

## DS32EV100 Programmable Single Equalizer

Check for Samples: [DS32EV100](#)

### FEATURES

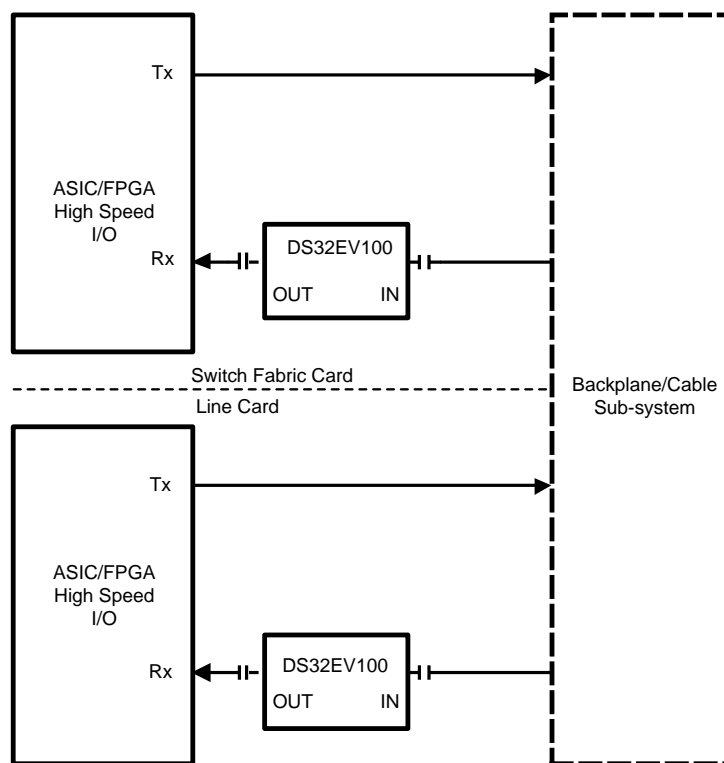

- Equalizes Up to 14 dB loss at 3.2 Gbps
- 8 levels of Programmable Equalization
- Operates up to 3.2 Gbps with 40" FR4 Traces
- 0.12 UI Residual Deterministic Jitter at 3.2 Gbps with 40" FR4 Traces
- Single 2.5V or 3.3V Power Supply
- Supports AC or DC-Coupling with Wide Input Common-Mode
- Low power Consumption: 100 mW Typ at 2.5V
- Small 3 mm x 4 mm 14-pin WSON Package
- > 8 kV HBM ESD Rating
- -40 to 85°C Operating Temperature Range

### DESCRIPTION

The DS32EV100 programmable equalizer provides compensation for transmission medium losses and reduces the medium-induced deterministic jitter for NRZ data channel. The DS32EV100 is optimized for operation up to 3.2 Gbps for both cables and FR4 traces. The equalizer channel has eight levels of input equalization that can be programmed by three control pins.

The equalizer supports both AC and DC-coupled data paths for long run length data patterns such as PRBS-31, and balanced codes such as 8b/10b. The device uses differential current-mode logic (CML) inputs and outputs. The DS32EV100 is available in a 3 mm x 4 mm 14-pin WSON package. Power is supplied from either a 2.5V or 3.3V supply.

