## **SMP-TPS61201-MVK MAVRK Submodule**

### **1 Purpose**

This document discusses the Modular and Versatile Reference Kit (MAVRK) [TPS61201](#) boost converter submodule. After reading this guide, a developer should understand the features of the SMP-TPS61201-MVK. For more information on the MAVRK system, see the [MAVRK introduction page](#).

### **2 EVM Overview**

The SMP-TPS61201-MVK highlights the [TPS61201](#) boost converter with 1.3-A switches and down-mode. The [TPS61201](#) boost converter submodule is intended to step up 0.3 to 3.3 V DC to a fixed 3.3 V on [MAVRK PMU](#) modules, such as the [PMU-CARRIER-MVK](#) and [PMU-BAT-MVK](#).

#### **2.1 EVM Description**

**Figure 1. SMP-TPS61201-MVK Submodule**

The SMP-TPS61201-MVK contains the [TPS61201](#) integrated circuit (IC) and all other onboard components necessary to generate 3.3 V from a 0.3–5.5 V source. When the input voltage exceeds the output voltage, the [TPS61201](#) enters a down-conversion mode to maintain 3.3-V regulation. The SMP-TPS61201-MVK can be used with a [MAVRK PMU](#) carrier board to evaluate the [TPS61201](#) performance as part of a power-management system. An onboard I<sup>2</sup>C temperature sensor can report the temperature of the board to the carrier board.

## 2.2 Features

### 2.2.1 TPS61201 Features

- Fixed 3.3-V output voltage
- Greater than 90% efficiency at 300-mA output current ( $V_{IN} \geq 2.4$  V)
- Automatic transition between boost mode and down-conversion mode
- Device quiescent current less than 55  $\mu$ A
- Startup into full load at 0.5-V input voltage
- Operating input voltage range from 0.3 to 5.5 V
- Programmable undervoltage lockout threshold
- Output short-circuit protection under all operating conditions
- Power save mode for improved efficiency at low output power
- Forced fixed frequency operation possible
- Load disconnect during shutdown
- Overtemperature protection
- Small 3 mm  $\times$  3 mm QFN-10 package

### 2.2.2 SMP-TPS61201-MVK Features

- Fixed 3.3-V output
- Onboard [TMP103](#) I<sup>2</sup>C temperature sensor
- Compatible with [MAVRK PMU](#) carrier boards
- Breadboard compatible with 0.1-inch headers

## 2.3 Featured Applications

The SMP-TPS61201-MVK MAVRK submodule can be used on the following applications:

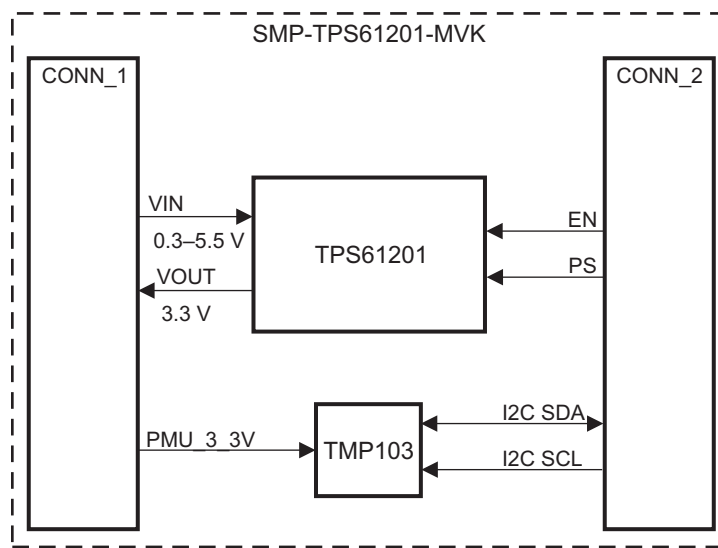

- All single-cell, two-cell, and three-cell alkaline battery powered products (NiCd, NiMH, or single-cell Li)
- Fuel cell and solar cell powered products
- Personal medical products
- White LEDs

