

New Product Update

Decrease power-supply design time for space-constrained industrial applications

Christine Chacko

Product Marketing Engineer

Harrison Overturf

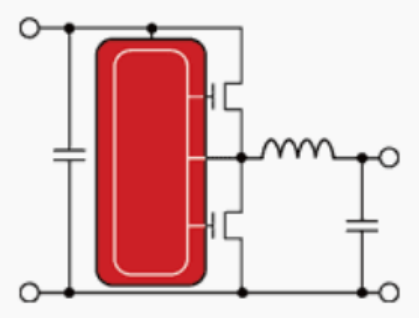

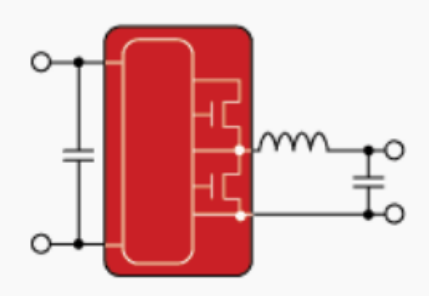

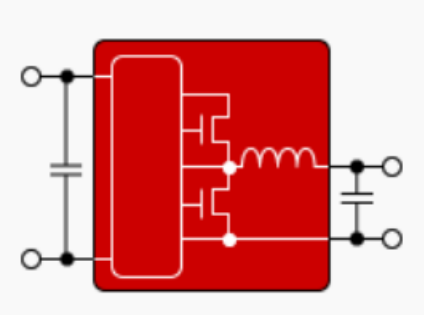

Systems Engineer

Agenda

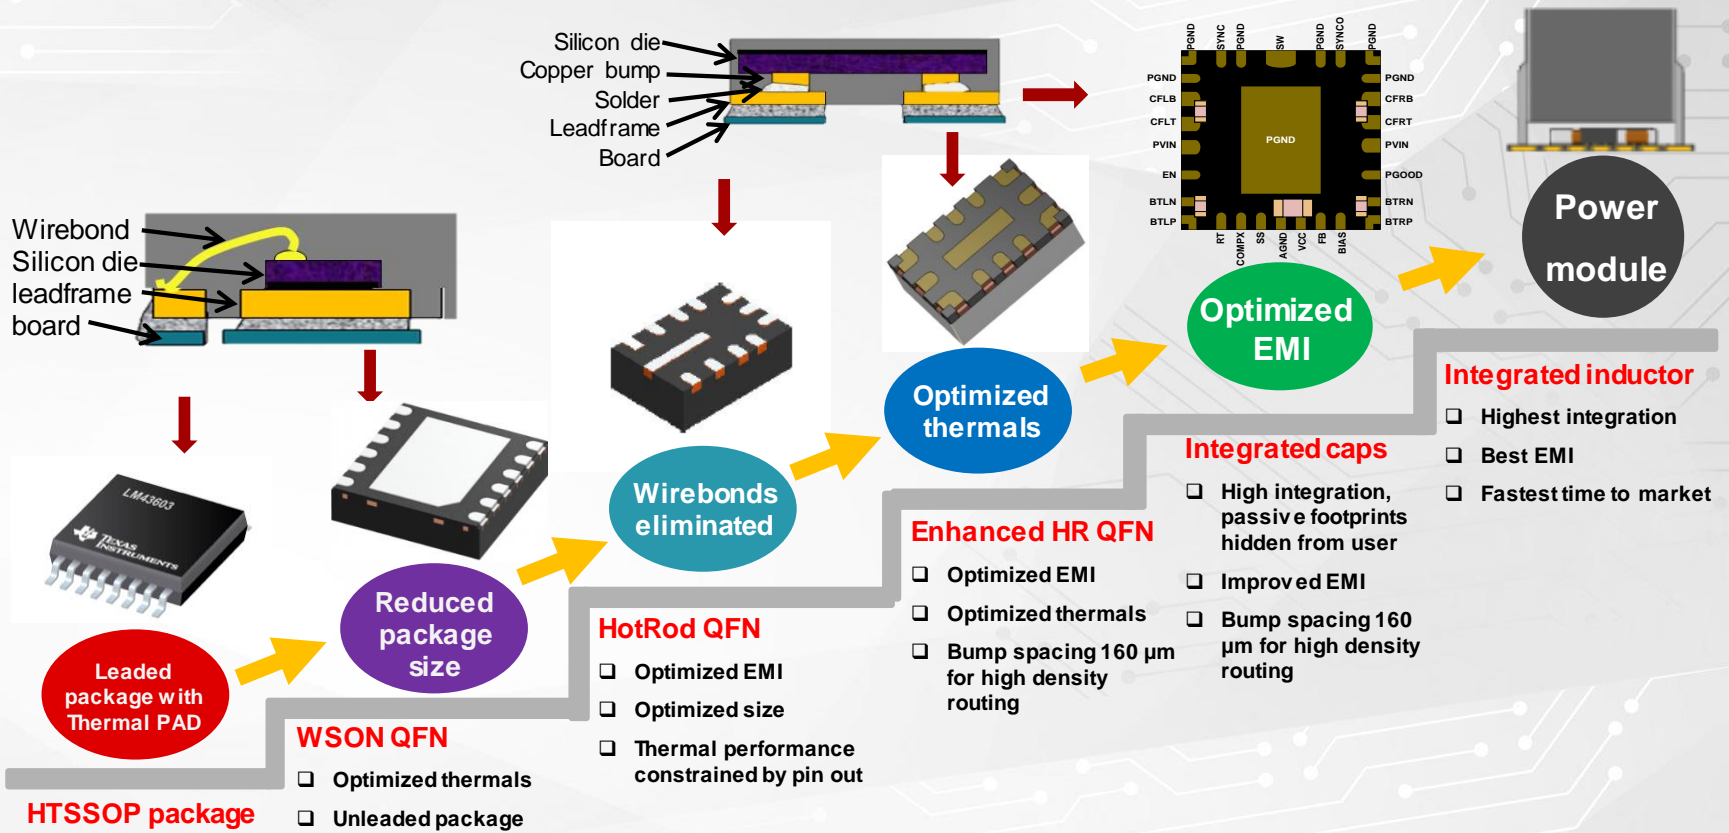

- What is a buck module?
- TPSM365R1 and TPSM365R15 product overview
- Benefits of using a buck module solution

What is a buck module?

Step-down (buck) switching regulators

Controller	Converter	Power Module
 <ul style="list-style-type: none">- External FETs- External inductor	 <ul style="list-style-type: none">- Internal FETs- External inductor	 <ul style="list-style-type: none">- Internal FETs- Internal inductor- Internal caps and resistors

Package evolution

TPSM365R1 and TPSM365R15 product overview

Benefits overview

- The TPSM365R1/15 provides pin-to-pin scalability with the TPSM33625 and TPSM365R6 across the 36V and 65V space from 0.1A to 2.5A
- Improved EMI performance with FCOL packaging, integrated boot capacitor and Spread Spectrum
