4 Connector and Test Point Descriptions

4.1 Enable Switches (SW1 and SW2)

The TPS53127EVM-614 includes independent enable switches for each of the two outputs. When the switch is in the DIS position, the channel is disabled and discharged per the internal discharge characteristics of the TPS53127.

To enable VOUT1, place SW1 in the EN position.

To enable VOUT2, place SW2 in the EN position.

4.2 Switching Frequency Select Switch (SW3)

The TPS53127EVM-614 does not populate SW3. When using the TPS53127EVM-614 to evaluate the TPS53126 controller in the TSSOP package, SW3 can be populated to allow selection of the TPS53126 switching frequency between 350 kHz and 700 kHz.

4.3.1 Input Voltage Monitoring (TP3 and TP9)

The TPS53127EVM-614 provides two test points for measuring the voltage applied to the module. This allows the user to measure the actual module voltage without losses from input cables and connectors. All input voltage measurements should be made between TP9 and TP3. To use TP9 and TP3, connect a voltmeter positive terminal to TP9 and negative terminal to TP3.

4.3.2 Channel 1 Output Voltage Monitoring (TP4 and TP8)

The TPS53127EVM-614 provides two test points for measuring the voltage generated at the VO1 output by the module. This allows the user to measure the actual output voltage without losses from output cables and connectors. All DC output voltage measurements should be made between TP8 and TP4. To use TP8 and TP4, connect a voltmeter positive terminal to TP8 and negative terminal to TP4.

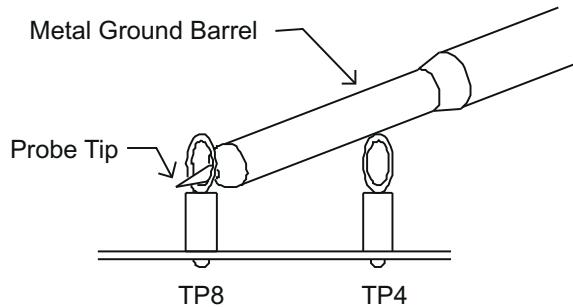

Figure 4-1. Tip and Barrel Measurement for Output Voltage Ripple

4.3.3 Channel 2 Output Voltage Monitoring (TP6 and TP7)

The TPS53127EVM-614 provides two test points for measuring the voltage generated at the VO1 output by the module. This allows the user to measure the actual output voltage without losses from output cables and connectors. All DC output voltage measurements should be made between TP7 and TP6. To use TP7 and TP6, connect a voltmeter positive terminal to TP7 and negative terminal to TP6.

4.3.4 Soft-Start Voltage Monitoring (TP1, TP2, and TP3)

The TPS53127EVM-614 provides two test points for measuring the soft-start ramp voltages. TP1 monitors the soft-start ramp of Channel 1. TP2 monitors the soft-start ramp of Channel 2. To use TP1 or TP2, connect an oscilloscope probe between TP1 or TP2 and TP3.

4.3.5 Switching Node Monitoring (TP3, TP5, and TP11)

The TPS53127EVM-614 provides two test points for measuring the switching node waveform voltages. TP5 monitors the switching node of Channel 1. TP2 monitors the switching node of Channel 2. To use TP5 or TP11, connect an oscilloscope probe between TP5 or TP11 and TP3.

4.3.6 5-V Regulator Output Monitoring (TP3 and TP10)

The TPS53127EVM-614 provides a test point for measuring the output of the internal 5-V regulator. TP10 monitors the output voltage of the internal 5-V regulator. To use TP10, connect a voltmeter positive terminal to TP10 and negative terminal to TP3.

5 Test Setup

5.1 Equipment

5.1.1 Voltage Source

V_{IN}

The input voltage source (V_{VIN}) is a 0-V to 25-V variable DC source capable of supplying 3.0 A_{DC} minimum.

5.1.2 Meters

A1: 0 A_{DC}–4 A_{DC}, Ammeter

V1: V_{IN}, 0-V to 22-V voltmeter

V2: V_{OUT1}, 0-V to 2-V voltmeter

V3: V_{OUT2}, 0-V to 2-V voltmeter

5.1.3 Loads

LOAD1: The output load is an electronic load set for constant current mode capable of 0 A_{DC} to 4 A_{DC} at 1.05 V_{DC}.

LOAD2: The output load is an electronic load set for constant current mode capable of 0 A_{DC} to 4 A_{DC} at 1.80 V_{DC}.

