

## TL1431-SP クラス V、高精度プログラマブル・リファレンス

### 1 特長

- 100krad(Si) RHA、[5962R99620](#) に対して QMLV 認定済み
- 初期電圧の許容率: 0.4%
- 出力インピーダンス: 0.2Ω (代表値)
- 高速ターンオン: 500ns
- シンク電流容量: 1mA~100mA
- 低い基準電流 (REF)
- 可変出力電圧:  $V_{I(\text{ref})} \sim 36\text{V}$

### 2 アプリケーション

- 調整可能な基準電圧および電流
- フライバック SMPS の 2 次側レギュレーション
- ツェナーの代替品
- 電圧監視
- 基準電圧内蔵のコンパレータ
- コマンドとデータの処理 (C&DH)
- 光学画像処理のペイロード
- レーダー画像処理ペイロード
- 衛星用電源システム (EPS)

簡略回路図

### 3 概要

TL1431 は高精度にプログラム可能な電圧リファレンスであり、該当する車載、民生、防衛用温度範囲全体にわたって熱的な安定性が規定されています。出力電圧は、2 つの外付け抵抗を使用して、 $V_{I(\text{ref})}$  (約 2.5V) と 36V の間の任意の値に設定できます。このデバイスの出力インピーダンスは 0.2Ω (代表値) です。このデバイスは、アクティブ出力回路による非常に鋭いターンオン特性を備えているため、オンボード・レギュレーション、可変電源、スイッチング電源などのアプリケーションにおいて、ツェナー・ダイオードやその他の電圧リファレンスの優れた代替品となります。

TL1431 デバイスは、防衛用温度範囲  $-55^{\circ}\text{C} \sim 125^{\circ}\text{C}$  全体での動作が規定されています。

PIN			I/O	DESCRIPTION
NAME	JG	U		
ANODE	6	—	O	Common pin, normally connected to ground
CATHODE	1	—	I/O	Shunt current/voltage input
REF	8	—	I	Threshold relative to common ground
NC	2,3,4,5,7	2,3,4,5,6,7,9	—	No internal connection

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>KA</sub>	Cathode voltage <sup>(2)</sup>		37	V
I <sub>KA</sub>	Continuous cathode current	-100	150	mA
I <sub>I(ref)</sub>	Reference input current	-0.05	10	mA
T <sub>J</sub>	Operating virtual junction temperature		150	°C
	Lead temperature	1.6 mm (1/16 in) from case for 10 s		°C
T <sub>stg</sub>	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to ANODE, unless otherwise noted.

### 6.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

		MIN	MAX	UNIT
V <sub>KA</sub>	Cathode voltage	V <sub>I(ref)</sub>	36	V
I <sub>KA</sub>	Cathode current	1	100	mA
T <sub>A</sub>	Operating free-air temperature	-55	125	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	TL1431-SP		UNIT
	JG (CDIP)	U (CFP)	
	8 PINS	10 PINS	
R <sub>θJC</sub>	Junction-to-case thermal resistance <sup>(2)</sup> <sup>(3)</sup>		°C/W
	14.5	19.1	

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).
- (2) Maximum power dissipation is a function of T<sub>J(max)</sub>, R<sub>θJC</sub>, and T<sub>C</sub>. The maximum allowable power dissipation at any allowable case temperature is P<sub>D</sub> = (T<sub>J(max)</sub> - T<sub>C</sub>) / R<sub>θJC</sub>. Operating at the absolute maximum T<sub>J</sub> of 150°C can affect reliability.
- (3) The package thermal impedance is calculated in accordance with MIL-STD-883.

## 6.5 Electrical Characteristics

at specified free-air temperature,  $I_{KA} = 10 \text{ mA}$  (unless otherwise noted)

