3V 電源を使用するとき、デジタル入力は 1.8V CMOS 互換です。

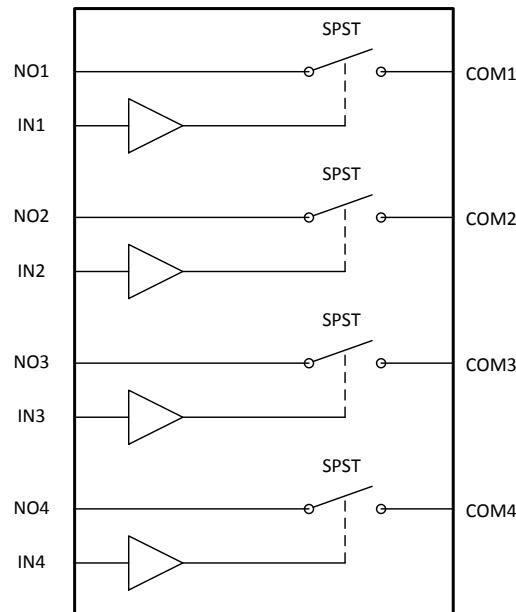

TS3A4751 デバイスには 4 つの常時開 (NO) スイッチがあります。TS3A4751 は、14 ピンのシン・シュリンク・スマートアウトライン・パッケージ (TSSOP) と、省スペースの 14 ピン VQFN (RGY) およびマイクロ X2QFN (RUC) パッケージで供給されます。

製品情報⁽¹⁾

型番	パッケージ	本体サイズ(公称)
TS3A4751	TSSOP (14)	5.00mm×4.40mm
	VQFN (14)	3.50mm×3.50mm
	X2QFN (14)	2.00mm×2.00mm

(1) 利用可能なすべてのパッケージについては、このデータシートの末尾にある注文情報を参照してください。

5 Pin Configuration and Functions

If the exposed center pad is used, it must be connected as a secondary ground or left electrically open.

Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
1	NO1	I/O	Normally open signal path
2	COM1	I/O	Common signal path
3	NO2	I/O	Normally open signal path
4	COM2	I/O	Common signal path
5	IN2	I	Logic control input
6	IN3	I	Logic control input
7	GND	—	Ground
8	NO3	I/O	Normally open signal path
9	COM3	I/O	Common signal path
10	COM4	I/O	Common signal path
11	NO4	I/O	Normally open signal path
12	IN4	I	Logic control input
13	IN1	I	Logic control input
14	V _{CC}	I	Positive supply voltage

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{CC}	Supply voltage referenced to GND ⁽²⁾	-0.3	4	V
V _{NO} V _{COM}	Analog and digital voltage	-0.3	V _{CC} + 0.3	V
V _{IN}				
I _{NO} I _{COM}	On-state switch current	V _{NO} , V _{COM} = 0 to V _{CC}	-100	100 mA
I _{CC} I _{GND}	Continuous current through V _{CC} or GND		±100	mA
V	Peak current pulsed at 1 ms, 10% duty cycle	COM, V _{I/O}	±200	mA
T _A	Operating temperature	-40	85	°C
T _J	Junction temperature		150	°C
T _{stg}	Storage temperature	-65	150	°C

(1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) Signals on COM or NO exceeding V_{CC} or GND are clamped by internal diodes. Limit forward diode current to maximum current rating.

6.2 ESD Ratings

		VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±4000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 or ANSI/ESDA/JEDEC JS-002 ⁽²⁾	±1000
		Machine Model	±300

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V _{CC}	Supply Voltage	1.65	3.6	V
V _{NO} V _{COM} V _{IN}	Analog and digital voltage range	0	V _{CC}	V

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾	TS3A4751			UNIT
	PW	RGY	RUC	
	14 PINS			
R _{θJA}	Junction-to-ambient thermal resistance	132.3	68.5	196.4
R _{θJC(top)}	Junction-to-case (top) thermal resistance	60.6	83.1	73.9
R _{θJB}	Junction-to-board thermal resistance	74.2	44.6	130.7
Ψ _{JT}	Junction-to-top characterization parameter	11.2	7.8	2.1
Ψ _{JB}	Junction-to-board characterization parameter	73.6	44.7	130.6
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	N/A	24.6	N/A

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).

