

## THVD24xxV-EP 拡張 3V～5.5V RS-485 トランシーバ、1.8V VIO 機能搭載

## 1 特長

- TIA/EIA-485A および TIA/EIA-422B 規格の要件に適合またはそれを上回る性能
- エンハンスド製品
  - 軍事用温度範囲 (-55°C~125°C)
  - 1箇所のウェハー製造拠点と1箇所のアセンブリ/テスト拠点
  - 金ボンドワイヤ、NiPdAu リード仕上げ
  - ウェハー ロットをトレース可能
  - 長期にわたる製品ライフ サイクル
- 電源電圧: 3V~5.5V
- 5V 電源で 2.1V を超える差動出力により PROFIBUS に準拠
- データおよびイネーブル信号用の 1.65V~5.5V 電源
- SLR ピンで選択可能なデータレート:
  - THVD2410V-EP: 250kbps、1Mbps
  - THVD2450V-EP、THVD2452V-EP: 20Mbps、50Mbps
- バス I/O 保護
  - DC  $\pm$ 70V バス フォルト
  - $\pm$ 16kV HBM ESD
  - THVD2410V-EP、THVD2450V-EP
    - $\pm$ 15kV IEC 61000-4-2 接触および気中放電
  - THVD2452V-EP
    - $\pm$ 8kV IEC 61000-4-2 接触および気中放電
  - $\pm$ 4kV IEC 61000-4-4 高速過渡バースト
- 2つの速度グレードに対応する半二重および全二重デバイス
- 対称同相電圧範囲:  $\pm$ 12 V
- レシーバのヒステリシスを大きくすることでノイズ耐性を確保
- 低消費電力
  - 小さいシャットダウン時消費電流: 1 $\mu$ A 未満
  - 動作時電流: 5.3mA 未満
- グリッチなしの電源オン/オフによるホット プラグイン機能
- 開放、短絡、アイドル バスのフェイルセーフ
- サーマル シャットダウン
- 1/8 単位負荷 (最大 256 のバス ノード)
- 基板面積を削減できる小型 3mm x 3mm VSON パッケージ (半二重)、またはドロップイン互換の 14-D パッケージ (全二重)

## 2 アプリケーション

- 航空
- スマート弾薬
- センサ、画像処理、レーダー

- 高耐久性通信

### 3 概要

THVD24xxV-EP は、データおよびイネーブル ロジック信号用の 1.65V～5.5V のロジック電源と 3V～5.5V のバス側電源を使用する、±70V 障害保護機能付き半二重および全二重 RS-422/RS-485 トランシーバです。これらのデバイスはスルーレート選択機能を備えています。このスルーレート選択機能を使うと、**SLR** ピンの設定に基づいて 2 つの最大速度でこれらのデバイスを使うことができます。

IEC ESD 保護機能を内蔵しているため、システムレベルの外部保護部品は不要です。 $\pm 12V$  入力同相範囲により、長いケーブルを使用する場合やグランド ループ電圧が大きい場合でもデータ通信の信頼性を高めることができます。 $250mV$  のレシーバ ヒステリシスを強化することで、高いノイズ除去性能を実現します。また、レシーバのフェイルセーフ機能により、入力が開放または短絡した場合、出力が確実に論理 High に固定されます。

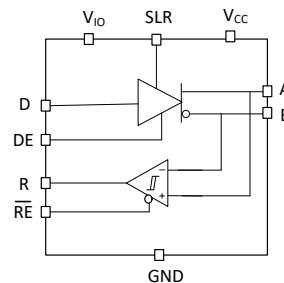

THVD24xxV-EP の半二重デバイスは、スペースに制約がある用途向けに、小型の VSON パッケージで供給されます。これらのデバイスは、標準の 14-SOIC パッケージで供給されています。

## パッケージ情報

部品番号	パッケージ <sup>(1)</sup>	パッケージサイズ <sup>(2)</sup>
THVD2410V-EP	VSON (10)	3mm × 3mm
THVD2450V-EP		
THVD2452V-EP	SOIC (14)	8.65mm × 6mm

(1) 詳細については、[セクション 11](#) を参照してください。

(2) パッケージ サイズ (長さ × 幅) は公称値であり、該当する場合はピンも含まれます。

## THVD2410V-EP および THVD2450V-EP の概略回路図

## 4 Pin Configuration and Functions

**図 4-1. THVD2410V-EP, THVD2450V-EP  
10-Pin DRC Package (VSON)  
(Top View)**

**図 4-2. THVD2452V-EP  
14-Pin D Package (SOIC)  
(Top View)**

**表 4-1. Pin Functions**

NAME	PIN NO.		TYPE	DESCRIPTION
	DRC	D		
V <sub>IO</sub>	1	1	Logic Supply	1.65V to 5.5V supply for logic I/O signals R, RE, D, DE, and SLR)
R	2	2	Digital Output	Receive data output
DE	3	4	Digital Input	Driver enable input; integrated pull-down
RE	4	3	Digital Input	Receiver enable input; integrated pull-up
D	5	5	Digital Input	Transmission data input; integrated pull-up
GND	6	6	Reference Potential	Local device ground
SLR	7	8	Digital Input	Slew rate select ; integrated pull-down. For THVD2410V-EP: Low = 1Mbps, High = 250kbps. Defaults to 1Mbps if SLR is left floating. For THVD2450V-EP and THVD2452V-EP: Low = 50Mbps, High = 20Mbps. Defaults to 50Mbps if left floating.
A	8	12	Bus Input	Bus I/O (half-duplex), bus input (full-duplex)
B	9	11	Bus Input	Bus I/O (half-duplex), bus input (full-duplex)
V <sub>CC</sub>	10	14	Bus Supply	3V to 5.5V supply for the transceiver
Y	-	9	Bus Output	Bus output, Y
Z	-	10	Bus Output	Bus output, Z
NC	-	7, 13		No connect pin. Internally not connected

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) <sup>(1) (2)</sup>

		MIN	MAX	UNIT
Logic supply voltage	$V_{IO}$	-0.5	$V_{CC} + 0.2$	V
Bus supply voltage	$V_{CC}$	-0.5	6.5	V
Bus voltage	Range at any bus pin as differential or common-mode with respect to GND	-70	70	V
Input voltage	Range at any logic pin (D, DE, SLR or RE)	-0.3	$V_{IO} + 0.2$	V
Receiver output current	$I_O$	-24	24	mA
Storage temperature	$T_{stg}$	-65	170	°C

(1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

(2) All voltage values, except differential I/O bus voltages, are with respect to ground terminal.

### 5.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	Bus terminals and GND	±16,000
		All pins except bus terminals and GND	±4,000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1,500	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 5.3 ESD Ratings [IEC]

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge, Half duplex devices THVD2410V/2450V-EP <sup>(1)</sup>	Contact discharge, per IEC 61000-4-2	Bus terminals and GND	±15,000
		Air-gap discharge, per IEC 61000-4-2	Bus terminals and GND	±15,000
$V_{(ESD)}$	Electrostatic discharge, Full duplex devices THVD2452V-EP <sup>(1)</sup>	Contact discharge, per IEC 61000-4-2	Bus terminals and GND	±8,000
		Air-gap discharge, per IEC 61000-4-2	Bus terminals and GND	±8,000
$V_{(EFT)}$	Electrical fast transient	Per IEC 61000-4-4	Bus terminals	±4,000

(1) For optimized IEC ESD performance, it is recommended to have series resistor ( $\geq 50 \Omega$ ) on all logic inputs to minimize transient currents going into or out of the logic pins.

