

TL77xxA Supply-Voltage Supervisors

1 Features

- Power-On Reset Generator
- Automatic Reset Generation After Voltage Drop
- Wide Supply-Voltage Range
- Precision Voltage Sensor
- Temperature-Compensated Voltage Reference
- Externally Adjustable Pulse Duration

2 Applications

- Computers
- Tablets
- Smart Phones
- Servers
- Music Players

3 Description

The TL77xxA family of integrated-circuit supply-voltage supervisors is designed specifically for use as reset controllers in microcomputer and microprocessor systems. The supply-voltage supervisor monitors the supply for undervoltage conditions at the SENSE input. During power up, the RESET output becomes active (low) when V_{CC} attains a value approaching 3.6 V. At this point (assuming that SENSE is above V_{IT+}), the delay timer function activates a time delay, after which outputs $\overline{\text{RESET}}$ and RESET go inactive (high and low, respectively). When an undervoltage condition occurs during normal operation, $\overline{\text{RESET}}$ and RESET go active.

Device Information⁽¹⁾

| PART NUMBER | PACKAGE | BODY SIZE (NOM) |
|-------------|----------|-------------------|
| TL77xxA | SOIC (8) | 4.90 mm x 3.91 mm |
| | PDIP (8) | 9.81 mm x 6.35 mm |
| TL7705A | SO (8) | 6.20 mm x 5.30 mm |

6 Specifications

6.1 Absolute Maximum Ratings

 over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

| | | MIN | MAX | UNIT | |
|------------------|--|------------------------|------|------|---|
| V _{CC} | Supply voltage ⁽²⁾ | | 20 | V | |
| V _I | Input voltage, $\overline{\text{RESIN}}$ | -0.3 | 20 | V | |
| V _I | Input voltage range SENSE | TL7702A ⁽³⁾ | -0.3 | 6 | V |
| | | TL7705A | -0.3 | 20 | V |
| | | TL7709A | -0.3 | 20 | V |
| | | TL7712A, TL7715A | -0.3 | 20 | V |
| I _{OH} | High-level output current, I _{OH} , $\overline{\text{RESET}}$ | | -30 | mA | |
| I _{OL} | Low-level output current, I _{OL} , $\overline{\text{RESET}}$ | | 30 | mA | |
| T _J | Operating virtual junction temperature | | 150 | °C | |
| T _{stg} | Storage temperature | -65 | 150 | °C | |

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) For proper operation of the TL7702A, the voltage applied to the SENSE terminal should not exceed V_{CC} - 1 V or 6 V, whichever is less.
- (3) All voltage values are with respect to GND.

6.2 ESD Ratings

| | | VALUE | UNIT |
|--------------------|-------------------------|--|------|
| V _(ESD) | Electrostatic discharge | Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾ | 1000 |
| | | Charged device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾ | 1000 |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

| | | MIN | MAX | UNIT | |
|-----------------|---|----------|-----|--------------------|----|
| V _{CC} | Supply Voltage | 3.5 | 18 | V | |
| V _{IH} | High-level input voltage at $\overline{\text{RESIN}}$ | 2 | | V | |
| V _{IL} | Low-level input voltage at $\overline{\text{RESIN}}$ | | 0.6 | V | |
| V _I | Input voltage, SENSE | TL7702A | 0 | See ⁽¹⁾ | V |
| | | TL7705A | 0 | 10 | |
| | | TL7709A | 0 | 15 | |
| | | TL7712A | 0 | 20 | |
| | | TL7715A | 0 | 20 | |
| I _{OH} | High-level output current, $\overline{\text{RESET}}$ | | -16 | mA | |
| I _{OL} | Low-level output current, $\overline{\text{RESET}}$ | | 16 | mA | |
| T _A | Operating free-air temperature | TL77xxAC | 0 | 70 | °C |
| | | TL77xxAI | -40 | 85 | |

- (1) For proper operation of the TL7702A, the voltage applied to the SENSE terminal should not exceed V_{CC} - 1 V or 6 V, whichever is less.