(1) The algebraic convention, whereby the most negative value is a minimum and the most positive value is a maximum.

(2) Parts are tested at 85°C and specified by design and correlation over the full temperature range.

(3) Typical values are at $T_A = 25^\circ\text{C}$.

(4) $\Delta R_{on} = R_{on(\text{max})} - R_{on(\text{min})}$

(5) Flatness is defined as the difference between the maximum and minimum value of r_{on} as measured over the specified analog signal ranges.

(6) Leakage parameters are 100% tested at the maximum-rated hot operating temperature and specified by correlation at $T_A = 25^\circ\text{C}$.

(7) OFF isolation = $20_{\log 10}(V_{COM}/V_{NO})$, V_{COM} = output, V_{NO} = input to OFF switch

6.6 Electrical Characteristics for 3-V Supply

$V_{CC} = 2.7 \text{ V}$ to 3.6 V , $T_A = -40^\circ\text{C}$ to 85°C , $V_{IH} = 1.4 \text{ V}$, $V_{IL} = 0.5 \text{ V}$ (unless otherwise noted).⁽¹⁾ ⁽²⁾

7 Detailed Description

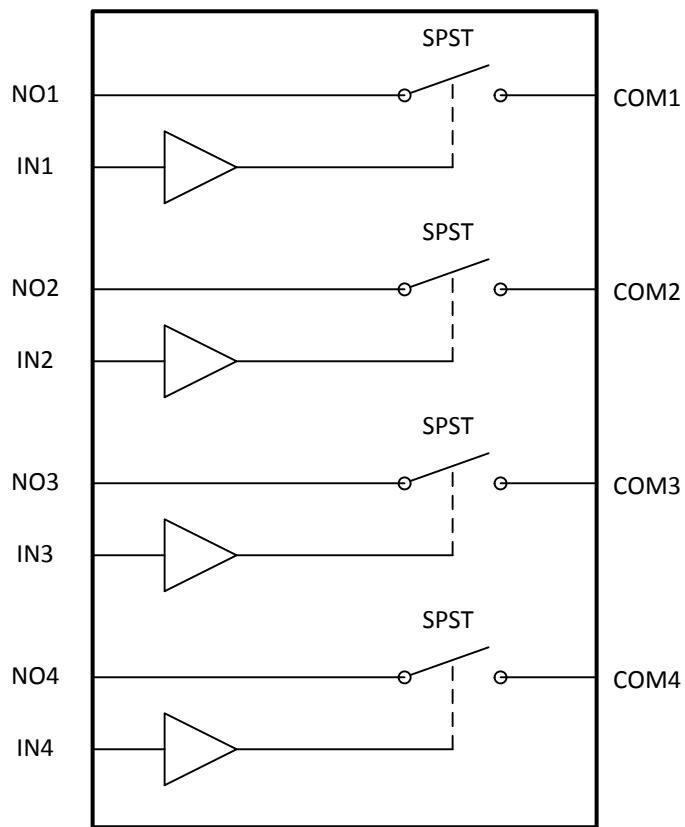

7.1 Overview

The TS3A4751 is a bidirectional, 4-channel, normally open (NO) single-pole single-throw (SPST) analog switch that operates from a single 1.6-V to 3.6-V supply. This device has fast switching speeds, handles rail-to-rail analog signals, and consumes very low quiescent power.

The digital input is 1.8-V CMOS compatible when using a 3-V supply.

The TS3A4751 has four normally open (NO) switches. The TS3A4751 is available in a 14-pin thin shrink small-outline package (TSSOP) and in space-saving 14-pin VQFN (RGY) and micro X2QFN (RUC) packages.