- Reduce time to market with lower BOM count with module solution
- Excellent I_Q performance
- Small, simplified layout
 - Package area: 15.75 mm²

TPSM365R1/15

65 V, 100 mA and 150 mA Synchronous Step-Down DC-DC Power Module

Features

- **6 μ A No Load I_q** with **Fixed V_{OUT} / BIAS** option
- **Combined Fixed V_{OUT} and ADJ V_{OUT} into one device**
 - Fixed 3.3-V / ADJ (1 V-16 V)
 - Fixed 5.0-V / ADJ (1 V-16 V)
- **Highest Low Load Efficiency**
- **Wide V_{IN} range: 3.4 V – 65 V (Abs. Max = 70 V)**
 - **V_{IN} UVLO Falling = 3 V**
- **MODE/SYNC** version pin variant
 - **Pin-select Auto Mode or FPWM** operation at light load
 - **Synchronizable** to External Clock 200 kHz to 2.2 MHz
- **RT pin** for Adjustable Output. Configurations:
 - RT \rightarrow GND=1 MHz, RT \rightarrow VCC=2.2 MHz, Resistor Program=200 kHz-2.2 MHz
- **Designed for Low EMI**
 - **FCOL Package (4.5 mm X 3.5 mm X 2 mm)**
 - **Pseudo Random Spread Spectrum (PRSS)**
- **Precision EN/UVLO and PGOOD with delay**
- **Operating Junction temp. range -40°C to 125°C**