## 5.4 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
$V_{CC}$	Supply voltage		3	5.5		V
$V_{IO}$	I/O supply voltage		1.65		$V_{CC}$	V
$V_I$	Input voltage at any bus terminal (separately or common mode) <sup>(1)</sup>		-12	12		V
$V_{IH}$	High-level input voltage (driver, driver enable, receiver enable and slew rate select inputs)		0.7* $V_{IO}$		$V_{IO}$	V
$V_{IL}$	Low-level input voltage (driver, driver enable, receiver enable and slew rate select inputs)		0	0.3* $V_{IO}$		V
$V_{ID}$	Differential input voltage bus pins		-25	25		V
$I_O$	Output current, driver		-60	60		mA
$I_{OR}$	Output current, receiver	$V_{IO} = 1.8\text{ V or }2.5\text{ V}$	-4	4		mA
$I_{OR}$	Output current, receiver	$V_{IO} = 3.3\text{ V or }5\text{ V}$	-8	8		mA
$R_L$	Differential load resistance		54	60		$\Omega$
$1/t_{UI}$	Signaling rate	THVD2410V, THVD2412V with $SLR = V_{IO}$			250	kbps
		THVD2410V, THVD2412V with $SLR = GND$ or floating			1	Mbps
		THVD2450V, THVD2452V with $SLR = V_{IO}$			20	Mbps
		THVD2450V, THVD2452V with $SLR = GND$ or floating			50	Mbps
$T_A$	Operating ambient temperature		-55	125		$^{\circ}\text{C}$
$T_J$	Junction temperature		-55	150		$^{\circ}\text{C}$

(1) The algebraic convention, in which the least positive (most negative) limit is designated as minimum is used in this data sheet.

## 5.5 Thermal Information

THERMAL METRIC <sup>(1)</sup>		THVD2410V-EP THVD2450V-EP	THVD2452V-EP	UNIT
		DRC (VSON)	D (SOIC)	
		10 PINS	14 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	46.7	87.5	$^{\circ}\text{C}/\text{W}$
$R_{\theta JC(\text{top})}$	Junction-to-case (top) thermal resistance	47.7	41.8	$^{\circ}\text{C}/\text{W}$
$R_{\theta JB}$	Junction-to-board thermal resistance	19.1	43.7	$^{\circ}\text{C}/\text{W}$
$\Psi_{JT}$	Junction-to-top characterization parameter	0.7	8.1	$^{\circ}\text{C}/\text{W}$
$\Psi_{JB}$	Junction-to-board characterization parameter	19.1	43.3	$^{\circ}\text{C}/\text{W}$
$R_{\theta JC(\text{bot})}$	Junction-to-case (bottom) thermal resistance	4.6	N/A	$^{\circ}\text{C}/\text{W}$

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics application report](#).

## 5.6 Power Dissipation

PARAMETER		TEST CONDITIONS			VALUE	UNIT
$P_D$	Driver and receiver enabled, loopback for full duplex devices (A connected to Y, B connected to Z) $V_{CC} = 5.5$ V, $T_A = 125$ °C, square wave at 50% duty cycle	Unterminated $R_L = 300 \Omega$ , $C_L = 50$ pF (driver)	THVD2410V-EP	250 kbps	160	mW
				1Mbps	250	
			THVD2450V-EP	20Mbps	310	
		RS-422 load $R_L = 100 \Omega$ , $C_L = 50$ pF (driver)	THVD2452V-EP	50 Mbps	630	mW
			THVD2410V-EP	250 kbps	170	
				1Mbps	250	
			THVD2450V-EP	20Mbps	290	mW
			THVD2452V-EP	50 Mbps	570	
		RS-485 load $R_L = 54 \Omega$ , $C_L = 50$ pF (driver)	THVD2410V-EP	250 kbps	220	mW
				1Mbps	280	
			THVD2450V-EP	20Mbps	325	
			THVD2452V-EP	50 Mbps	560	

## 5.7 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted). All typical values are at 25°C and supply voltage of  $V_{CC} = 5\text{ V}$ ,  $V_{IO} = 3.3\text{ V}$ , unless otherwise noted. (1)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT		
<b>Driver</b>								
$V_{ODI}$	Driver differential output voltage magnitude	$R_L = 60\text{ }\Omega$ , $-25\text{ V} \leq V_{test} \leq 25\text{ V}$ (See <a href="#">图 6-1</a> )	1.5	3.3		V		
		$R_L = 60\text{ }\Omega$ , $-25\text{ V} \leq V_{test} \leq 25\text{ V}$ , $4.5\text{ V} \leq V_{CC} \leq 5.5\text{ V}$ (See <a href="#">图 6-1</a> )	2.1	3.3		V		
		$R_L = 100\text{ }\Omega$ (See <a href="#">图 6-2</a> )	2	4		V		
		$R_L = 54\text{ }\Omega$ (See <a href="#">图 6-2</a> )	1.5	3.5		V		
$\Delta V_{ODI} $	Change in differential output voltage	$R_L = 54\text{ }\Omega$ or $100\text{ }\Omega$ (See <a href="#">图 6-2</a> )	-50	50		mV		
$V_{OC}$	Common-mode output voltage	$R_L = 54\text{ }\Omega$ or $100\text{ }\Omega$ (See <a href="#">图 6-2</a> )	1	$V_{CC}/2$	3	V		
$\Delta V_{OC(ss)}$	Change in steady-state common-mode output voltage	$R_L = 54\text{ }\Omega$ or $100\text{ }\Omega$ (See <a href="#">图 6-2</a> )	-50	50		mV		
$I_{os}$	Short-circuit output current	DE = $V_{IO}$ , $-70\text{ V} \leq (V_A \text{ or } V_B) \leq 70\text{ V}$ , or A shorted to B (A,B are driver terminals for half duplex, Y/Z are for full duplex)	-250	250		mA		
<b>Receiver</b>								
$I_I$	Bus input current	DE = 0 V, $V_{CC}$ and $V_{IO} = 0\text{ V}$ or $5.5\text{ V}$	$V_I = 12\text{ V}$	90	125	$\mu\text{A}$		
			$V_I = 25\text{ V}$	200	250	$\mu\text{A}$		
			$V_I = -7\text{ V}$	-100	-80	$\mu\text{A}$		
			$V_I = -25\text{ V}$	-350	-220	$\mu\text{A}$		
$V_{TH+}$	Positive-going input threshold voltage (2)	Over common-mode range of $\pm 12\text{ V}$			40	125	200	mV
$V_{TH-}$	Negative-going input threshold voltage (2)				-200	-125	-40	mV
$V_{HYS}$	Input hysteresis				250			mV
$V_{TH\_FSH}$	Input fail-safe threshold				-40	40		mV
$C_{A,B}$	Input differential capacitance	Measured between A and B, $f = 1\text{ MHz}$		50			pF	
$V_{OH}$	Output high voltage	$I_{OH} = -8\text{ mA}$ , $V_{IO} = 3$ to $3.6\text{ V}$ or $4.5\text{ V}$ to $5.5\text{ V}$		$V_{IO} - 0.4$	$V_{IO} - 0.2$		V	
$V_{OL}$	Output low voltage	$I_{OL} = 8\text{ mA}$ , $V_{IO} = 3$ to $3.6\text{ V}$ or $4.5\text{ V}$ to $5.5\text{ V}$		0.2	0.4		V	
$V_{OH}$	Output high voltage	$I_{OH} = -4\text{ mA}$ , $V_{IO} = 1.65$ to $1.95\text{ V}$ or $2.25\text{ V}$ to $2.75\text{ V}$		$V_{IO} - 0.4$	$V_{IO} - 0.2$		V	
$V_{OL}$	Output low voltage	$I_{OL} = 4\text{ mA}$ , $V_{IO} = 1.65$ to $1.95\text{ V}$ or $2.25\text{ V}$ to $2.75\text{ V}$		0.2	0.4		V	
$I_{OZ}$	Output high-impedance current, R pin	$V_O = 0\text{ V}$ or $V_{IO}$ , $RE = V_{IO}$		-1	1		$\mu\text{A}$	
<b>Logic</b>								
$I_{IN}$	Input current (DE, SLR)	$1.65\text{ V} \leq V_{IO} \leq 5.5\text{ V}$ , $0\text{ V} \leq V_{IN} \leq V_{IO}$			5		$\mu\text{A}$	
$I_{IN}$	Input current (D, $\bar{RE}$ )	$1.65\text{ V} \leq V_{IO} \leq 5.5\text{ V}$ , $0\text{ V} \leq V_{IN} \leq V_{IO}$		-5			$\mu\text{A}$	
<b>Thermal Protection</b>								
$T_{SHDN}$	Thermal shutdown threshold	Temperature rising		150	180		°C	
$T_{HYS}$	Thermal shutdown hysteresis			10			°C	
<b>Supply</b>								
$UV_{VCC}$ (rising)	Rising under-voltage threshold on $V_{CC}$			2.3	2.6		V	
$UV_{VCC}$ (falling)	Falling under-voltage threshold on $V_{CC}$			1.95	2.2		V	
$UV_{VCC(hys)}$	Hysteresis on under-voltage of $V_{CC}$			150			mV	
$UV_{VIO}$ (rising)	Rising under-voltage threshold on $V_{IO}$			1.4	1.6		V	
$UV_{VIO}$ (falling)	Falling under-voltage threshold on $V_{IO}$			1.2	1.3		V	