### Simplified Application Diagram

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

### PIN DESCRIPTIONS<sup>(1)</sup>

Pin Name	Pin #	I/O, Type	Description
<b>HIGH SPEED DIFFERENTIAL I/O</b>			
IN-	4	I, CML	Inverting and non-inverting CML differential inputs to the equalizer. An on-chip 100Ω terminating resistor is connected between IN+ and IN-. Refer to <a href="#">Figure 5</a> .
IN+	3		
OUT-	11	O, CML	Inverting and non-inverting CML differential outputs from the equalizer. An on-chip 50Ω terminating resistor connects OUT+ to V <sub>DD</sub> and OUT- to V <sub>DD</sub> .
OUT+	12		
<b>EQUALIZATION CONTROL</b>			
BST_2	14	I, LVC MOS	BST_2, BST_1, and BST_0 select the equalizer strength. BST_2 is internally pulled high. BST_1 and BST_0 are internally pulled low.
BST_1	7		
BST_0	8		
<b>POWER</b>			
V <sub>DD</sub>	5	Power	V <sub>DD</sub> = 2.5V ±5% or 3.3V ±10%. V <sub>DD</sub> pins should be tied to V <sub>DD</sub> plane through low inductance path. A 0.01μF bypass capacitor should be connected between each V <sub>DD</sub> pin to GND planes.
GND	2, 6, 9, 10, 13	Power	Ground reference. GND should be tied to a solid ground plane through a low impedance path.
DAP	PAD	Power	Ground reference. The exposed pad at the center of the package must be connected to ground plane of the board.
<b>OTHER</b>			
NC	1		Reserved. Leave no Connect.

(1) I = Input, O = Output

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

**Absolute Maximum Ratings<sup>(1)(2)</sup>**

Supply Voltage ( $V_{DD}$ )	-0.5V to +4.0V
CMOS Input Voltage	-0.5V to +4.0V
CMOS Output Voltage	-0.5V to +4.0V
CML Input/Output Voltage	-0.5V to +4.0V
Junction Temperature	+150°C
Storage Temperature	-65°C to +150°C
Lead Temperature Soldering, 4 sec	+260°C
ESD Rating	
HBM, 1.5 k $\Omega$ , 100 pF	> 8 kV
EIAJ, 0 $\Omega$ , 200 pF	> 250 V
Thermal Resistance, $\theta_{JA}$ , No Airflow	40 °C/W

- (1) "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur, including inoperability and degradation of device reliability and/or performance. Functional operation of the device and/or non-degradation at the Absolute Maximum Ratings or other conditions beyond those indicated in the Recommended Operating Conditions is not implied. The Recommended Operating Conditions indicate conditions at which the device is functional and the device should not be operated beyond such conditions. Absolute Maximum Numbers are guaranteed for a junction temperature range of -40°C to +125°C. Models are validated to Maximum Operating Voltages only.
- (2) If Military/Aerospace specified devices are required, please contact the TI Sales Office/Distributors for availability and specifications.

**Recommended Operating Conditions**

	Min	Typ	Max	Units
Supply Voltage <sup>(1)</sup>				
$V_{DD2.5}$ to GND	2.375	2.5	2.625	V
$V_{DD3.3}$ to GND	3.0	3.3	3.6	V
Ambient Temperature	-40	25	+85	°C

- (1) The  $V_{DD2.5}$  is  $V_{DD} = 2.5V \pm 5\%$  and  $V_{DD3.3}$  is  $V_{DD} = 3.3V \pm 10\%$ .

**Electrical Characteristics**

 Over recommended operating supply and temperature ranges unless otherwise specified.<sup>(1)(2)</sup>

Symbol	Parameter	Conditions	Min	Typ <sup>(1)</sup>	Max	Units
<b>POWER</b>						
P	Power Supply Consumption	$V_{DD2.5}$		100	150	mW
		$V_{DD3.3}$		140	200	mW
N	Supply Noise Tolerance <sup>(3)</sup>	50 Hz – 100 Hz		100		mV <sub>P-P</sub>
		100 Hz – 10 MHz		40		mV <sub>P-P</sub>
		10 MHz – 1.6GHz		10		mV <sub>P-P</sub>
<b>LVTTL DC SPECIFICATIONS</b>						
$V_{IH}$	High Level Input Voltage	$V_{DD2.5}$	1.6		$V_{DD2.5}$	V
		$V_{DD3.3}$	2.0		$V_{DD3.3}$	V
$V_{IL}$	Low Level Input Voltage		-0.3		0.8	V

- (1) Typical values represent most likely parametric norms at  $V_{DD} = 3.3V$  or  $2.5V$ ,  $T_A = 25^\circ\text{C}$ ., and at the Recommended Operation Conditions at the time of product characterization and are not guaranteed.
- (2) The Electrical Characteristics tables list guaranteed specifications under the listed Recommended Operating Conditions except as otherwise modified or specified by the Electrical Characteristics Conditions and/or Notes. Typical specifications are estimations only and are not guaranteed.
- (3) Allowed supply noise (mV<sub>P-P</sub> sine wave) under typical conditions.