6.4 Thermal Information

| THERMAL METRIC ⁽¹⁾ | TL77xxA | | | UNIT |
|---|---------|--------|--------|------|
| | D | P | PS | |
| | 8 PINS | 8 PINS | 8 PINS | |
| R _{θJA} Junction-to-ambient thermal resistance | 97 | 85 | 95 | °C/W |

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

| I _i Input current | RESIN | V _I = 2.4 V to V _{CC} | | 20 | μA |
| | | V _I = 0.4 V | | -100 | |
| | SENSE TL7702A | V _{ref} < V _I < V _{CC} - 1.5 V | | 0.5 | |
| I _{OH} High-level output current, RESET | V _O = 18 V | 50 | | | μA |
| I _{OL} Low-level output current, RESET | V _O = 0 | -50 | | | μA |
| I _{CC} Supply current | All inputs and outputs open | 1.8 | | 3 | mA |

(1) All electrical characteristics are measured with 0.1-μF capacitors connected at REF, CT, and V_{CC} to GND.

6.6 Switching Characteristics

over operating free-air temperature range (unless otherwise noted)

| PARAMETER | TEST CONDITIONS ⁽¹⁾ | TL77xxAC TL77xxAI | | | UNIT | |
|---|--|--------------------------------------|-----|-----|------|----|
| | | MIN | TYP | MAX | | |
| Output pulse duration | CT = 0.1 μF | 0.65 | 1.2 | 2.6 | msec | |
| Input pulse duration at RESIN | | 0.4 | | | μs | |
| t _{w(S)} Pulse duration at sense input to switch outputs | V _{IH} = V _{IT-} + 200 mV, V _{IL} = V _{IT-} - 200 mV | 2 | | | μs | |
| t _{pd} propagation delay time, RESIN to RESET | V _{CC} = 5V | 1 | | | μs | |
| t _r Rise time | RESET | V _{CC} = 5 V ⁽²⁾ | | | 0.2 | μs |
| | RESET | | | | 3.5 | |
| t _f Fall time | RESET | V _{CC} = 5 V ⁽²⁾ | | | 3.5 | μs |
| | RESET | | | | 0.2 | |

(1) All switching characteristics are measured with 0.1-μF capacitors connected at REF and V_{CC} to GND.

(2) The rise and fall times are measured with a 4.7-kΩ load resistor at RESET and RESET.

8 Detailed Description

8.1 Overview

The TL77xxA family of integrated-circuit supply-voltage supervisors is designed specifically for use as reset controllers in microcomputer and microprocessor systems. The supply-voltage supervisor monitors the supply for undervoltage conditions at the SENSE input. During power up, the RESET output becomes active (low) when V_{CC} attains a value approaching 3.6 V. At this point (assuming that SENSE is above V_{IT+}), the delay timer function activates a time delay, after which outputs $\overline{\text{RESET}}$ and RESET go inactive (high and low, respectively). When an undervoltage condition occurs during normal operation, $\overline{\text{RESET}}$ and RESET go active. To ensure that a complete reset occurs, the reset outputs remain active for a time delay after the voltage at the SENSE input exceeds the positive-going threshold value.

During power down and when SENSE is below V_{IT-} , the outputs remain active until V_{CC} falls below 2 V. After this, the outputs are undefined. An external capacitor (typically 0.1 μF) must be connected to REF to reduce the influence of fast transients in the supply voltage.

Five versions of this circuit are available:

- TL7705A ($V_t = 4.55 \text{ V}$): Application in TTL-systems and microcomputer systems which require a 5 volt supply (for example, TMS7000)
- TL7709A ($V_t = 7.6 \text{ V}$): Application in microcomputer systems using the TMS1XXXNLL
- TL7712A ($V_t = 10.8 \text{ V}$): Application in CMOS, microprocessor, and memory circuits with a 12 volt supply.
- TL7715A ($V_t = 13.5 \text{ V}$): Application in circuits which operate with a supply voltage of 15 V, as is found often in analog circuits.
- TL7702A ($V_t = 2.5 \text{ V}$): Application in systems where other supply voltages are used. The required trigger level may be adjusted with an external resistor divider at the SENSE input.