7.2 Functional Block Diagram

7.3 Feature Description

This device has fast switching speeds, handles rail-to-rail analog signals, and consumes very low quiescent power.

The digital input is 1.8-V TTL/CMOS compatible when using a 3-V supply.

7.4 Device Functional Modes

Table 1. Function Table

L	OFF
H	ON

8 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

8.1.1 Logic Inputs

The TS3A4751 logic inputs can be driven up to 3.6 V, regardless of the supply voltage. For example, with a 1.8-V supply, IN may be driven low to GND and high to 3.6 V. Driving IN rail to rail minimizes power consumption.

8.1.2 Analog Signal Levels

Analog signals that range over the entire supply voltage (V_{CC} to GND) can be passed with very little change in R_{on} (see [Typical Characteristics](#)). The switches are bidirectional, so NO and COM can be used as either inputs or outputs.

8.2 Typical Application

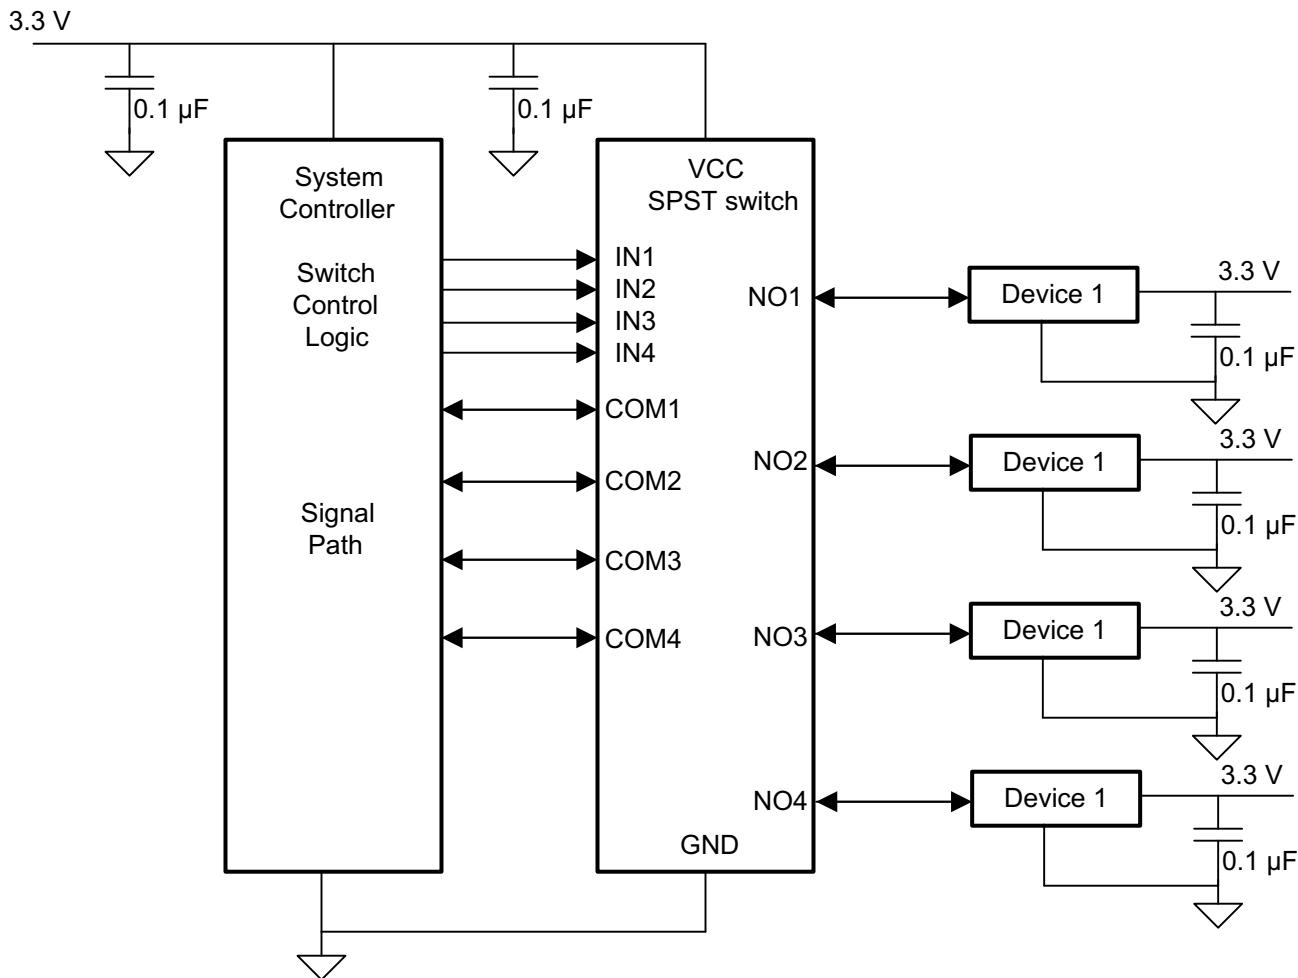

Figure 19. Typical Application Diagram

Typical Application (continued)

8.2.1 Design Requirements

Ensure that all of the signals passing through the switch are within the specified ranges to ensure proper performance.

8.2.2 Detailed Design Procedure

