

## DS9638QML RS-422 Dual High Speed Differential Line Driver

Check for Samples: [DS9638QML](#)

### FEATURES

- Single 5V Supply
- Schottky Technology
- TTL and CMOS Compatible Inputs
- Output Short Circuit Protection
- Input Clamp Diodes
- Complementary Outputs
- Minimum Output Skew (<1.0 ns Typical)
- 50 mA Output Drive Capability for 50Ω Transmission Lines
- Meets EIA RS-422 Specifications
- Propagation Delay of Less than 10 ns
- “Glitchless” Differential Output
- Delay Time Stable with V<sub>CC</sub> and Temperature

### Variations (<2.0 ns typical) (Figure 4)

- Extended Temperature Range

### DESCRIPTION

The DS9638 is a Schottky, TTL compatible, dual differential line driver designed specifically to meet the EIA Standard RS-422 specifications. It is designed to provide unipolar differential drive to twisted pair or parallel wire transmission lines. The inputs are TTL compatible. The outputs are similar to totem pole TTL outputs, with active pull-up and pull-down. The device features a short circuit protected active pull-up with low output impedance and is specified to drive 50Ω transmission lines at high speed. The mini-CDIP provides high package density.

### Connection Diagram

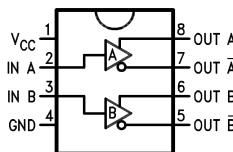

Figure 1. 8-Lead CDIP, Top View

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

**Absolute Maximum Ratings<sup>(1)</sup>**

|  |                                  |                 |
|--|----------------------------------|-----------------|
| Storage Temperature Range                        | Ceramic DIP                      | -65°C to +175°C |
| Lead Temperature                                 | Ceramic DIP (Soldering, 60 sec.) | 300°C           |
| Maximum Power Dissipation at 25°C <sup>(2)</sup> | Cavity Package                   | 1300 mW         |
| V <sub>CC</sub> Lead Potential to Ground         |                                  | -5V to 7V       |
| Input Voltage                                    |                                  | -0.5V to +7V    |

(1) "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be ensured. They are not meant to imply that the devices should be operated at these limits. The tables of "Electrical Characteristics" provide conditions for actual device operation.

(2) Derate cavity package 8.7 mW/°C above 25°C.

**Recommended Operating Conditions**

| DS9638J/883                             | Min | Max | Units |
|---|-----|-----|-------|
| Supply Voltage (V <sub>CC</sub> )       | 4.5 | 5.5 | V     |
| Output Current HIGH (I <sub>OH</sub> )  |     | -50 | mA    |
| Output Current LOW (I <sub>OL</sub> )   |     | 50  | mA    |
| Operating Temperature (T <sub>A</sub> ) | -55 | 125 | °C    |

**Quality Conformance Inspection**

<sup>(1)</sup> **Status:** For more details on status, see our [product life cycle](#).

<sup>(2)</sup> **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

<sup>(3)</sup> **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

<sup>(4)</sup> **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

<sup>(5)</sup> **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

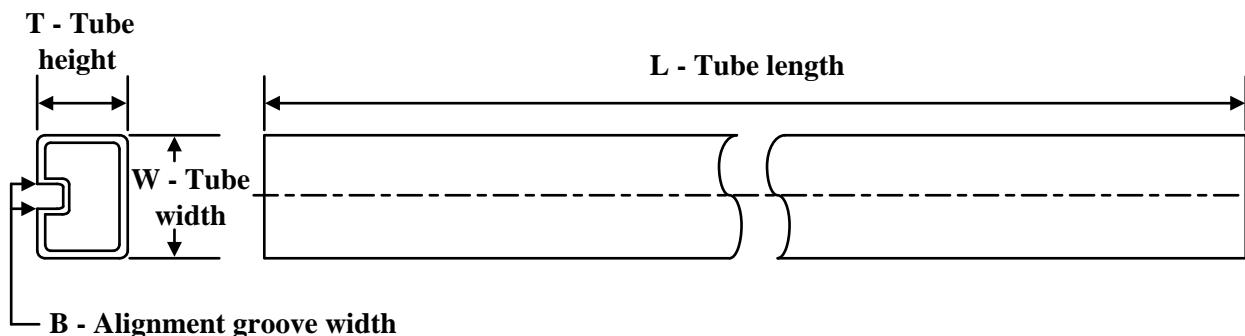

<sup>(6)</sup> **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