Benefits

- Wide input for applications with unregulated 24-V bus. No input protection needed.
- Mode pin to enable fixed frequency and ultra low ripple over entire load range. PFM mode for applications which require high efficiency at light loads
- Adjustable frequency to enable a wide V_{OUT} range.
- Bias input for Fixed V_{OUT} options to improve efficiency over load
- Ease of power sequencing with PGOOD

Adjustable V_{OUT}

Fixed V_{OUT}

Applications

- Industrial: Control/field transmitters, test equipment, PLC

Pin-to-pin compatibility

4.5-mm × 3.5-mm × 2-mm pin-to-pin compatible HR-QFN 11-pin package solution from 100 mA to 2.5 A

65 V_{IN}
0.1 A

65 V_{IN}
0.15 A

65 V_{IN}
0.3 A

65 V_{IN}
0.6 A

36 V_{IN}
1.5 A

36 V_{IN}
2.5 A

TPSM365R1

TPSM365R15

TPSM365R3

TPSM36R6

TPSM33615

TPSM33625

Benefits of using a buck module solution

Design factors to consider

Total solution cost consists of

- Material cost a.k.a. “BOM” price
 - IC price
 - Inductor, capacitors, resistors, etc.
- PCB costs
 - Footprint area
 - Via costs
 - Individual component placement cost
- Design time
 - R&D cost, time sensitivity of market

Benefits to using a module

- Materials
 - Less needed passives and less sourcing of material
 - TI offers competitive pricing which may offer you a better deal on materials
- PCB costs
 - Modules enable smaller footprints and easier layouts
- Design time
 - Less validation and research needed when selecting components
 - Faster and easier designs allow for engineers to focus on other critical challenges and speed time to market

EMI advantages by optimizing layout

- Reducing the high di/dt loop area – integrated input capacitance.
- Reducing the high dv/dt node area – integrated L and smaller switch node.

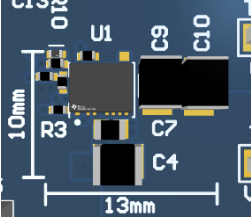

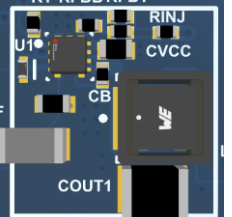

Discrete solution without optimized layout

DC-DC Power Module

Converter vs module

<p>Design specifications: V_{IN} (nominal) = 24 V $V_{OUT} = 3.3\text{ V} \mid I_{OUT} = 0.15\text{ A}$</p>	<p>Module TPSM365R15 65 V_{IN}, 0.15-A, 6.5-mm x 7.5-mm QFN</p>	<p>Converter alternative LMR36502 65-V_{IN}, 0.15-A, 2.0-mm x 2.0-mm VQFN</p>
<p>Optimized layout (EVM)</p>		
<p>Efficiency [24 V to 3.3 V, 0.15 A]</p>	<p>75%</p>	<p>82%</p>
<p>Solution area</p>	<p>130 mm²</p>	<p>150 mm²</p>
<p>Solution component count</p>	<p>5 (11 on EVM*)</p>	<p>7 (17 on EVM*)</p>
<p>1-ku Web price</p>	<p>\$1.30</p>	<p>\$1.25</p>
<p>1-ku BOM cost**</p>	<p>\$1.46</p>	<p>\$1.65</p>

*EVM optimized for multiple use cases

**Cost will change based on available passive components

Buck modules | innovation in power density

Smallest solution size while quickly meeting EMI standards by reducing emissions

Smaller footprint

Reduce the BOM and PCB area

- Innovative package techniques and High performance silicon
- **Shrink solution sizes up to 50%** and use as little as 4 external components

Reduce design time and complexity

Allow TI engineers to do the heavy work & Speed time to market

- **Easy to use** and design with TI modules allowing more time to be spent on other critical design aspects
- TI Module designer selects optimal BoM and passives for the IC and does rigorous vetting of internal BOM components

Eliminate:

- Control architecture influences
- Layout challenges
- Inductor sourcing
- Lab prototyping

Ultra-Low EMI Performance

Fundamentally reduce generated EMI at the source

- Integrated passives and low-EMI performance features create inherent low noise devices
- **Shrink filters** and **meet EMI standards easier** with features like: DRSS, low noise package design, minimized parasitic loops with integrated passives and more

Getting started

You can start evaluating this device leveraging the following:

Content type	Content title	Link to content or more details