## 5.7 Electrical Characteristics (続き)

over operating free-air temperature range (unless otherwise noted). All typical values are at 25°C and supply voltage of  $V_{CC} = 5\text{ V}$ ,  $V_{IO} = 3.3\text{ V}$ , unless otherwise noted. (1)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
UV <sub>VIO(hys)</sub>	Hysteresis on under-voltage of $V_{IO}$			30		mV
I <sub>CC</sub>	Supply current (quiescent), $V_{CC} = 4.5\text{ V}$ to $5.5\text{ V}$	Driver and receiver enabled	RE = 0 V, DE = $V_{IO}$ , No load	3.5	5.3	mA
		Driver enabled, receiver disabled	RE = $V_{IO}$ , DE = $V_{IO}$ , No load	2.5	4.2	mA
		Driver disabled, receiver enabled	RE = 0 V, DE = 0 V, No load	1.8	2.4	mA
		Driver and receiver disabled	RE = $V_{IO}$ , DE = 0 V, D = open, No load	0.1	1.2	μA
I <sub>CC</sub>	Supply current (quiescent), $V_{CC} = 3\text{ V}$ to $3.6\text{ V}$	Driver and receiver enabled	RE = 0 V, DE = $V_{IO}$ , No load	3	4.1	mA
		Driver enabled, receiver disabled	RE = $V_{IO}$ , DE = $V_{IO}$ , No load	2	3	mA
		Driver disabled, receiver enabled	RE = 0 V, DE = 0 V, No load	1.6	2.2	mA
		Driver and receiver disabled	RE = $V_{IO}$ , DE = 0 V, D = open, No load	0.1	1	μA
I <sub>IO</sub>	Logic supply current (quiescent), $V_{IO} = 3$ to $3.6\text{ V}$	Driver disabled, Receiver enabled, SLR = GND	DE = 0 V, RE = 0 V, No load	4.5	8.4	μA
		Driver disabled, Receiver enabled, SLR = $V_{IO}$	DE = 0 V, RE = 0 V, No load	3.3	8.4	μA
		Driver disabled, Receiver disabled, SLR = GND	DE = 0 V, RE = $V_{IO}$ , No load	0.1	1	μA
		Driver disabled, Receiver disabled, SLR = $V_{IO}$	DE = 0 V, RE = $V_{IO}$ , No load	1.8	4	μA

(1) A, B are driver output and receiver input terminals for Half duplex devices; A/B are Receiver input, Y/Z are driver output terminals for Full duplex devices  
 (2) Under any specific conditions,  $V_{TH+}$  is assured to be at least  $V_{HYS}$  higher than  $V_{TH-}$ .

## 5.8 Switching Characteristics - 250 kbps

250-kbps (THVD2410V-EP with  $SLR = V_{IO}$ ) over recommended operating conditions. All typical values are at 25°C and supply voltage of  $V_{CC} = 5$  V,  $V_{IO} = 3.3$  V, unless otherwise noted. <sup>(1)</sup>

PARAMETER		TEST CONDITIONS		MIN	TYP	MAX	UNIT	
<b>Driver</b>								
$t_r, t_f$	Differential output rise/fall time	$V_{CC} = 3$ to 3.6 V, Typical at 3.3V	$R_L = 54 \Omega, C_L = 50 \text{ pF}$ See <a href="#">図 6-3</a>	450	560	1200	ns	
		$V_{CC} = 4.5$ to 5.5 V, Typical at 5 V		500	625	1200	ns

## 7 Detailed Description

### 7.1 Overview

THVD2410V-EP and THVD2450V-EP are fault-protected, half duplex RS-485 transceivers available in two speed grades suitable for data transmission up to 1Mbps and 50Mbps respectively. THVD2452V-EP is a full-duplex transceiver that can be configured for two speeds using the SLR pin: 20Mbps and 50Mbps. The devices have active-high driver enables and active-low receiver enables. A shutdown current of less than 1 $\mu$ A can be achieved by disabling both driver and receiver.

