

## TMP20 $\pm 2.5^{\circ}\text{C}$ Low-Power, Analog Out Temperature Sensor

### 1 Features

- $\pm 2.5^{\circ}\text{C}$  Accuracy from  $-55^{\circ}\text{C}$  to  $+130^{\circ}\text{C}$
- Supply Voltage Range: 1.8 V to 5.5 V
- Low Power: 4  $\mu\text{A}$  (Maximum)
- *MicroSize* Packages: SOT-563, SC70-5
- SC70 Pin-Compatible With LM20

### 2 Applications

- Cell Phones
- Desktop and Notebook Computers
- Portable Devices
- Consumer Electronics
- Battery Management
- Power Supplies
- HVAC
- Thermal Monitoring
- Disk Drives
- Appliances and White Goods
- Automotive

### 3 Description

The TMP20 device is a CMOS, precision analog output temperature sensor available in the tiny SOT-563 package. The TMP20 operates from  $-55^{\circ}\text{C}$  to  $+130^{\circ}\text{C}$  on a supply voltage of 2.7 V to 5.5 V with a supply current of 4  $\mu\text{A}$ . Operation as low as 1.8 V is possible for temperatures between  $15^{\circ}\text{C}$  and  $130^{\circ}\text{C}$ . The linear transfer function has a slope of  $-11.77$  mV/ $^{\circ}\text{C}$  (typical) and an output voltage of 1.8639 V (typical) at  $0^{\circ}\text{C}$ . The TMP20 has a  $\pm 2.5^{\circ}\text{C}$  accuracy across the entire specified temperature range of  $-55^{\circ}\text{C}$  to  $+130^{\circ}\text{C}$ .

The 4- $\mu\text{A}$  (maximum) supply current of the TMP20 limits self-heating of the device to less than  $0.01^{\circ}\text{C}$ . When  $V_{+}$  is less than 0.5 V, the device is in shutdown mode and consumes less than 20 nA (typical).

The TMP20 is available in a 5-lead SC70 or 6-lead SOT-563 package that reduces the overall required board space.

#### Device Information<sup>(1)</sup>

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TMP20	SOT-563 (6)	1.60 mm x 1.20 mm
	SC70 (5)	2.00 mm x 1.25 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

• Reformatted equations in <i>Transfer Function</i> section .....	9
• Corrected <a href="#">Equation 2</a> in <i>Transfer Function</i> section .....	9
• Added copyright notices to <a href="#">Figure 15</a> and <a href="#">Figure 16</a> .....	14

## 5 Pin Configuration and Functions

NC- no internal connection

### Pin Functions

NAME	PIN		I/O	DESCRIPTION
	DRL (SOT-563)	DCK (SC70)		
GND	6	5	—	Ground pin
NC	1	1	—	This pin must be grounded or left floating. See <a href="#">Layout Example</a> for more information.
NC / GND	2, 5	2	—	This pin must be grounded or left floating. For best thermal response, connect to GND plane. See <a href="#">Layout Example</a> for more information.
V <sub>OUT</sub>	3	3	O	Analog output
V+	4	4	I	Positive supply voltage

## 6 Specifications

### 6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

	MIN	MAX	UNIT
Supply voltage, V+		7	V
Operating temperature	–55	150	°C
Junction temperature, T <sub>J(max)</sub>		150	°C
Storage temperature, T <sub>stg</sub>	–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 6.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub> Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±4000	V
	Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000	
	Machine model (MM)	±200	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V <sub>DD</sub>	Supply voltage range	1.8	5.5	V
T <sub>A</sub>	Specified temperature range	–55	130	°C

### 6.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TMP20		UNIT
		DRL (SOT563)	DCK (SC70)	
		6 PINS	5 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	238	185	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	253	263.3	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	126.4	76.2	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	126	51.3	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	13	1.1	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	125.9	50.6	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

## 6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>TEMPERATURE MEASUREMENT <sup>(1)</sup></b>						
	Accuracy <sup>(2)</sup>	$T_A = -55^{\circ}\text{C to } 130^{\circ}\text{C}$	-2.5		2.5	$^{\circ}\text{C}$