5.1.4 Oscilloscope

Oscilloscope

The oscilloscope is an analog or digital oscilloscope set for AC-coupled measurement with 20-MHz bandwidth limiting. Use 20-mV/division vertical resolution and 1.0-μs/division horizontal resolution for output ripple voltage test. Set cursors at +20 mV and –20 mV.

Probe

One oscilloscope probe is a Tektronix P6138 or equivalent oscilloscope probe with exposed conductive ground barrels.

5.1.5 Recommended Wire Gauge

V_{IN} to J3

The connection between the source voltage, V_{VIN} , and J1 of the TPS53127EVM-614 can carry as much as 2.0 A_{DC}. The minimum recommended wire size is AWG #16 with the total length of wire less than two feet (1-foot input, 1-foot return).

J1 to LOAD1 and J2 to LOAD2

The connection between J1 and LOAD1 and J2 and LOAD2 of the TPS53127EVM-614 can carry as much as 4 A_{DC} each. The minimum recommended wire size is AWG #14, with the total length of wire less than two feet (1-foot input, 1-foot return).

5.1.6 Other

FAN

The TPS53127EVM-614 evaluation module includes components that can get hot to the touch. Because this EVM is not enclosed to allow probing of circuit nodes, a small fan capable of 200 Ifm–400 Ifm is required to reduce component temperatures when operating.

5.2 Equipment Setup

Figure 5-1 shows the recommended basic test setup to evaluate the TPS53127EVM-614. Note that although the return for J3 and J1 and JP2 are the same system ground, the connections should remain separate as shown in Figure 5-1.

5.2.1 Procedure

1. Working at an ESD workstation, make sure that any wrist straps, bootstraps, or mats are connected referencing the user to earth ground before power is applied to the EVM. An electrostatic smock and safety glasses should also be worn.

Test Setup

2. Prior to connecting the DC input source, V_{IN} , it is advisable to limit the source current from V_{IN} to 3.0 A maximum. Make sure V_{IN} is initially set to 0 V and connected as shown in Figure 5-1.
3. Verify SW1 and SW2 are in the desired position.
4. Place a fan as shown in Figure 5-1. Turn it on, making sure that air is flowing across the EVM.