The TS3A4751 can be properly operated without any external components. However, it is recommended that unused pins should be connected to ground through a $50\text{-}\Omega$ resistor to prevent signal reflections back into the device. It is also recommended that the digital control pins (INX) be pulled up to V_{CC} or down to GND to avoid undesired switch positions that could result from the floating pin.

8.2.3 Application Curve

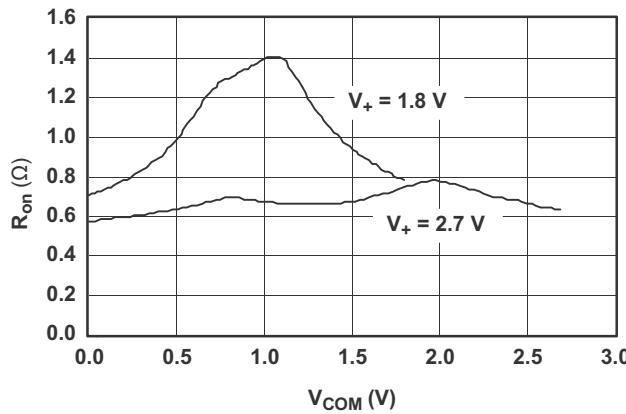

Figure 20. R_{on} vs V_{COM}

9 Power Supply Recommendations

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings can cause permanent damage to the devices. Always sequence V_{CC} on first, followed by NO or COM.

Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the V_{CC} supply to other components. A 0.1- μ F capacitor, connected from V_{CC} to GND, is adequate for most applications.

10 Layout

10.1 Layout Guidelines

High-speed switches require proper layout and design procedures for optimum performance.

Reduce stray inductance and capacitance by keeping traces short and wide.

Ensure that bypass capacitors are as close to the device as possible.

Use large ground planes where possible.