### 7.2 Functional Block Diagrams

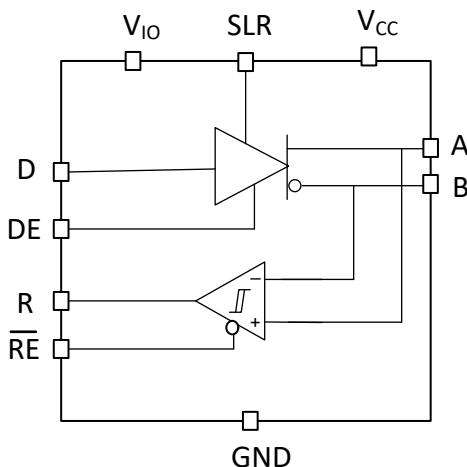

図 7-1. THVD2410V-EP and THVD2450V-EP Block Diagram

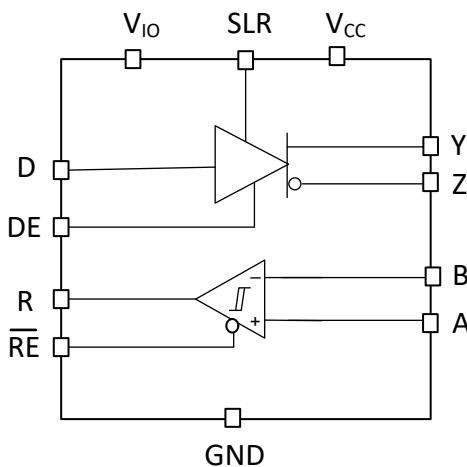

図 7-2. THVD2452V-EP Block Diagram

### 7.3 Feature Description

#### 7.3.1 $\pm 70$ -V Fault Protection

THVD24xxV-EP transceivers have extended bus fault protection compared to standard RS-485 devices. Transceivers that operate in rugged industrial environments are often exposed to voltage transients greater than the -7V to +12V defined by the TIA/EIA-485A standard. To protect against such conditions, the generic RS-485 devices with lower absolute maximum ratings require expensive external protection components. To simplify system design and reduce overall system cost, THVD24xxV-EP devices are protected up to  $\pm 70$ V without the need for any external components.

### 7.3.2 Integrated IEC ESD and EFT Protection

Internal ESD protection circuits protect the transceivers against electrostatic discharges (ESD) according to IEC 61000-4-2 of up to  $\pm 12\text{kV}$  and against electrical fast transients (EFT) according to IEC 61000-4-4 of up to  $\pm 4\text{kV}$ . THVD24xxV-EP ESD structures help to limit voltage excursions and recover from them quickly that they allow EFT Criterion A at the system level (no data loss when transient noise is present).

### 7.3.3 Driver Overvoltage and Overcurrent Protection

The THVD24xxV-EP drivers are protected against any DC supply shorts in the range of -70V to +70V. The devices internally limit the short circuit current to  $\pm 250\text{mA}$  to comply with the TIA/EIA-485A standard. In addition, a fold-back current limiting circuit further reduces the driver short circuit current to less than  $\pm 5\text{mA}$  if the output fault voltage exceeds  $|\pm 25\text{V}|$ .

All devices feature thermal shutdown protection that disables the driver and the receiver if the junction temperature exceeds the  $T_{SHDN}$  threshold due to excessive power dissipation.

### 7.3.4 Enhanced Receiver Noise Immunity

The differential receivers of THVD24xxV-EP feature fully symmetric thresholds to maintain duty cycle of the signal even with small input amplitudes. In addition, 250mV (typical) hysteresis provides noise immunity.

### 7.3.5 Receiver Fail-Safe Operation

The receivers are fail-safe to invalid bus states caused by the following:

- Open bus conditions, such as a disconnected connector
- Shorted bus conditions, such as cable damage shorting the twisted-pair together
- Idle bus conditions that occur when no driver on the bus is actively driving

In any of these cases, the receiver outputs a fail-safe logic high state if the input amplitude stays for longer than  $t_{D(OFS)}$  at less than  $|V_{TH\_FSH}|$ .

### 7.3.6 Low-Power Shutdown Mode

Driving DE low and  $\overline{RE}$  high for longer than 500ns puts the devices into the shutdown mode. If either DE goes high or  $\overline{RE}$  goes low, the counters reset. The devices does not enter the shutdown mode if the enable pins are in disable state for less than 50ns. This feature prevents the devices from accidentally going into shutdown mode due to skew between DE and  $\overline{RE}$ .

## 7.4 Device Functional Modes

When the driver enable pin, DE, is logic high, the differential outputs A and B follow the logic states at data input D. A logic high at D causes A to turn high and B to turn low. In this case the differential output voltage defined as  $V_{OD} = V_A - V_B$  is positive. When D is low, the output states reverse: B turns high, A becomes low, and  $V_{OD}$  is negative.

When DE is low, both outputs turn high-impedance. In this condition the logic state at D is irrelevant. The DE pin has an internal pull-down resistor to ground, thus when left open the driver is disabled (high-impedance) by default. The D pin has an internal pull-up resistor to  $V_{CC}$ , thus, when left open while the driver is enabled, output A turns high and B turns low.

**表 7-1. Driver Function Table**

INPUT	ENABLE	OUTPUTS		FUNCTION
		A/Y	B/Z	
H	H	H	L	Actively drive bus high
L	H	L	H	Actively drive bus low
X	L	Z	Z	Driver disabled
X	OPEN	Z	Z	Driver disabled by default
OPEN	H	H	L	Actively drive bus high by default

When the receiver enable pin,  $\overline{RE}$ , is logic low, the receiver is enabled. When the differential input voltage defined as  $V_{ID} = V_A - V_B$  is higher than the positive input threshold,  $V_{TH+}$ , the receiver output, R, turns high. When  $V_{ID}$  is lower than the negative input threshold,  $V_{TH-}$ , the receiver output, R, turns low. If  $V_{ID}$  is between  $V_{TH+}$  and  $V_{TH-}$  the output is indeterminate.

When  $\overline{RE}$  is logic high or left open, the receiver output is high-impedance and the magnitude and polarity of  $V_{ID}$  are irrelevant. Internal biasing of the receiver inputs causes the output to go failsafe-high when the transceiver is disconnected from the bus (open-circuit), the bus lines are shorted to one another (short-circuit), or the bus is not actively driven (idle bus).

**表 7-2. Receiver Function Table**

DIFFERENTIAL INPUT	ENABLE	OUTPUT	FUNCTION
$V_{ID} = V_A - V_B$	$\overline{RE}$	R	
$V_{TH+} < V_{ID}$	L	H	Receive valid bus high
$V_{TH-} < V_{ID} < V_{TH+}$	L	?	Indeterminate bus state
$V_{ID} < V_{TH-}$	L	L	Receive valid bus low
X	H	Z	Receiver disabled
X	OPEN	Z	Receiver disabled by default
Open-circuit bus	L	H	Fail-safe high output
Short-circuit bus	L	H	Fail-safe high output
Idle (terminated) bus	L	H	Fail-safe high output

表 7-3 shows SLR (slew rate select) pin functionality. SLR has integrated pull-down, so the device remains in higher speed mode until SLR is pulled high which limits the slew rate and puts the device in slower speed mode.

表 7-3. SLR pin control

Device	Functionality w.r.t SLR pin
THVD2410V-EP	SLR = Low or floating: Both transmitter (TX) and receiver (RX) maximum speed is 1Mbps SLR = High: Both TX and RX maximum speed is limited to 250kbps
THVD2450V-EP, THVD2452V-EP	SLR = Low or floating: Both transmitter (TX) and receiver (RX) maximum speed is 50Mbps SLR = High: Both TX and RX maximum speed is limited to 20Mbps

表 7-4 shows the device behavior in undervoltage scenarios:

表 7-4. Supply Function Table

Supply Function Table	$V_{IO}$	Driver Output	Receiver Output
$> UV_{VCC(rising)}$	$> UV_{VIO(rising)}$	Determined by DE and D inputs	Determined by $\bar{RE}$ and A-B
$< UV_{VCC(falling)}$	$> UV_{VIO(rising)}$	High impedance	High impedance
$> UV_{VCC(rising)}$	$< UV_{VIO(falling)}$	High impedance	High impedance
$< UV_{VCC(falling)}$	$< UV_{VIO(falling)}$	High impedance	High impedance

## 8 Application and Implementation

### 注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

THVD2410 and THVD2450 are fault-protected, half-duplex RS-485 transceivers commonly used for asynchronous data transmissions. For these devices, the driver and receiver enable pins allow for the configuration of different operating modes.