PARAMETER	TEST CONDITIONS	$T_A$ (2)	TEST CIRCUIT	MIN	TYP	MAX	UNIT
$V_{I(\text{ref})}$ Reference input voltage	$V_{KA} = V_{I(\text{ref})}$	25°C	☒ 7-1	2475	2500	2540	mV
		Full range		2460	2550		
$V_{I(\text{dev})}$ Deviation of reference input voltage over full temperature range(3)	$V_{KA} = V_{I(\text{ref})}$	Full range	☒ 7-1		17	55(1)	mV
$\frac{\Delta V_{I(\text{ref})}}{\Delta V_{KA}}$ Ratio of change in reference input voltage to the change in cathode voltage	$\Delta V_{KA} = 3 \text{ V to } 36 \text{ V}$	Full range	☒ 7-2		-1.1	-2	mV/V
$I_{I(\text{ref})}$ Reference input current	$R1 = 10 \text{ k}\Omega, R2 = \infty$	25°C	☒ 7-2		1.5	2.5	$\mu\text{A}$
		Full range			5		
$I_{I(\text{dev})}$ Deviation of reference input current over full temperature range(3)	$R1 = 10 \text{ k}\Omega, R2 = \infty$	Full range	☒ 7-2		0.5	3(1)	$\mu\text{A}$
$I_{\text{min}}$ Minimum cathode current for regulation	$V_{KA} = V_{I(\text{ref})}$	25°C	☒ 7-1		0.45	1	mA
$I_{\text{off}}$ Off-state cathode current	$V_{KA} = 36 \text{ V}, V_{I(\text{ref})} = 0$	25°C	☒ 7-3		0.18	0.5	$\mu\text{A}$
		Full range			2		
$ z_{KA} $ Output impedance(4)	$V_{KA} = V_{I(\text{ref})}, f \leq 1 \text{ kHz}, I_{KA} = 1 \text{ mA to } 100 \text{ mA}$	25°C	☒ 7-1		0.2	0.4	$\Omega$

- (1) On products compliant to MIL-PRF-38535, this parameter is not production tested.  
 (2) Full range is  $-55^\circ\text{C}$  to  $125^\circ\text{C}$ .  
 (3) The deviation parameters  $V_{I(\text{dev})}$  and  $I_{I(\text{dev})}$  are defined as the differences between the maximum and minimum values obtained over the rated temperature range. The average full-range temperature coefficient of the reference input voltage  $\alpha_{V_{I(\text{ref})}}$  is defined as:

$$\left| \alpha_{V_{I(\text{ref})}} \right| \left( \frac{\text{ppm}}{^\circ\text{C}} \right) = \frac{\left( \frac{V_{I(\text{dev})}}{V_{I(\text{ref}) \text{ at } 25^\circ\text{C}}} \right) \times 10^6}{T_A}$$

where:

$\Delta T_A$  is the rated operating temperature range of the device.

$\alpha_{V_{I(\text{ref})}}$  is positive or negative, depending on whether minimum  $V_{I(\text{ref})}$  or maximum  $V_{I(\text{ref})}$ , respectively, occurs at the lower temperature.

- (4) The output impedance is defined as:  $|z_{KA}| = \frac{\Delta V_{KA}}{\Delta I_{KA}}$

When the device is operating with two external resistors (see ☒ 7-2), the total dynamic impedance of the circuit is given by:  $|z'| = \frac{\Delta V}{\Delta I}$ ,

which is approximately equal to  $|z_{KA}| \left( 1 + \frac{R1}{R2} \right)$ .

## 6.6 Typical Characteristics

## 8 Detailed Description

### 8.1 Overview

The TL1431 device has proven ubiquity and versatility across a wide range of applications, ranging from power to signal path. This is due to its key components containing an accurate voltage reference and op amp, which are very fundamental analog building blocks. TL1431 is used in conjunction with its key components to behave as a single voltage reference, error amplifier, voltage clamp, or comparator with integrated reference. TL1431 can be operated and adjusted to cathode voltages from 2.5 V to 36 V, making this part optimum for a wide range of end equipments in aerospace, industrial, auto, telecom, and computing. In order for this device to behave as a shunt regulator or error amplifier,  $> 1$  mA ( $I_{min(max)}$ ) must be supplied in to the cathode pin. Under this condition, feedback can be applied from the Cathode and Ref pins to create a replica of the internal reference voltage. The TL1431-SP devices are characterized for operation from  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ .

### 8.2 Functional Block Diagram

### 8.3 Feature Description

TL1431 consists of an internal reference and amplifier that outputs a sink current base on the difference between the reference pin and the virtual internal pin. The sink current is produced by the internal Darlington pair, shown in Detailed Schematic. A Darlington pair is used in order for this device to be able to sink a maximum current of 100 mA. When operated with enough voltage headroom ( $\geq 2.5$  V) and cathode current ( $I_{KA}$ ), TL1431 forces the reference pin to 2.5 V. However, the reference pin can not be left floating, as it needs  $I_{REF} \geq 5$   $\mu\text{A}$  (see [Electrical Characteristics – TL1431-SP](#)). This is because the reference pin is driven into an npn, which needs base current to operate properly. When feedback is applied from the cathode and reference pins, TL1431 behaves as a Zener diode, regulating to a constant voltage dependent on current being supplied into the cathode. This is due to the internal amplifier and reference entering the proper operating regions. The same amount of current needed in the above feedback situation must be applied to this device in open loop, servo, or error amplifying implementations in order for it to be in the proper linear region giving TL1431 enough gain. Unlike many linear regulators, TL1431 is internally compensated to be stable without an output capacitor between the cathode and anode. However, if desired an output capacitor can be used as a guide to assist in choosing the correct capacitor to maintain stability.

图 8-1. Symbol

☒ 8-2. Equivalent Schematic

## 8.4 Device Functional Modes

### 8.4.1 Open Loop (Comparator)

When the cathode or output voltage or current of TL1431 is not being fed back to the reference or input pin in any form, this device is operating in open loop. With proper cathode current ( $I_{KA}$ ) applied to this device, TL1431 has the characteristics shown in ☒ 9-1. With such high gain in this configuration, TL1431 is typically used as a comparator. With the reference integrated makes TL1431 the preferred choice when users are trying to monitor a certain level of a single signal.

### 8.4.2 Closed Loop

When the cathode or output voltage or current of TL1431 is being fed back to the reference or input pin in any form, this device is operating in closed loop. The majority of applications involving TL1431 use it in this manner to regulate a fixed voltage or current. The feedback enables this device to behave as an error amplifier, computing a portion of the output voltage and adjusting it to maintain the desired regulation. This is done by relating the output voltage back to the reference pin in a manner to make it equal to the internal reference voltage, which can be accomplished through resistive or direct feedback.

## 9 Application and Implementation

### 注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくこととなります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

### 9.1 Application Information

As the TL1431 device has many applications and setups, there are many situations that this datasheet cannot characterize in detail. The linked application notes help the designer make the best choices when using this part. [Understanding Stability Boundary Conditions Charts in TL431, TL432 Data Sheet \(SLVA482\)](#) provides a deeper understanding of this devices stability characteristics and aid the user in making the right choices when choosing a load capacitor. [Setting the Shunt Voltage on an Adjustable Shunt Regulator \(SLVA445\)](#) assists designers in setting the shunt voltage to achieve optimum accuracy for this device.

### 9.2 Typical Application

Copyright © 2016, Texas Instruments Incorporated

図 9-1. Comparator Application Schematic

#### 9.2.1 Design Requirements

For this design example, use the parameters listed in 表 9-1 as the input parameters.

表 9-1. Design Parameters

PARAMETER	VALUE
Reference initial accuracy	0.4%
Supply voltage	48 V
Cathode current ( $I_K$ )	50 $\mu$ A
Output voltage level	2.5 V to 36 V
Load capacitance	1 nF
Feedback resistor values and accuracy (R1 and R2)	10 k $\Omega$

#### 9.2.2 Detailed Design Procedure

When using TL1431 as a shunt regulator, determine the following:

- Input voltage range
- Temperature range
- Total accuracy

- Cathode current
- Reference initial accuracy
- Output capacitance

### 9.2.3 Programming Output/Cathode Voltage

To program the cathode voltage to a regulated voltage a resistive bridge must be shunted between the cathode and anode pins with the mid point tied to the reference pin. This can be seen in [Figure 9-1](#), with R1 and R2 being the resistive bridge. The cathode/output voltage in the shunt regulator configuration can be approximated by the equation shown in [Figure 9-1](#). The cathode voltage can be more accurately determined by taking in to account the cathode current with [Equation 1](#).

$$V_o = (1 + R1 / R2) \times V_{REF} - I_{REF} \times R1 \quad (1)$$

For this equation to be valid, TL1431 must be fully biased so that it has enough open loop gain to mitigate any gain error. This can be done by meeting the I<sub>min</sub> specification denoted in [Section 6.5](#).