10.2 Layout Example

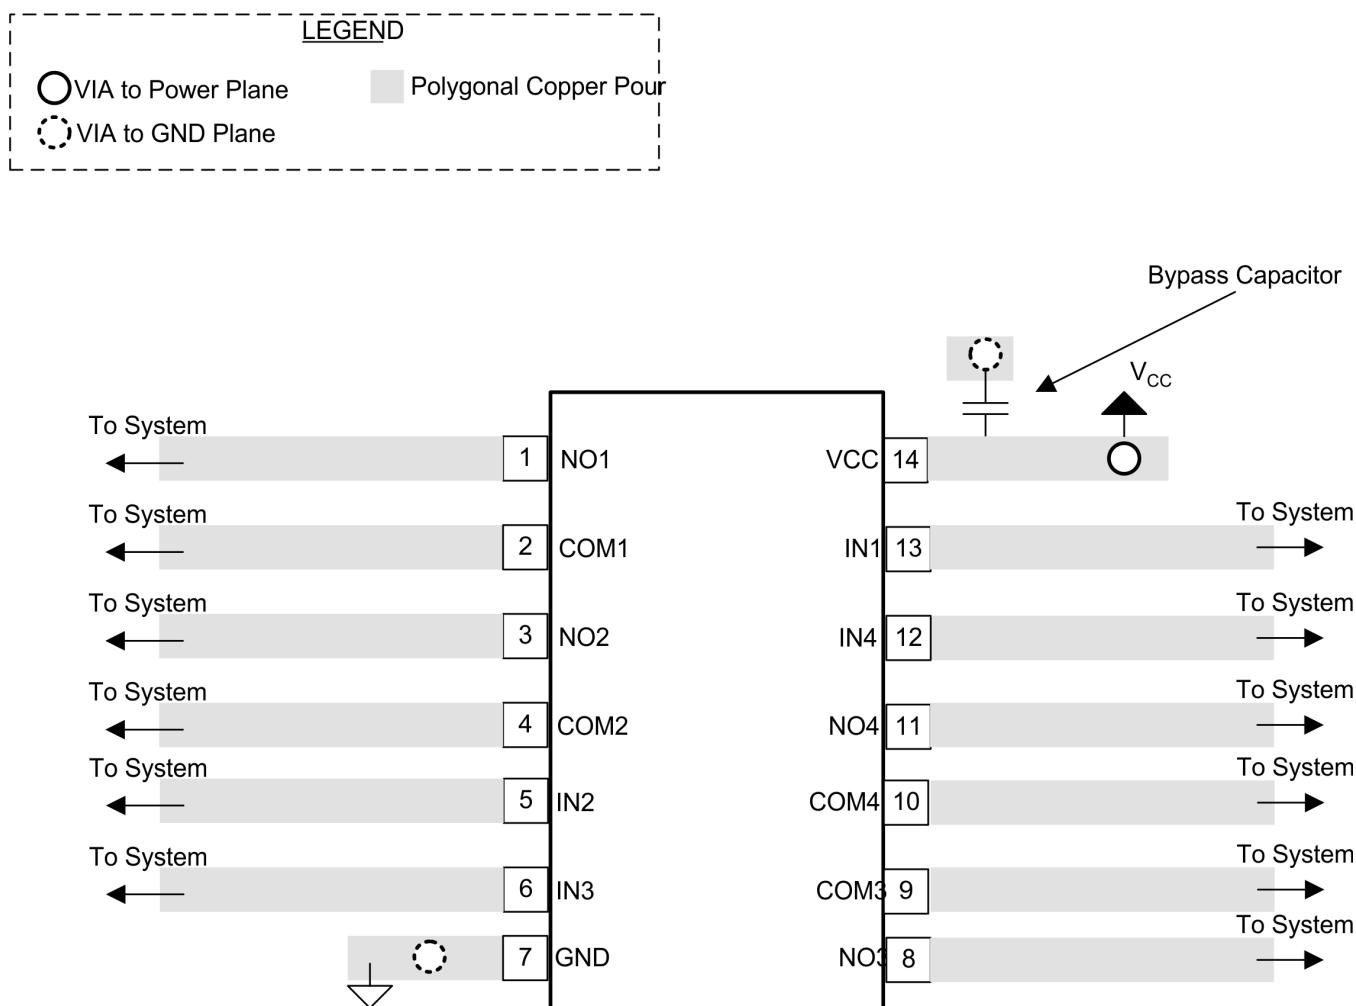

Figure 21. Layout Schematic

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

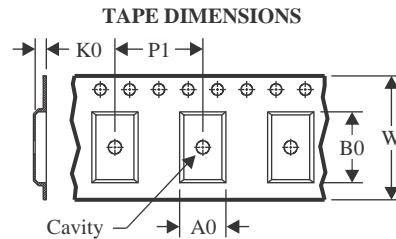

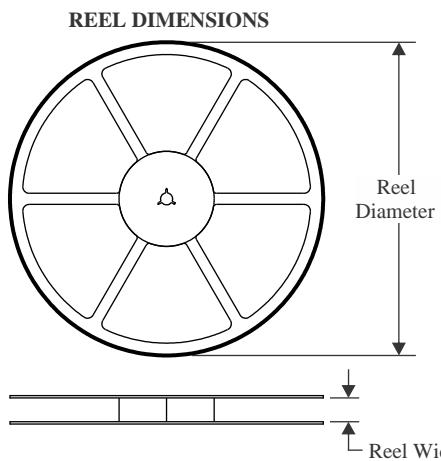

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

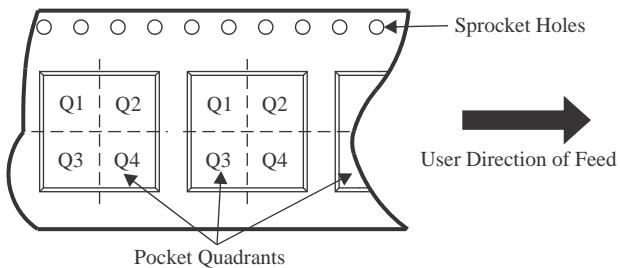

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

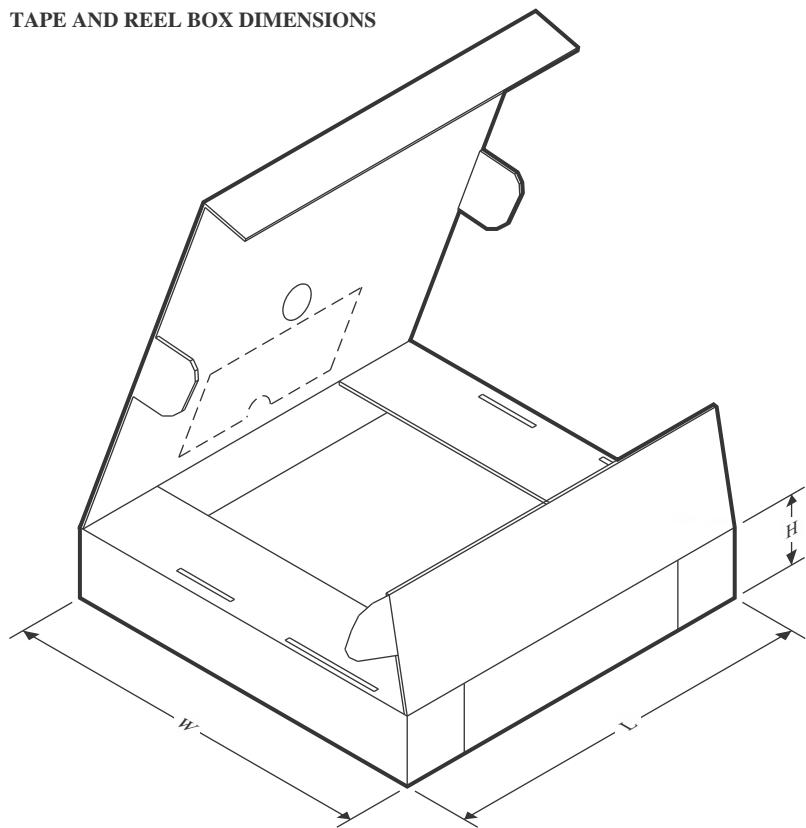

TAPE AND REEL INFORMATION

A0	Dimension designed to accommodate the component width
B0	Dimension designed to accommodate the component length
K0	Dimension designed to accommodate the component thickness
W	Overall width of the carrier tape
P1	Pitch between successive cavity centers

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

*All dimensions are nominal

- NOTES:

 - A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. QFN (Quad Flatpack No-Lead) package configuration.
 - D. The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - E. See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.