### 8.2 Typical Application

An RS-485 bus consists of multiple transceivers connecting in parallel to a bus cable. To eliminate line reflections, each cable end is terminated with a termination resistor,  $R_T$ , whose value matches the characteristic impedance,  $Z_0$ , of the cable. This method, known as parallel termination, generally allows for higher data rates over longer cable length.

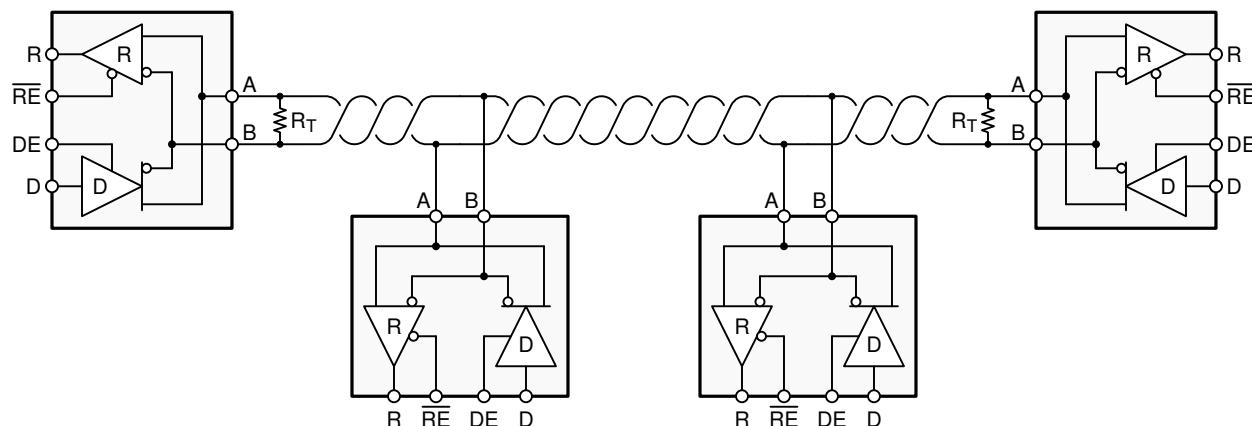

図 8-1. Typical RS-485 Network With Half-Duplex Transceivers

#### 8.2.1 Design Requirements

RS-485 is a robust electrical standard suitable for long-distance networking that may be used in a wide range of applications with varying requirements, such as distance, data rate, and number of nodes.

##### 8.2.1.1 Data Rate and Bus Length

There is an inverse relationship between data rate and cable length, which means the higher the data rate, the shorter the cable length; and conversely, the lower the data rate, the longer the cable length. While most RS-485 systems use data rates between 10kbps and 100kbps, some applications require data rates up to 250kbps at distances of 4000 feet and longer. Longer distances are possible by allowing for small signal jitter of up to 5 or 10%.

図 8-2. Cable Length vs Data Rate Characteristic

Even higher data rates are achievable (that is, 50Mbps for the THVD2450) in cases where the interconnect is short enough (or has suitably low attenuation at signal frequencies) to not degrade the data.

#### 8.2.1.2 Stub Length

When connecting a node to the bus, the distance between the transceiver inputs and the cable trunk, known as the stub, should be as short as possible. Stubs present a non-terminated piece of bus line which can introduce reflections of varying phase as the length of the stub increases. As a general guideline, the electrical length, or round-trip delay, of a stub should be less than one-tenth of the rise time of the driver, thus giving a maximum physical stub length as shown in 式 1.

$$L_{(STUB)} \leq 0.1 \times t_r \times v \times c \quad (1)$$

where

- $t_r$  is the 10/90 rise time of the driver
- $c$  is the speed of light ( $3 \times 10^8$  m/s)
- $v$  is the signal velocity of the cable or trace as a factor of  $c$

#### 8.2.1.3 Bus Loading

The RS-485 standard specifies that a compliant driver must be able to drive 32 unit loads (UL), where 1 unit load represents a load impedance of approximately  $12\text{k}\Omega$ . Because the THVD24xxV-EP devices consist of 1/8 UL transceivers, connecting up to 256 receivers to the bus is possible.

#### 8.2.1.4 Transient Protection

The bus pins of the THVD24xxV-EP transceivers include on-chip ESD protection against  $\pm 30\text{kV}$  HBM and  $\pm 12\text{kV}$  IEC 61000-4-2 contact discharge. The International Electrotechnical Commission (IEC) ESD test is far more severe than the HBM ESD test. The 50% higher charge capacitance,  $C_{(S)}$ , and 78% lower discharge resistance,  $R_{(D)}$ , of the IEC model produce significantly higher discharge currents than the HBM model. As stated in the IEC 61000-4-2 standard, contact discharge is the preferred transient protection test method.

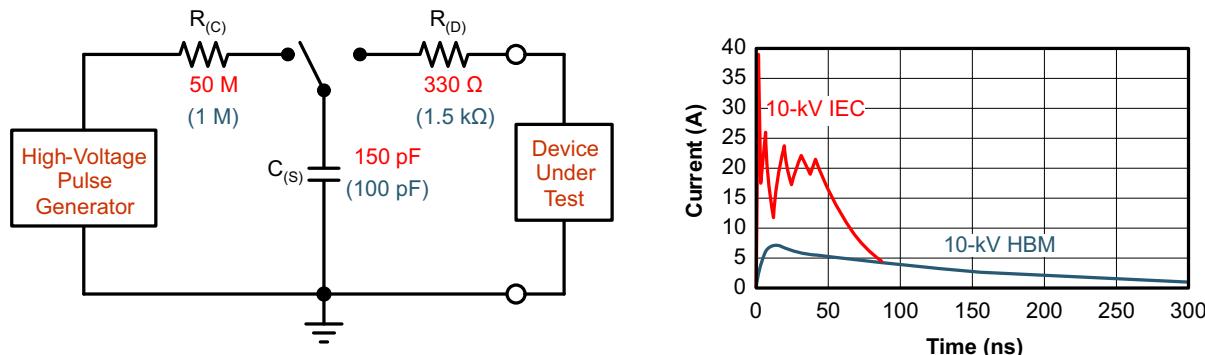

図 8-3. HBM and IEC ESD Models and Currents in Comparison (HBM Values in Parenthesis)

The on-chip implementation of IEC ESD protection significantly increases the robustness of equipment. Common discharge events occur because of human contact with connectors and cables. Designers may choose to implement protection against longer duration transients, typically referred to as surge transients.

EFTs are generally caused by relay-contact bounce or the interruption of inductive loads. Surge transients often result from lightning strikes (direct strike or an indirect strike which induce voltages and currents), or the switching of power systems, including load changes and short circuit switching. These transients are often encountered in industrial environments, such as factory automation and power-grid systems.