## Electrical Characteristics (continued)

t <sub>PLHD</sub>	Differential Low to High Propagation Delay	Propagation delay measurement at 50% V <sub>OD</sub> between input to output, 100 Mbps (Figure 4), (4)		240		ps
t <sub>PHLD</sub>	Differential High to Low Propagation Delay			240		ps
<b>EQUALIZATION</b>						
DJ1	Residual Deterministic Jitter at 3.2 Gbps	40" of 6 mil microstrip FR4, EQ Setting 0x06, PRBS-7 (2 <sup>7</sup> -1) pattern (5)		0.12	0.2	UI <sub>P-P</sub>
DJ2	Residual Deterministic Jitter at 2.5 Gbps	40" of 6 mil microstrip FR4, EQ Setting 0x06, PRBS-7 (2 <sup>7</sup> -1) pattern (5) (6)		0.1	0.16	UI <sub>P-P</sub>

(4) Measured with clock-like {11111 00000} pattern.

(5) Specification is guaranteed by characterization at optimal boost setting and is not tested in production.

(6) Deterministic jitter is measured at the differential outputs (point C of Figure 2), minus the deterministic jitter before the test channel (point A of Figure 2). Random jitter is removed through the use of averaging or similar means.

### Electrical Characteristics (continued)

Over recommended operating supply and temperature ranges unless otherwise specified.<sup>(1)(2)</sup>

Symbol	Parameter	Conditions	Min	Typ <sup>(1)</sup>	Max	Units
DJ3	Residual Deterministic Jitter at 1 Gbps	40" of 6 mil microstrip FR4, EQ Setting 0x06, PRBS-7 (2 <sup>7</sup> -1) pattern (5) (6)		0.05		UI <sub>P-P</sub>
RJ	Random Jitter	(4) (7)		0.5		ps <sub>rms</sub>

(7) Random jitter contributed by the equalizer is defined as  $\sqrt{J_{OUT}^2 - J_{IN}^2}$ .  $J_{OUT}$  is the random jitter at equalizer outputs in ps<sub>rms</sub>, see point C of Figure 2;  $J_{IN}$  is the random jitter at the input of the equalizer in ps<sub>rms</sub>, see Figure 2.

**DS32EV100 FUNCTIONAL DESCRIPTIONS AND APPLICATIONS INFORMATION**

The DS32EV100 is a programmable equalizer optimized for operation up to 3.2 Gbps for backplane and cable applications. The equalizer channel consists of an equalizer stage, a limiting amplifier, a DC offset correction block, and a CML driver as shown in Figure 6.

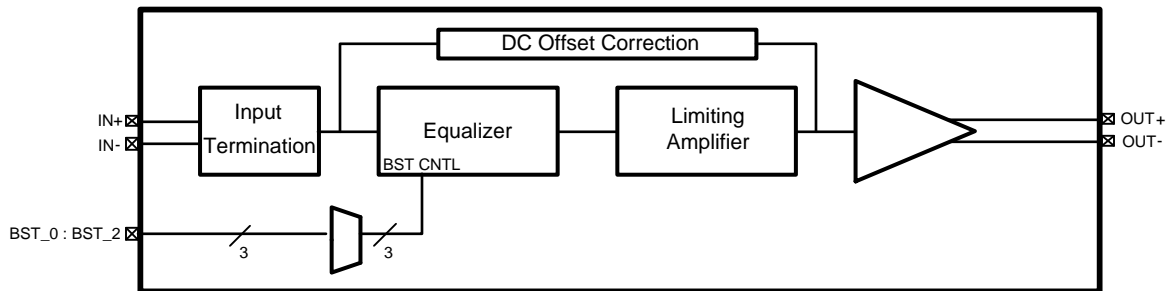

Figure 6. Simplified Block Diagram

**EQUALIZER BOOST CONTROL**

The equalizer channel supports eight programmable levels of equalization boost, and is controlled by the Boost Set pins (BST\_[2:0]) in accordance with Table 1. The eight levels of boost settings enables the DS32EV100 to address a wide range of media loss and data rates.