## 2.4 Highlighted Products

The SMP-TPS61201-MVK MAVRK submodule highlights the following devices:

- [TPS61201 0.3-V Input Voltage Boost Converter with 1.3-A Switches and Down Mode in 3x3 QFN](#)
- [TMP103 Digital Temperature Sensor with I2C/SMBUS Expanded Interface](#)

## 2.5 Block Diagram

### 3 Hardware Description

#### 3.1 Power Requirements

The SMP-TPS61201-MVK can accept an input of 0.3 to 5.5 V from the carrier board, and generates a fixed 3.3-V output. If the [TPS61201](#) input voltage reaches or exceeds the output voltage, the converter automatically changes to a down-conversion mode. In this mode, the control circuit changes the behavior of the two rectifying switches. While switching continues, the control circuit sets the voltage drop across the rectifying switches as high as needed to regulate the output voltage. A high voltage drop causes the power losses in the converter to increase and the power losses must be taken into account for thermal consideration.

The maximum [TPS61201](#) output current depends on the input and output voltages, as [Figure 3](#) shows.

Figure 3. TPS6120x Maximum Current

Due to the small PCB area of the SMP-TPS61201-MVK, do not exceed 0.75 W of power consumption on the board. The onboard temperature sensor can be used to measure the temperature rise at different power levels.

The SMP-TPS61201-MVK can be used in a protoboard if pin 4 of CONN\_1 (PMU\_3\_3V) is tied to a pull-up voltage within the enable (EN) voltage range of the device. To avoid damage to the onboard temperature sensor, this voltage must not exceed 3.6 V. See the [Hardware Design Guide for MAVRK PMU DC-DC Submodules](#) for connector pinout information.

#### 3.2 Connector Signal Descriptions

For information about the SMP-TPS61201-MVK connector pinouts, see the [Hardware Design Guide for MAVRK PMU DC-DC Submodules](#).

#### 3.3 Getting Started: Configuring the EVM

The SMP-TPS61201-MVK is set up by default to enable power save mode at light loads. The power save mode can be set to disabled by default by removing resistor R<sub>7</sub> and installing resistor R<sub>4</sub>. This feature can be turned on and off in software by toggling the logic level on the PS pin of connector CONN\_2.

The [TPS61200](#) undervoltage lockout (UVLO) input can be used to shut down the main output if the supply voltage falls below the desired UVLO threshold voltage. The UVLO threshold voltage can be programmed using resistors  $R_2$  and  $R_5$ , as [Equation 1](#) shows.

$$R_2 = R_5 \left( \frac{V_{INMIN}}{V_{UVLO}} - 1 \right)$$

where  $V_{UVLO} = 250 \text{ mV}$  (1)

Resistor  $R_5$  must be in the 250-k $\Omega$  range to have a resistor-divider current approximately 100 times larger than the current into the UVLO pin.

To use the SMP-TPS61201-MVK with a MAVRK system, it must be connected to a DC-DC converter slot on a [MAVRK PMU](#) carrier board, such as the [PMU-CARRIER-MVK](#). See the [Configuring Power Submodules on a PMU Carrier Board](#) page for detailed setup information.

## 4 Board Files

### 4.1 Bill of Materials

#### 4.4 Fabrication Drawings

[Download PDF](#) of the fabrication drawing.