	Maximum capacitive load		1			$\text{nF}$
<b>POWER SUPPLY</b>						
$V_S$	Specified voltage	$T_A = -55^{\circ}\text{C to } 130^{\circ}\text{C}$	2.7		5.5	$\text{V}$
		$T_A = 15^{\circ}\text{C to } 130^{\circ}\text{C}^{(6)}$	1.8		5.5	
$I_Q$	Quiescent current	$V_+ = 5.5\text{ V}$ $T_A = 25^{\circ}\text{C}$		2.6	4	$\mu\text{A}$
	Over temperature	$V_+ = 5.5\text{ V}$ $T_A = -55^{\circ}\text{C to } 130^{\circ}\text{C}$			6	$\mu\text{A}$
$I_{SD}$	Shutdown current	$V_+ < 0.5\text{ V}$		20		$\text{nA}$
<b>TEMPERATURE RANGE</b>						
	Specified operating	$T_A = -55^{\circ}\text{C to } 130^{\circ}\text{C}$	-55		130	$^{\circ}\text{C}$
		$T_A = 15^{\circ}\text{C to } 130^{\circ}\text{C}^{(6)}$	15		130	$^{\circ}\text{C}$
	Operating range	$V_+ = 2.7\text{ V to } 5.5\text{ V}$	-55		150	$^{\circ}\text{C}$
$\theta_{JA}$	Thermal resistance	SC70		185		$^{\circ}\text{C/W}$
		SOT-563		238		$^{\circ}\text{C/W}$
	Self-heating	SC70			0.01	$^{\circ}\text{C}$
		SOT-563			0.01	$^{\circ}\text{C}$

(1) 100% production tested at  $T_A = 25^{\circ}\text{C}$ . Specifications over temperature range are assured by design.

(2) Power-supply rejection is encompassed in the accuracy specification.

(3) Temperature sensitivity is the average slope to the equation  $V_O = (-11.77 \times T) + 1.860\text{ V}$ .

(4)  $V_{OUT}$  is calculated from temperature with the following equation:

$$V_O = (-3.88 \times 10^{-6} \times T^2) + (-1.15 \times 10^{-2} \times T) + 1.8639\text{ V},$$

where T is in  $^{\circ}\text{C}$ .

(5) Nonlinearity is the deviation of the calculated output voltage from the best fit straight line.

(6) The TMP20 transfer function requires the output voltage to rise above the 1.8-V supply as the temperature decreases below  $15^{\circ}\text{C}$ . When operating at a 1.8-V supply, it is normal for the TMP20 output to approach 1.8 V and remain at that voltage as the temperature continues to decrease below  $15^{\circ}\text{C}$ . This condition does not damage the device. Once the temperature rises above  $15^{\circ}\text{C}$ , the output voltage resumes changing as the temperature changes, according to the transfer function specified in this document. For more information about the transfer function, see [Transfer Function](#).

## 7 Detailed Description

### 7.1 Overview

The TMP20 device is a precision analog output temperature sensor. The temperature range of operation is  $-55^{\circ}\text{C}$  to  $+130^{\circ}\text{C}$  with supply voltages of 2.7 V to 5.5 V. The TMP20 operates from power-supply voltages as low as 1.8 V over a temperature range of  $15^{\circ}\text{C}$  to  $130^{\circ}\text{C}$ .

TI recommends power supply bypassing; use a 100-nF capacitor placed as closely as possible to the supply pin.

### 7.2 Functional Block Diagram

## 7.3 Feature Description

### 7.3.1 Transfer Function

The analog output of the TMP20 over the  $-55^{\circ}\text{C}$  to  $+130^{\circ}\text{C}$  temperature range corresponds to the parabolic transfer function shown in

[Added Receiving Notification of Documentation Updates section:](#)

$$V_{\text{OUT}} = \left(-3.88 \times 10^{-6} \times T^2\right) + \left(-1.15 \times 10^{-2} \times T\right) + 1.8639 \text{ V}$$

Where:

- the temperature (T) is in  $^{\circ}\text{C}$ . (1)

When solving for temperature, the equation is shown as [Equation 2:](#)

$$T = -1481.96 + \sqrt{2.1962 \times 10^6 + \frac{(1.8639 - V_{\text{O}})}{3.88 \times 10^{-6}}} \quad (2)$$

These equations apply over the entire operating range of  $-55^{\circ}\text{C}$  to  $+130^{\circ}\text{C}$ .

A simplified linear transfer function referenced at  $25^{\circ}\text{C}$  is shown in [Equation 3:](#)

$$V_{\text{OUT}} = -11.69 \text{ mV} / ^{\circ}\text{C} \times T + 1.8863 \text{ V} \quad (3)$$

Linear transfer functions are calculated for limited temperature ranges by calculating the slope and offset for that limited range, where slope is calculated by [Equation 4:](#)

$$m = -7.76 \times 10^{-6} \times T - 0.0115$$

Where:

- T equals the temperature at the middle of the temperature range of interest (4)

The offset in the linear transfer function is calculated with [Equation 5:](#)

$$b = \left(V_{\text{OUT}}(T_{\text{MAX}}) + V_{\text{OUT}}(T) - m \times (T_{\text{MAX}} + T)\right) / 2$$

where

- $V_{\text{OUT}}(T_{\text{MAX}})$  is the calculated output voltage at  $T_{\text{MAX}}$  as determined from [Added Receiving Notification of Documentation Updates section.](#) (5)

$V_{\text{OUT}}(T)$  is the calculated output voltage at T as calculated by [Added Receiving Notification of Documentation Updates section.](#)

#### 7.3.1.1 Example 1

Determine the linear transfer function for  $-40^{\circ}\text{C}$  to  $+110^{\circ}\text{C}$ .