図 8-4 compares the pulse-power of the EFT and surge transients with the power caused by an IEC ESD transient. The left side diagram shows the relative pulse-power for a 0.5kV surge transient and 4kV EFT transient, both of which dwarf the 10kV ESD transient visible in the lower-left corner. 500V surge transients are representative of events that may occur in factory environments in industrial and process automation.

The right side diagram shows the pulse power of a 6kV surge transient, relative to the same 0.5kV surge transient. 6kV surge transients are most likely to occur in power generation and power-grid systems.

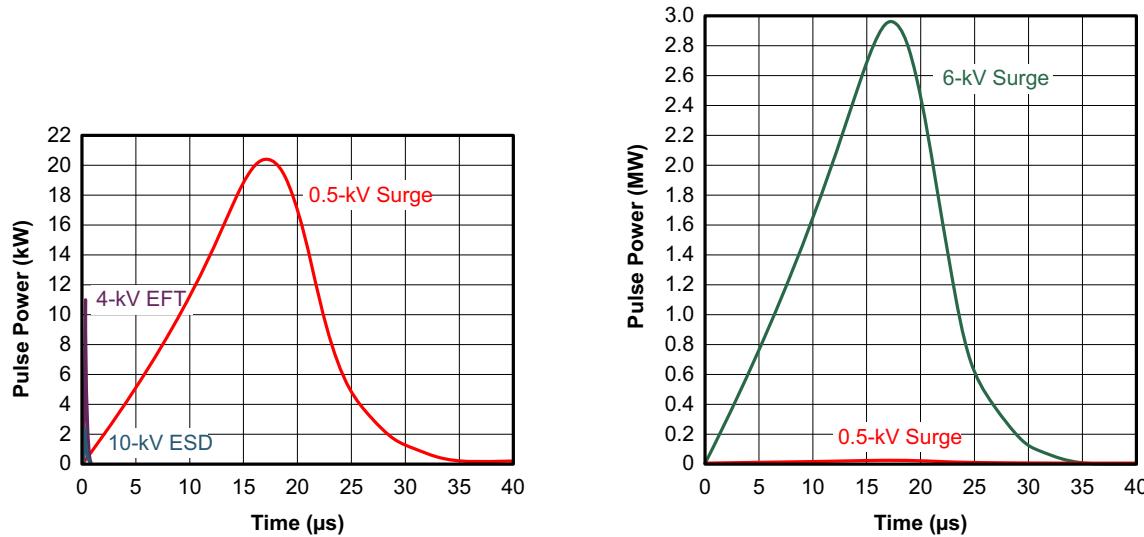

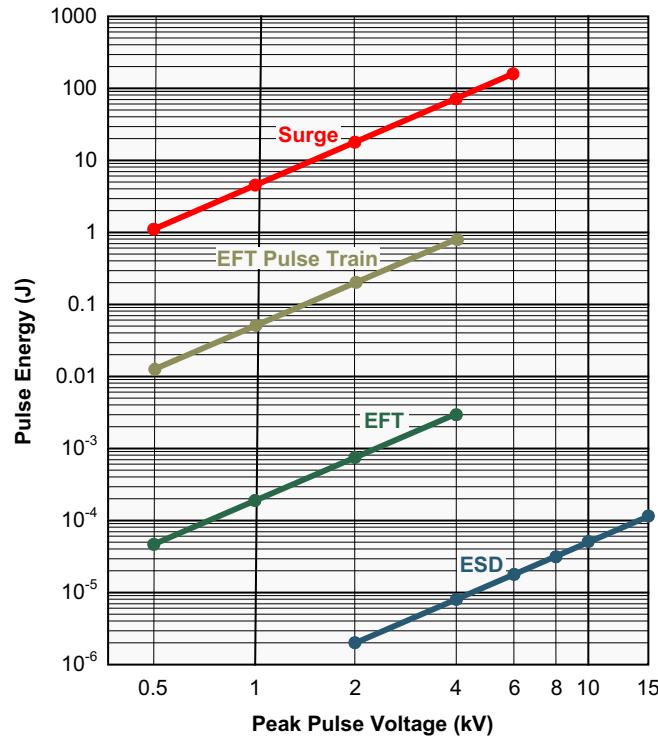

図 8-4. Power Comparison of ESD, EFT, and Surge Transients

For surge transients, high-energy content is characterized by long pulse duration and slow decaying pulse power. The electrical energy of a transient that is dumped into the internal protection cells of a transceiver is converted into thermal energy, which heats and destroys the protection cells, thus destroying the transceiver. [图 8-5](#) shows the large differences in transient energies for single ESD, EFT, surge transients, and an EFT pulse train that is commonly applied during compliance testing.

**图 8-5. Comparison of Transient Energies**

### 8.2.2 Detailed Design Procedure

图 8-6 suggests a protection circuit against 1kV surge (IEC 61000-4-5) transients. 表 8-1 shows the associated bill of materials. SMAJ30CA TVS diodes are rated to operate up to 30V. This makes sure the protection diodes do not conduct if a direct RS-485 bus shorts to 24V DC industrial power rail.