 F. Pin 1 identifiers are located on both top and bottom of the package and within the zone indicated.
The Pin 1 identifiers are either a molded, marked, or metal feature.

 - G. Package complies to JEDEC MO-241 variation BA.

THERMAL PAD MECHANICAL DATA

RGY (S-PVQFN-N14)

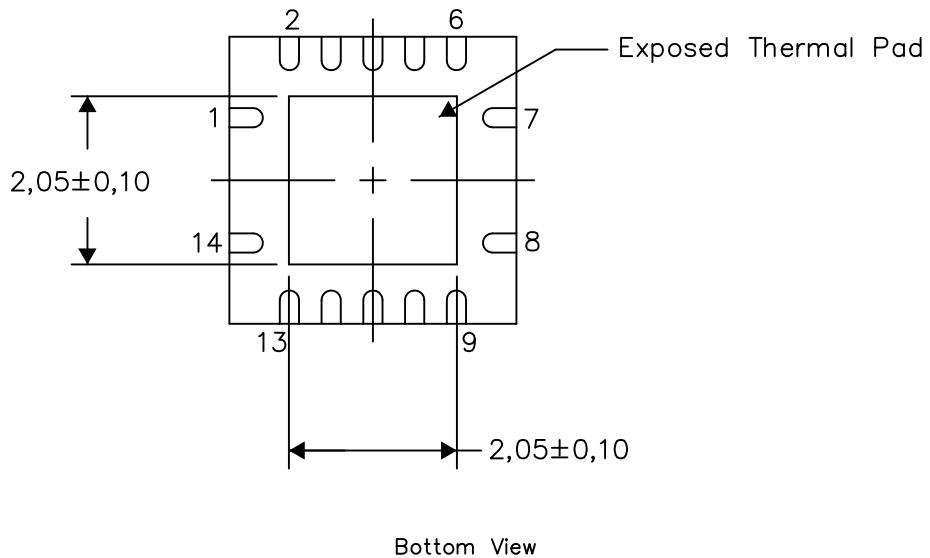

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.