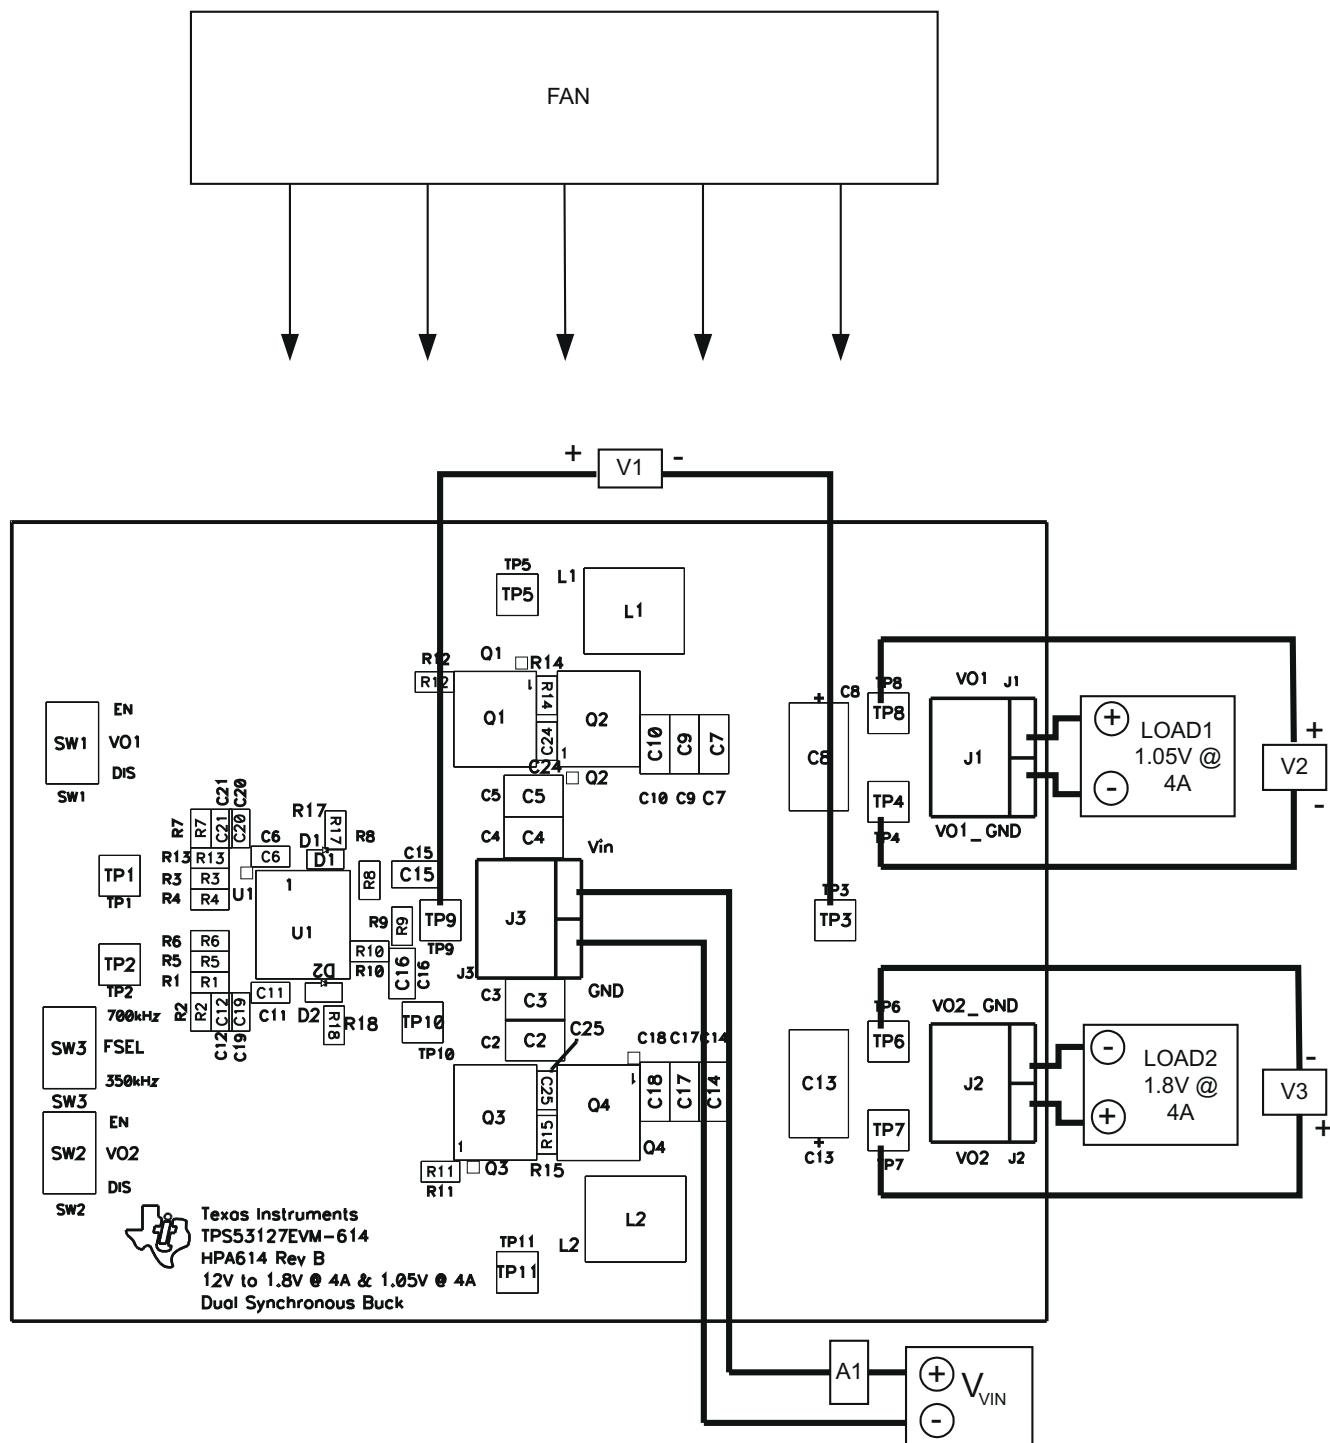

5.2.2 Diagram

7 TPS53127EVM-614 EVM Assembly Drawings and Layout

Figure 7-1 through Figure 7-5 show the design of the TPS53127EVM-614 printed circuit board. The EVM has been designed using a 4-layer, 2-oz copper-clad circuit board 3.5 in 2.7 to allow the user to easily view, probe, and evaluate the TPS53127 control IC in a practical application. Moving components to both sides of the PCB or using additional internal layers can offer additional size reduction for space constrained systems.