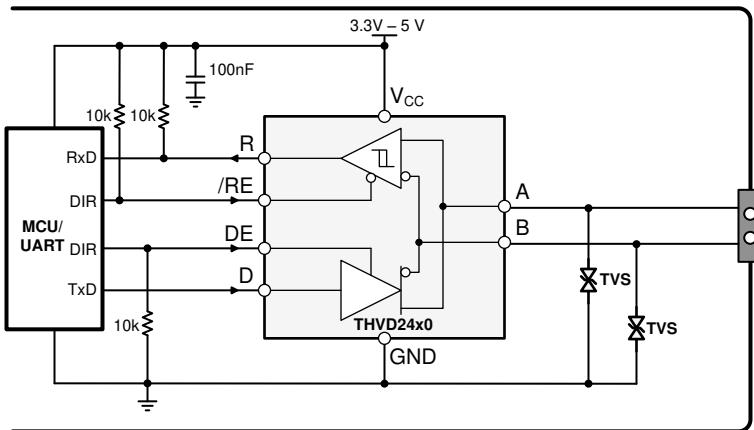

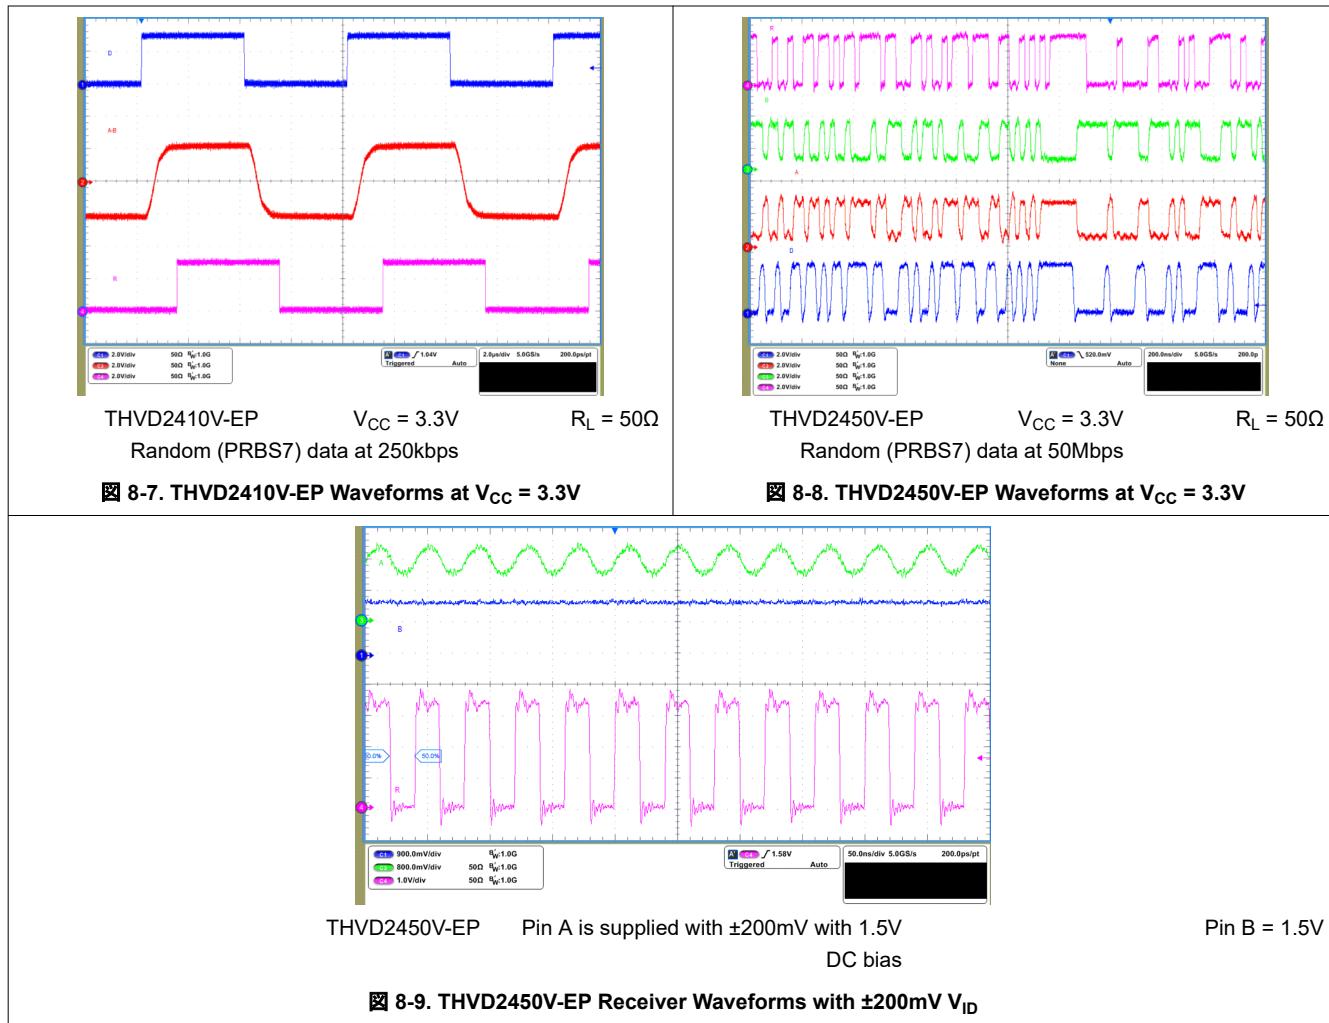

图 8-6. Transient Protection Against Surge Transients for Half-Duplex Devices

表 8-1. Components List

DEVICE	FUNCTION	ORDER NUMBER	MANUFACTURER <sup>(1)</sup>
XCVR	RS-485 transceiver	THVD2410V-EP Or THVD2450V-EP	TI
TVS	Bidirectional 400-W transient suppressor	SMAJ30CA	Littelfuse

(1) See [Third-Party Products Disclaimer](#)

### 8.2.3 Application Curves

### 8.3 Power Supply Recommendations

For reliable operation at all data rates and supply voltages, each supply should be decoupled with a 100nF ceramic capacitor located as close to the supply pins as possible. This helps to reduce supply voltage ripple present on the outputs of switched-mode power supplies and also helps to compensate for the resistance and inductance of the PCB power planes.

## 8.4 Layout

### 8.4.1 Layout Guidelines

Robust and reliable bus node design often requires the use of external transient protection devices to protect against surge transients that may occur in industrial environments. Since these transients have a wide frequency bandwidth (from approximately 3MHz to 300MHz), high-frequency layout techniques should be applied during PCB design.

1. Place the protection circuitry close to the bus connector to prevent noise transients from propagating across the board.
2. Use  $V_{CC}$  and ground planes to provide low inductance. Note that high-frequency currents tend to follow the path of least impedance and not the path of least resistance.
3. Design the protection components into the direction of the signal path. Do not force the transient currents to divert from the signal path to reach the protection device.
4. Apply 100nF to 220nF decoupling capacitors as close as possible to the  $V_{CC}$  and  $V_{IO}$  pins of transceiver, UART and/or controller ICs on the board.
5. Use at least two vias for the ground connections of the decoupling capacitors at the power pins and the protection devices to minimize the effective via inductance.
6. Use 1k $\Omega$  to 10k $\Omega$  pull-up and pull-down resistors for enable lines to limit noise currents in these lines during transient events.
7. Insert pulse-proof resistors into the A and B bus lines if the TVS clamping voltage is higher than the specified maximum voltage of the transceiver bus pins. These resistors limit the residual clamping current into the transceiver and prevent it from latching up.