$T_{\text{MIN}} = -40^{\circ}\text{C}$ ;  $T_{\text{MAX}} = 110^{\circ}\text{C}$ ; therefore,  $T = 35^{\circ}\text{C}$

$$m = -11.77 \text{ mV} / ^{\circ}\text{C}$$

$$V_{\text{OUT}}(110^{\circ}\text{C}) = 0.5520 \text{ V}$$

$$V_{\text{OUT}}(35^{\circ}\text{C}) = 1.4566 \text{ V}$$

$$b = 1.8576 \text{ V}$$

The linear transfer function for  $-40^{\circ}\text{C}$  to  $+110^{\circ}\text{C}$  is shown in [Equation 6:](#)

$$V_{\text{OUT}} = -11.77 \text{ mV} / ^{\circ}\text{C} \times T + 1.8576 \text{ V} \quad (6)$$

## Feature Description (continued)

Table 1 lists common temperature ranges of interest and the corresponding linear transfer functions for these ranges. Note that the error (maximum deviation) of the linear equation from the parabolic equation increases as the temperature ranges widen.

**Table 1. Common Temperature Ranges and Corresponding Linear Transfer Functions**

TEMPERATURE RANGE		LINEAR EQUATION (V)	MAXIMUM DEVIATION OF LINEAR EQUATION FROM PARABOLIC EQUATION (°C)
T <sub>MIN</sub> (°C)	T <sub>MAX</sub> (°C)		
-55	130	$V_{OUT} = -11.79 \text{ mV/}^\circ\text{C} \times T + 1.8528$	±1.41
-40	110	$V_{OUT} = -11.77 \text{ mV/}^\circ\text{C} \times T + 1.8577$	±0.93
-30	100	$V_{OUT} = -11.77 \text{ mV/}^\circ\text{C} \times T + 1.8605$	±0.70
-40	85	$V_{OUT} = -11.67 \text{ mV/}^\circ\text{C} \times T + 1.8583$	±0.65
-10	65	$V_{OUT} = -11.71 \text{ mV/}^\circ\text{C} \times T + 1.8641$	±0.23
35	45	$V_{OUT} = -11.81 \text{ mV/}^\circ\text{C} \times T + 1.8701$	±0.004
20	30	$V_{OUT} = -11.69 \text{ mV/}^\circ\text{C} \times T + 1.8663$	±0.004

## 7.4 Device Functional Modes

The singular functional mode of the TMP20 is an analog output inversely proportional to temperature.

## 8 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 8.1 Application Information

#### 8.1.1 Output Drive and Capacitive Loads

When used in noisy environments, adding a capacitor from the output to ground with a series resistor filters the TMP20 output; this configuration is shown in Figure 11. The TMP20 can drive up to 1 nF of load capacitance while sourcing and sinking 600  $\mu$ A. Under this condition, capacitive loads in the range of 1 nF to 10  $\mu$ F require a 150- $\Omega$  series output resistor to achieve a stable temperature measurement. The output impedance of the TMP20 is typically 10  $\Omega$  when sinking currents and less than 1  $\Omega$  when sourcing current, as shown in Figure 1.

Copyright © 2017, Texas Instruments Incorporated

(1) A series resistor (R) may be required depending upon the amount of capacitance (C) and the amount of source and sink current drawn from the output of the TMP20.

**Figure 11. TMP20 Output Filtering**

## 8.2 Typical Application

Copyright © 2017, Texas Instruments Incorporated

**Figure 12. Suggested Connections to a MCU ADC**

### 8.2.1 Design Requirements

ADCs that are found in microcontrollers (such as the MSP430 line of microcontrollers) take charge during the sampling phase. A high sampling frequency results in too much charge pulled into the ADC and sags the output voltage of the TMP20, which results in a reading that is hotter than normal. To mitigate this, place a capacitor ( $C_F$ ) between the TMP20 and the ADC. The capacitor functions as a charge reservoir.