PLASTIC QUAD FLATPACK NO-LEAD

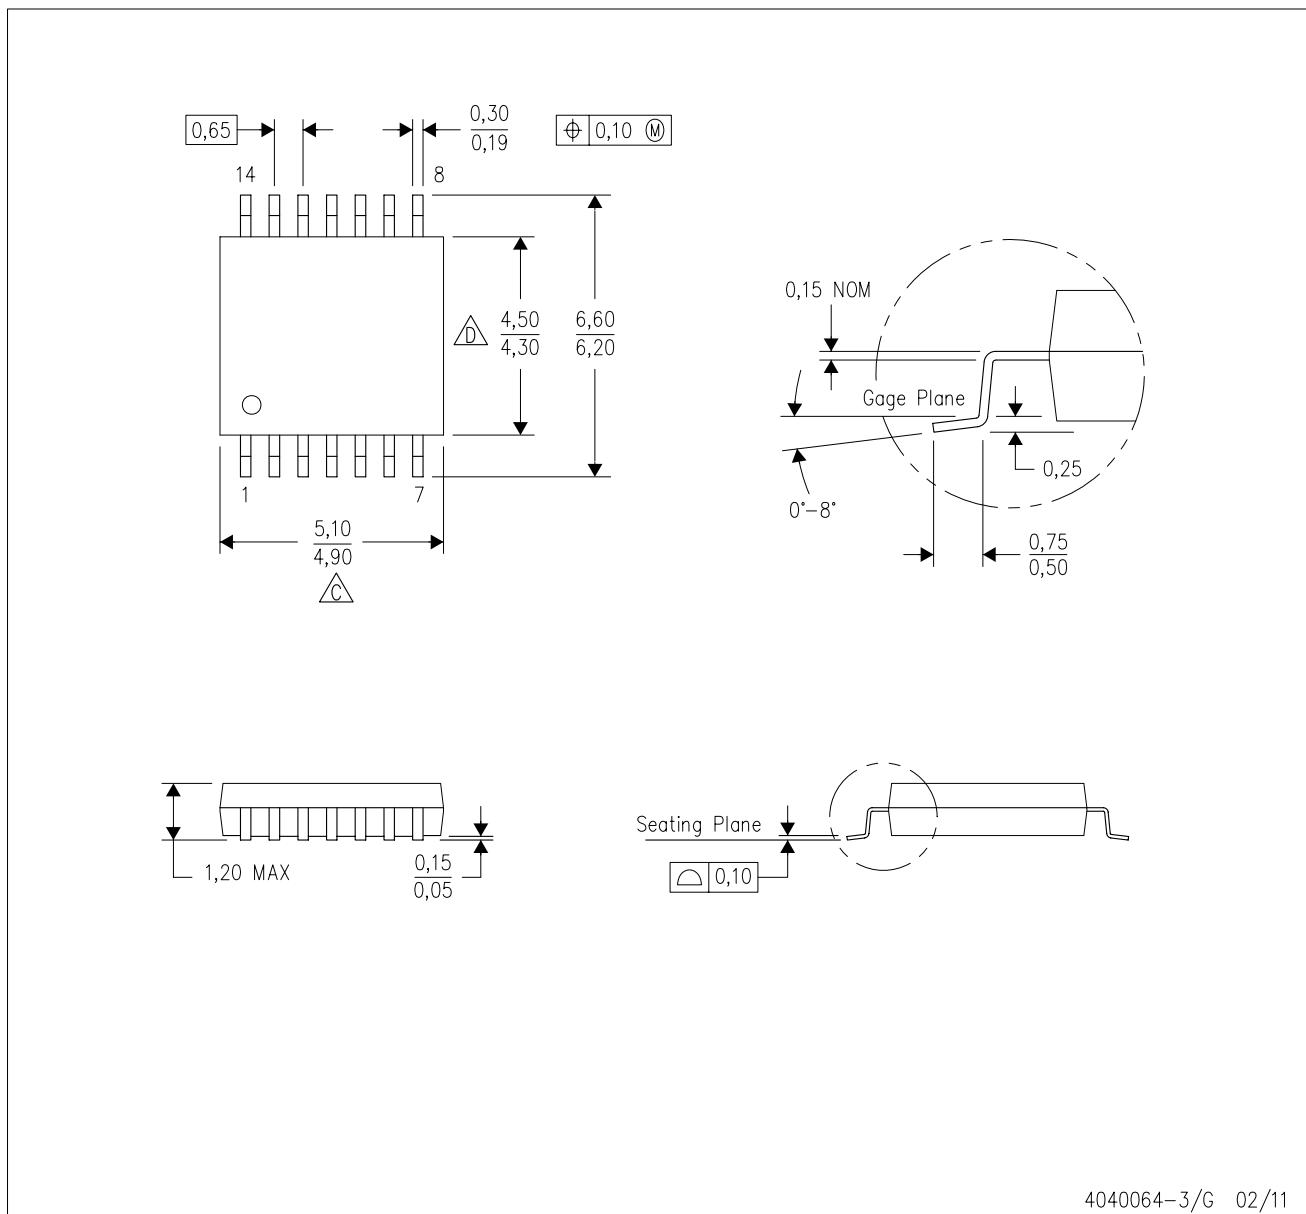

- NOTES:**
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. This package is designed to be soldered to a thermal pad on the board. Refer to Application Note, Quad Flat-Pack QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271, and also the Product Data Sheets for specific thermal information, via requirements, and recommended board layout. These documents are available at www.ti.com <<http://www.ti.com>>.
 - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - F. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