- UNLESS OTHERWISE SPECIFIED, ALL NOTES ARE APPLICABLE. NOTES PRECEDED BY AN UNMARKED [ ] ARE NOT APPLICABLE.
- ALL DIMENSIONS ARE IN INCHES UNLESS OTHERWISE NOTED.
  - PC SHALL BE FABRICATED TO IPC-6012, CLASS II AND WORKMANSHIP SHALL CONFORM TO IPC-600, CLASS II
  - CURRENT REVISIONS:  
MINIMUM COPPER WALL THICKNESS SHALL BE .001 INCH.  
FOR ALL PLATED THROUGH HOLES.
  - BOARD MATERIAL SHALL BE 100% 330HR OR EQUIVALENT. BOARD SHALL MEET OR EXCEED IPC-4101/26. COLOR: NATURAL.
  - BOARD MATERIAL AND CONSTRUCTION TO BE UL 94V-0 APPROVED AND MARKED ON THE FINISHED BOARD.
  - OVERALL BOARD THICKNESS TO BE .062 +/- .005 AND APPLIES AFTER ALL LAMINATION AND PLATING PROCESSES; MEASURED FROM COPPER TO COPPER.  
 MANUFACTURE'S UL MARKING, FLAMMABILITY RATING,  LOGO AND DATE CODE
  - TO BE PLACED IN COPPER ON BOTTOM SIDE OF THE BOARD.
  - PLATE ALL EXPOSED AREAS WITH ELECTROLESS NICKEL  
IMMERSION GOLD: NICKEL: 100 MICRO-INCHES MIN  
GOLD: 2-8 MICRO-INCHES MIN
  - APPLY LPI SOLDERMASK OVER BARE COPPER (SMOBC)  
COLOR: RED  
SOLDERMASK SHALL CONFORM TO IPC-SM-840 CLASS H, CURRENT REVISION
  - SOLDERMASK ARTWORK HAS ZERO (0) OVERSIZED PADS.  
FABRICATION VENDOR IS ALLOWED TO ADJUST THE COMPONENT SOLDERMASK PADS TO MEET THEIR TOOLING REQUIREMENTS.
  - SILKSCREEN-APPLY NON-CONDUCTIVE LPI OR EQUIVALENT PER THE ARTWORK  
COLOR: WHITE
  - P.C. BOARD TO BE FREE OF DIRT, OIL, FINGER PRINTS, ETC.
  - BOARD WARPAGE: WARP AND TWIST SHALL NOT EXCEED .0075 INCH PER INCH MEASURED AT ANY LOCATION OR DIRECTION ON THE BOARD.
  - BOARD MUST BE ELECTRICALLY TESTED USING SUPPLIED IPC-D-356 NETLIST.

DRILL CHART: TOP TO BOTTOM				
ALL UNITS ARE IN MILS				
FIGURE	SIZE	TOLERANCE	PLATED	QTY
+	8.0	+3.0/-3.0	PLATED	5
+	10.0	+3.0/-3.0	PLATED	19
*	14.0	+3.0/-3.0	PLATED	5
□	38.0	+3.0/-3.0	PLATED	12

## 4.5 Request Gerber and Schematic Files

To request Gerber or schematic files for the SMP-TPS61201-MVK module, see the [MAVRK Gerber Request](#) webpage.

## 5 MAVRK Links

### 5.1 Additional Information on MAVRK

Visit the [MAVRK wiki pages](#) to get comprehensive information on MAVRK.

### 5.2 MAVRK Questions

Post any questions on the [MAVRK Forum](#) and get an answer from the MAVRK team.

### 5.3 Additional Technical Information on MAVRK Hardware

Read through the wiki pages related to [designing MAVRK hardware](#).

### 5.4 Additional Technical Information on MAVRK Software

Read through the wiki pages related to [working with MAVRK software](#).

### 5.5 Obtaining a MAVRK Board

See the [MAVRK Starter Kit tool folder page](#) to order a MAVRK Starter kit. To order other modules, search for them by name on the [TI Web site](#) to find their tool folder pages.

## 6 Precautions and Certifications

### 6.1 ESD Precautions

The following guidelines should be followed in order to avoid ESD damage to the board components:

- Any person handling boards must be grounded either with a wrist strap or ESD protective footwear, used in conjunction with a conductive or static-dissipative floor or floor mat.
- The work surface where boards are placed for handling, processing, testing, etc., must be made of static-dissipative material and be grounded to ESD ground.
- All insulator materials either must be removed from the work area or they must be neutralized with an ionizer. Static-generating clothes should be covered with an ESD-protective smock.
- When boards are being stored, transferred between operations or workstations, or shipped, they must be maintained in a Faraday-shield container whose inside surface (touching the boards) is static dissipative.