### 8.2.2 Detailed Design Procedure

The size of  $C_F$  depends on the size of the internal sampling capacitor and the sampling frequency. The charge requirements may vary because not all ADCs have identical input stages. This general ADC application is shown as an example only.

### 8.2.3 Application Curves

Figure 13 shows the quiescent current versus temperature.

**Figure 13. Quiescent Current vs Temperature**

## 9 Power Supply Recommendations

The low supply current and supply range of 1.8 V to 5.5 V enable the TMP20 to be powered from multiple supply sources.

Power supply bypassing is optional and is typically dependent on the noise of the power supply. In noisy systems, adding bypass capacitors may be necessary to decrease the noise that couples to the output of the TMP20.

## 10 Layout

### 10.1 Layout Guidelines

The substrate on the TMP20AIDCK package is directly connected through conductive epoxy to the flag that connects pin 2 on the lead frame. Consequently, pin 2 is the best lead for a conductive thermal connection to the TMP20 die. The optimal electrical connection for this pin is ground (GND).

#### CAUTION

Do not attempt to connect pin 2 (DCK package) to any electrical potential other than ground.

If it is not possible to connect pin 2 to ground, it is possible to electrically isolate this pin (that is, leave it floating). Take care when electrically isolating this pin because any noise or electromagnetic interference or radio frequency interference (EMI or RFI) spikes that couple in through this pin can cause erroneous temperature results.

shows a proper layout of the TMP20 with correct electrical and thermal connections to pin 2.

### 10.2 Layout Example

Figure 14 shows a layout of the TMP20 with proper electrical and thermal connections to pin 2.

Figure 14. TMP20 Layout With Proper Electrical and Thermal Connections

## 11 Device and Documentation Support

### 11.1 Device Support

#### 11.1.1 TINA-TI (Free Download Software)

TINA is a simple, powerful, and easy-to-use circuit simulation program based on a SPICE engine. TINA-TI is a free, fully functional version of the TINA software, preloaded with a library of macromodels in addition to a range of passive and active models. It provides all the conventional dc, transient, and frequency domain analysis of SPICE and additional design capabilities.

Available as a free download from the [WEBENCH® Design Center](#), TINA-TI offers extensive post-processing capability that allows users to format results in a variety of ways.

Virtual instruments offer users the ability to select input waveforms and probe circuit nodes, voltages, and waveforms, creating a dynamic quick-start tool.

Figure 15 and Figure 16 show example TINA-TI circuits for the TMP20 that can develop, modify, and assess the circuit design for specific applications. Links to download these simulation files are given below.

##### 11.1.1.1 Using TINA-TI SPICE-Based Analog Simulation Program with the TMP20

**NOTE**

These files require that the TINA software (from DesignSoft) or TINA-TI software be installed. Download the free TINA-TI software from the [TINA-TI folder](#).

Copyright © 2017, Texas Instruments Incorporated

Note: The TMP20 TINA model is preliminary only.

**Figure 15. Analog Temperature Switch**

To download a compressed file that contains the TINA-TI simulation file for this circuit, visit the [WEBENCH® Design Center](#).

Device Support (continued)

Copyright © 2017, Texas Instruments Incorporated

- (1) The TMP20 TINA model is preliminary only.
- (2) Parameters and definitions:
  - a.  $T_{object}$  = Temperature of the object to be cooled (in °C)
  - b.  $V_{set}$  = Voltage that corresponds to the desired output temperature from the TMP20
  - c.  $VTEMP$  = Voltage output of the TMP20
  - d. Hotplate = TEC plate on opposite side of object
  - e. Coldplate = TEC plate in contact with object
- (3) In this configuration, the TEC driver can cool to  $-T^{\circ}C$  and heating to  $41^{\circ}C$ ; the  $V_{set}$  range is 1.38 V to 1.95 V. The OPA569 device outputs =  $\pm 1.65$  A,  $\pm 0.5$  V to  $\pm 4.5$  V. The 10-M $\Omega$  resistors are for TINA convergence.
- (4) For convergence in TINA software: In **Analysis/Set Analysis Parameters** menu, set *shunt conductance* = 1 p.

TMP20AIDRLT	ACTIVE	SOT-5X3	DRL	6	250	RoHS & Green	NIPDAUAG	Level-1-260C-UNLIM	-55 to 125	ODA	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and

continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DCK (R-PDSO-G5)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - D. Falls within JEDEC MO-203 variation AA.

DCK (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - Publication IPC-7351 is recommended for alternate designs.
  - Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

## SOT - 0.6 mm max height

PLASTIC SMALL OUTLINE

4223266/C 12/2021

### NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. Reference JEDEC registration MO-293 Variation UAAD