Table 1. EQ Boost Control Table

6 mil Microstrip FR4 Trace Length (in)	24 AWG Twin-AX Cable Length (m)	Channel Loss 1.6 GHz (dB)	BST_N [2, 1, 0]
0	0	0	0 0 0
5	2	3	0 0 1
10	3	6	0 1 0
15	4	7	0 1 1
20	5	8	1 0 0 (Default)
25	6	10	1 0 1
30	7	12	1 1 0
40	10	14	1 1 1

## GENERAL RECOMMENDATIONS

The DS32EV100 is a high performance circuit capable of delivering excellent performance. Careful attention must be paid to the details associated with high-speed design as well as providing a clean power supply. Refer to the LVDS Owner's Manual for more detailed information on high-speed design tips to address signal integrity design issues.

## PCB LAYOUT CONSIDERATIONS FOR DIFFERENTIAL PAIRS

The CML inputs and outputs must have a controlled differential impedance of 100Ω. It is preferable to route CML lines exclusively on one layer of the board, particularly for the input traces. The use of vias should be avoided if possible. If vias must be used, they should be used sparingly and must be placed symmetrically for each side of a given differential pair. Route the CML signals away from other signals and noise sources on the printed circuit board. See AN-1187 for additional information on WSON packages.

## POWER SUPPLY BYPASSING

Two approaches are recommended to ensure that the DS32EV100 is provided with an adequate power supply. First, the supply ( $V_{DD}$ ) and ground (GND) pins should be connected to power planes routed on adjacent layers of the printed circuit board. The layer thickness of the dielectric should be minimized so that the  $V_{DD}$  and GND planes create a low inductance supply with distributed capacitance. Second, careful attention to supply bypassing through the proper use of bypass capacitors is required. A 0.01μF bypass capacitor should be connected to each  $V_{DD}$  pin such that the capacitor is placed as close as possible to the DS32EV100. Smaller body size capacitors can help facilitate proper component placement. Additionally, three capacitors with capacitance in the range of 2.2 μF to 10 μF should be incorporated in the power supply bypassing design as well. These capacitors can be either tantalum or an ultra-low ESR ceramic and should be placed as close as possible to the DS32EV100.

## DC COUPLING

The DS32EV100 supports both AC coupling with external ac coupling capacitor, and DC coupling to its upstream driver, or downstream receiver. With DC coupling, users must ensure the input signal common mode is within the range of the electrical specification  $V_{ICMDC}$  and the device output is terminated with 50 Ω to  $V_{DD}$ . When power-up and power-down the device, both the DS32EV100 and the downstream receiver should be power-up and power-down together. This is to avoid the internal ESD structures at the output of the DS32EV100 at power-down from being turned on by the downstream receiver.

**PACKAGING INFORMATION**

Orderable part number	Status (1)	Material type (2)	Package   Pins	Package qty   Carrier	RoHS (3)	Lead finish/ Ball material (4)	MSL rating/ Peak reflow (5)	Op temp (°C)	Part marking (6)
<a href="#">DS32EV100SD/NOPB</a>	Active	Production	WSON (NHK)   14	1000   SMALL T&R	Yes	SN	Level-1-260C-UNLIM	-40 to 85	D32E1SD
DS32EV100SD/NOPB.A	Active	Production	WSON (NHK)   14	1000   SMALL T&R	Yes	SN	Level-1-260C-UNLIM	-40 to 85	D32E1SD

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