## 6.2 Certifications

[FCC and ICES standard EMC test report for the SMP-TPS61201-MVK Submodule, aboard the MB-PRO-MVK motherboard](#)

## EVALUATION BOARD/KIT/MODULE (EVM) ADDITIONAL TERMS

Texas Instruments (TI) provides the enclosed Evaluation Board/Kit/Module (EVM) under the following conditions:

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/ kit may be returned within 30 days from the date of delivery for a full refund. THE FOREGOING LIMITED WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please visit [www.ti.com/esh](http://www.ti.com/esh) or contact TI.

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used. TI currently deals with a variety of customers for products, and therefore our arrangement with the user is not exclusive. TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.

## REGULATORY COMPLIANCE INFORMATION

As noted in the EVM User's Guide and/or EVM itself, this EVM and/or accompanying hardware may or may not be subject to the Federal Communications Commission (FCC) and Industry Canada (IC) rules.

For EVMs **not** subject to the above rules, this evaluation board/kit/module is intended for use for ENGINEERING DEVELOPMENT, DEMONSTRATION OR EVALUATION PURPOSES ONLY and is not considered by TI to be a finished end product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC or ICES-003 rules, which are designed to provide reasonable protection against radio frequency interference. Operation of the equipment may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

### General Statement for EVMs including a radio

*User Power/Frequency Use Obligations:* This radio is intended for development/professional use only in legally allocated frequency and power limits. Any use of radio frequencies and/or power availability of this EVM and its development application(s) must comply with local laws governing radio spectrum allocation and power limits for this evaluation module. It is the user's sole responsibility to only operate this radio in legally acceptable frequency space and within legally mandated power limitations. Any exceptions to this is strictly prohibited and unauthorized by Texas Instruments unless user has obtained appropriate experimental/development licenses from local regulatory authorities, which is responsibility of user including its acceptable authorization.

### For EVMs annotated as FCC – FEDERAL COMMUNICATIONS COMMISSION Part 15 Compliant

#### Caution

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

### FCC Interference Statement for Class A EVM devices

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

### **FCC Interference Statement for Class B EVM devices**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### **For EVMs annotated as IC – INDUSTRY CANADA Compliant**

This Class A or B digital apparatus complies with Canadian ICES-003.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

### **Concerning EVMs including radio transmitters**

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

### **Concerning EVMs including detachable antennas**

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that necessary for successful communication.

This radio transmitter has been approved by Industry Canada to operate with the antenna types listed in the user guide with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

Cet appareil numérique de la classe A ou B est conforme à la norme NMB-003 du Canada.

Les changements ou les modifications pas expressément approuvés par la partie responsable de la conformité ont pu vider l'autorité de l'utilisateur pour actionner l'équipement.

### **Concernant les EVMs avec appareils radio**

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

### **Concernant les EVMs avec antennes détachables**

Conformément à la réglementation d'Industrie Canada, le présent émetteur radio peut fonctionner avec une antenne d'un type et d'un gain maximal (ou inférieur) approuvé pour l'émetteur par Industrie Canada. Dans le but de réduire les risques de brouillage radioélectrique à l'intention des autres utilisateurs, il faut choisir le type d'antenne et son gain de sorte que la puissance isotrope rayonnée équivalente (p.i.r.e.) ne dépasse pas l'intensité nécessaire à l'établissement d'une communication satisfaisante.

Le présent émetteur radio a été approuvé par Industrie Canada pour fonctionner avec les types d'antenne énumérés dans le manuel d'usage et ayant un gain admissible maximal et l'impédance requise pour chaque type d'antenne. Les types d'antenne non inclus dans cette liste, ou dont le gain est supérieur au gain maximal indiqué, sont strictement interdits pour l'exploitation de l'émetteur.