### 8.4.2 Layout Example

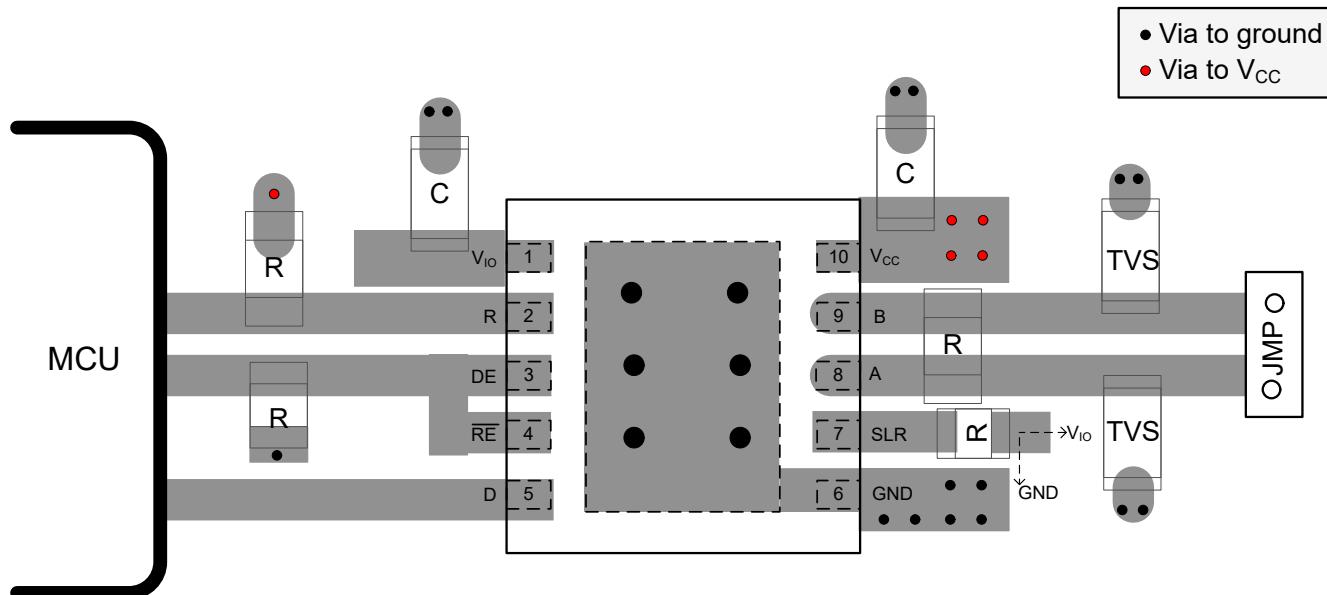

図 8-10. THVD2410V-EP, THVD2450V-EP (Half-Duplex) Layout Example

## 9 Device and Documentation Support

### 9.1 Device Support

#### 9.1.1 サード・パーティ製品に関する免責事項

サード・パーティ製品またはサービスに関するテキサス・インスツルメンツの出版物は、単独またはテキサス・インスツルメンツの製品、サービスと一緒に提供される場合に関係なく、サード・パーティ製品またはサービスの適合性に関する是認、サード・パーティ製品またはサービスの是認の表明を意味するものではありません。

### 9.2 ドキュメントの更新通知を受け取る方法

ドキュメントの更新についての通知を受け取るには、[www.tij.co.jp](http://www.tij.co.jp) のデバイス製品フォルダを開いてください。[通知] をクリックして登録すると、変更されたすべての製品情報に関するダイジェストを毎週受け取ることができます。変更の詳細については、改訂されたドキュメントに含まれている改訂履歴をご覧ください。

### 9.3 サポート・リソース

テキサス・インスツルメンツ E2E™ サポート・フォーラムは、エンジニアが検証済みの回答と設計に関するヒントをエキスパートから迅速かつ直接得ることができる場所です。既存の回答を検索したり、独自の質問をしたりすることで、設計で必要な支援を迅速に得ることができます。

リンクされているコンテンツは、各寄稿者により「現状のまま」提供されるものです。これらはテキサス・インスツルメンツの仕様を構成するものではなく、必ずしもテキサス・インスツルメンツの見解を反映したものではありません。テキサス・インスツルメンツの[使用条件](#)を参照してください。

### 9.4 Trademarks

テキサス・インスツルメンツ E2E™ is a trademark of Texas Instruments.

すべての商標は、それぞれの所有者に帰属します。

### 9.5 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

### 9.6 用語集

[テキサス・インスツルメンツ用語集](#) この用語集には、用語や略語の一覧および定義が記載されています。

## 10 Revision History

Changes from Revision A (August 2024) to Revision B (October 2024)	Page
• Changed the D-package pin numbers: Pin A from 11 to 12 and Pin B from 12 to 11 in <a href="#">表 4-1</a> .....	3

Changes from Revision * (May 2024) to Revision A (August 2024)	Page
• 「特長」のバス I/O 保護の一覧を変更 .....	1
• 動作中の電流を次のように変更:「特長」の < 5.6mA から < 5.3mA に .....	1
• Added table note 1 to THVD2452V-EP in the <i>IEC ESD Ratings</i> table .....	4

## 11 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

## 重要なお知らせと免責事項

テキサス・インスツルメンツは、技術データと信頼性データ（データシートを含みます）、設計リソース（リファレンス デザインを含みます）、アプリケーションや設計に関する各種アドバイス、Web ツール、安全性情報、その他のリソースを、欠陥が存在する可能性のある「現状のまま」提供しており、商品性および特定目的に対する適合性の默示保証、第三者の知的財産権の非侵害保証を含むいかなる保証も、明示的または默示的にかかわらず拒否します。

これらのリソースは、テキサス・インスツルメンツ製品を使用する設計の経験を積んだ開発者への提供を意図したものです。(1) お客様のアプリケーションに適した テキサス・インスツルメンツ製品の選定、(2) お客様のアプリケーションの設計、検証、試験、(3) お客様のアプリケーションに該当する各種規格や、その他のあらゆる安全性、セキュリティ、規制、または他の要件への確実な適合に関する責任を、お客様のみが単独で負うものとします。

上記の各種リソースは、予告なく変更される可能性があります。これらのリソースは、リソースで説明されている テキサス・インスツルメンツ製品を使用するアプリケーションの開発の目的でのみ、テキサス・インスツルメンツはその使用をお客様に許諾します。これらのリソースに関して、他の目的で複製することや掲載することは禁止されています。テキサス・インスツルメンツや第三者の知的財産権のライセンスが付与されている訳ではありません。お客様は、これらのリソースを自身で使用した結果発生するあらゆる申し立て、損害、費用、損失、責任について、テキサス・インスツルメンツおよびその代理人を完全に補償するものとし、テキサス・インスツルメンツは一切の責任を拒否します。

テキサス・インスツルメンツの製品は、[テキサス・インスツルメンツの販売条件](#)、または [ti.com](#) やかかる テキサス・インスツルメンツ製品の関連資料などのいづれかを通じて提供する適用可能な条項の下で提供されています。テキサス・インスツルメンツがこれらのリソースを提供することは、適用されるテキサス・インスツルメンツの保証または他の保証の放棄の拡大や変更を意味するものではありません。

お客様がいかなる追加条項または代替条項を提案した場合でも、テキサス・インスツルメンツはそれらに異議を唱え、拒否します。

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative

# PACKAGE OUTLINE

D0014A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

NOTES:

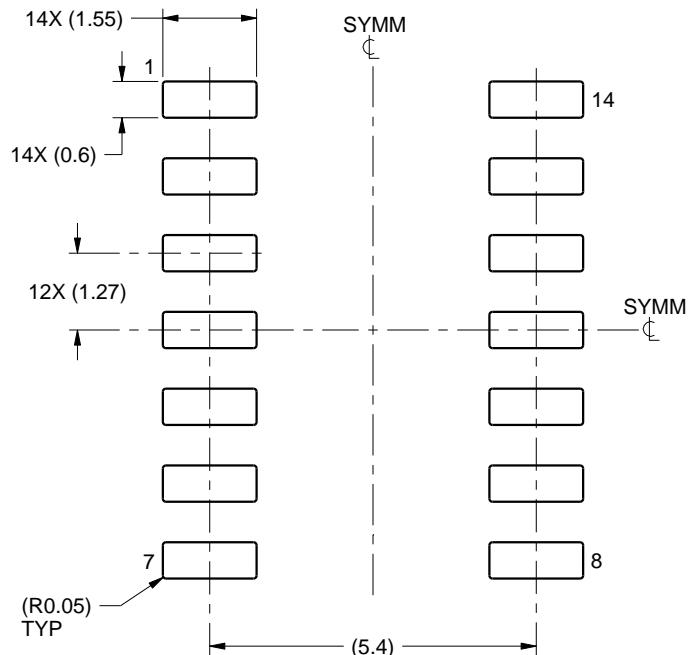

1. All linear dimensions are in millimeters. Dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm, per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.43 mm, per side.
5. Reference JEDEC registration MS-012, variation AB.

# EXAMPLE BOARD LAYOUT