### 9.2.4 Total Accuracy

When programming the output above unity gain ( $V_{KA}=V_{REF}$ ), TL1431 is susceptible to other errors that may effect the overall accuracy beyond  $V_{REF}$ . These errors include:

- R1 and R2 accuracies
- $V_{I(dev)}$  – Change in reference voltage over temperature
- $\Delta V_{REF} / \Delta V_{KA}$  – Change in reference voltage to the change in cathode voltage
- $|z_{KA}|$  – Dynamic impedance, causing a change in cathode voltage with cathode current

Worst case cathode voltage can be determined taking all of the variables in to account.

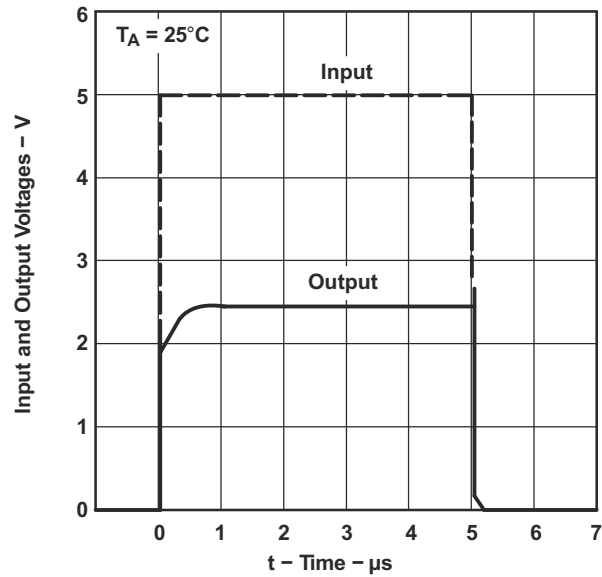

### 9.2.5 Stability

Though TL1431 is stable with no capacitive load, the device that receives the shunt regulator's output voltage could present a capacitive load that is within the TL1431 region of stability, shown in [Figure 6-16](#). Also, designers may use capacitive loads to improve the transient response or for power supply decoupling. When using additional capacitance between Cathode and Anode, refer to [Figure 6-16](#).

### 9.2.6 Start-up Time

As shown in [Figure 9-2](#), TL1431 has a fast response up to approximately 2 V and then slowly charges to its programmed value. This is due to the compensation capacitance the TL1431 has to meet its stability criteria. Despite the secondary delay, TL1431 still has a fast response suitable for many clamp applications.

### 9.2.7 Application Curve

9-2. TL1431 Start-up Response

## 9.2.8 System Examples

表 9-2 lists example circuits of the TL1431.

## 10 Power Supply Recommendations

When using TL1431 as a linear regulator to supply a load, designers typically use a bypass capacitor on the output/cathode pin. When doing this, be sure that the capacitance is within the stability criteria shown in [Figure 6-16](#). To not exceed the maximum cathode current, ensure the supply voltage is current limited. Also, be sure to limit the current being driven into the Ref pin, as not to exceed its absolute maximum rating. For applications shunting high currents, pay attention to the cathode and anode trace lengths, adjusting the width of the traces to have the proper current density.

## 11 Layout

### 11.1 Layout Guidelines

Bypass capacitors must be placed as close to the part as possible. Current-carrying traces need to have widths appropriate for the amount of current they are carrying; in the case of the TL1431, these currents are low.

### 11.2 Layout Example

☒ 11-1. 8-Pin JG Layout Example

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**OTHER QUALIFIED VERSIONS OF TL1431-SP :**

- Catalog : [TL1431](#)
- Automotive : [TL1431-Q1](#)
- Enhanced Product : [TL1431-EP](#)
- Military : [TL1431M](#)

**NOTE: Qualified Version Definitions:**

- Catalog - TI's standard catalog product
- Automotive - Q100 devices qualified for high-reliability automotive applications targeting zero defects
- Enhanced Product - Supports Defense, Aerospace and Medical Applications
- Military - QML certified for Military and Defense Applications

# PACKAGE OUTLINE

JG0008A

CDIP - 5.08 mm max height

CERAMIC DUAL IN-LINE PACKAGE

**NOTES:**

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This package can be hermetically sealed with a ceramic lid using glass frit.
4. Index point is provided on cap for terminal identification.
5. Falls within MIL STD 1835 GDIP1-T8