## **【Important Notice for Users of this Product in Japan】**

### **This development kit is NOT certified as Confirming to Technical Regulations of Radio Law of Japan**

If you use this product in Japan, you are required by Radio Law of Japan to follow the instructions below with respect to this product:

1. Use this product in a shielded room or any other test facility as defined in the notification #173 issued by Ministry of Internal Affairs and Communications on March 28, 2006, based on Sub-section 1.1 of Article 6 of the Ministry's Rule for Enforcement of Radio Law of Japan,
2. Use this product only after you obtained the license of Test Radio Station as provided in Radio Law of Japan with respect to this product, or
3. Use of this product only after you obtained the Technical Regulations Conformity Certification as provided in Radio Law of Japan with respect to this product. Also, please do not transfer this product, unless you give the same notice above to the transferee. Please note that if you could not follow the instructions above, you will be subject to penalties of Radio Law of Japan.

**EVALUATION BOARD/KIT/MODULE (EVM)  
WARNINGS, RESTRICTIONS AND DISCLAIMERS**

---

**For Feasibility Evaluation Only, in Laboratory/Development Environments.** Unless otherwise indicated, this EVM is not a finished electrical equipment and not intended for consumer use. It is intended solely for use for preliminary feasibility evaluation in laboratory/development environments by technically qualified electronics experts who are familiar with the dangers and application risks associated with handling electrical mechanical components, systems and subsystems. It should not be used as all or part of a finished end product.

Your Sole Responsibility and Risk. You acknowledge, represent and agree that:

1. You have unique knowledge concerning Federal, State and local regulatory requirements (including but not limited to Food and Drug Administration regulations, if applicable) which relate to your products and which relate to your use (and/or that of your employees, affiliates, contractors or designees) of the EVM for evaluation, testing and other purposes.
2. You have full and exclusive responsibility to assure the safety and compliance of your products with all such laws and other applicable regulatory requirements, and also to assure the safety of any activities to be conducted by you and/or your employees, affiliates, contractors or designees, using the EVM. Further, you are responsible to assure that any interfaces (electronic and/or mechanical) between the EVM and any human body are designed with suitable isolation and means to safely limit accessible leakage currents to minimize the risk of electrical shock hazard.
3. You will employ reasonable safeguards to ensure that your use of the EVM will not result in any property damage, injury or death, even if the EVM should fail to perform as described or expected.
4. You will take care of proper disposal and recycling of the EVM's electronic components and packing materials.

**Certain Instructions.** It is important to operate this EVM within TI's recommended specifications and environmental considerations per the user guidelines. Exceeding the specified EVM ratings (including but not limited to input and output voltage, current, power, and environmental ranges) may cause property damage, personal injury or death. If there are questions concerning these ratings please contact a TI field representative prior to connecting interface electronics including input power and intended loads. Any loads applied outside of the specified output range may result in unintended and/or inaccurate operation and/or possible permanent damage to the EVM and/or interface electronics. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative. During normal operation, some circuit components may have case temperatures greater than 60°C as long as the input and output are maintained at a normal ambient operating temperature. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors which can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during normal operation, please be aware that these devices may be very warm to the touch. As with all electronic evaluation tools, only qualified personnel knowledgeable in electronic measurement and diagnostics normally found in development environments should use these EVMs.

**Agreement to Defend, Indemnify and Hold Harmless.** You agree to defend, indemnify and hold TI, its licensors and their representatives harmless from and against any and all claims, damages, losses, expenses, costs and liabilities (collectively, "Claims") arising out of or in connection with any use of the EVM that is not in accordance with the terms of the agreement. This obligation shall apply whether Claims arise under law of tort or contract or any other legal theory, and even if the EVM fails to perform as described or expected.

**Safety-Critical or Life-Critical Applications.** If you intend to evaluate the components for possible use in safety critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, such as devices which are classified as FDA Class III or similar classification, then you must specifically notify TI of such intent and enter into a separate Assurance and Indemnity Agreement.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