8.2 Functional Block Diagram

The functional block diagram is shown for illustrative purposes only; the actual circuit includes a trimming network to adjust the reference voltage and sense-comparator trip point.

- A. TL7702A: $R1 = 0 \Omega$, $R2 = \text{open}$
 TL7705A: $R1 = 7.8 \text{ k}\Omega$, $R2 = 10 \text{ k}\Omega$
 TL7709A: $R1 = 19.7 \text{ k}\Omega$, $R2 = 10 \text{ k}\Omega$
 TL7712A: $R1 = 32.7 \text{ k}\Omega$, $R2 = 10 \text{ k}\Omega$
 TL7715A: $R1 = 43.4 \text{ k}\Omega$, $R2 = 10 \text{ k}\Omega$
- B. Resistor values shown are nominal.

8.3 Feature Description

8.3.1 Wide Supply-Voltage Range

The TL77xxA family operates over a wide supply voltage range of 3.5 V to 18 V.

8.3.2 Externally Adjustable Pulse Duration

The time delay is determined by the value of the external capacitor C_T : $t_d = 1.3 \times 10^4 \times C_T$, where C_T is in farads (F) and t_d is in seconds (s).

8.3.3 Temperature-Compensated Voltage Reference

The series TL77xxA incorporates an extremely stable reference voltage source. This voltage source can also be used in applications where a constant voltage source is required. The reference voltage varies less than 10 mV over the supply voltage range of 3.5 V to 18 V. The same stability of the reference voltage is maintained, when the ambient temperature is changed. The reference's voltage varies only 16 mV when the ambient temperature is changed from -40°C to $+85^\circ\text{C}$.

8.4 Device Functional Modes

Figure 7 shows the timing of the various signals. In this example the SENSE input is connected to the supply voltage V_{CC} as in typical applications of this device. The minimum supply voltage for which the function of this device is guaranteed is 3.6 V. After power-on, the outputs are undefined until the minimum supply voltage V_{res} is reached. For the TL77xxA the minimum supply voltage is $V_{res} = 3\text{ V}$ (typical 2.5 V). Beyond the voltage V_{res} the capacitor C_T is first kept discharged, and the outputs stay in the active state (RESET = High, RESET = Low). When the input voltage becomes higher than the threshold voltage V_t , the thyristor is turned off and the capacitor is charged. After a delay, t_d , the voltage at the capacitor passes the trigger level of the output comparator and the outputs become inactive. The circuit to be initialized is now set to a defined state and starts the correct operation.

A. Note: SENSE Input connected to V_{CC}

Figure 7. Timing Diagram

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

This application shows the initialization circuit diagrams for a microprocessor system with supply voltage $V_{CC} = 5$ V. The external components required are the decoupling capacitor C_{ref} for the reference voltage and the timing capacitor C_T . The outputs of the TL77xxA are open collector outputs. In Figure 8 therefore a pull-up resistor is shown at the RESET output to ensure the correct HIGH level.

9.2 Typical Application

Figure 8. Reset Controller Schematic for a Microprocessor

9.2.1 Design Requirements

- 5-V microprocessor supply voltage
- $t_d = 1.3$ ms

9.2.2 Detailed Design Procedure

- Select reasonable values for pull-up/pull-down resistors for RESET and $\overline{\text{RESET}}$. This design uses 10 kΩ.
- Choose $C_T = 0.1$ μF to achieve $t_d = 1.3$ ms
- This design uses only the active-low reset output ($\overline{\text{RESET}}$) because the example microcontroller resets when the input is Low.

10 Power Supply Recommendations

The TL77xxA devices operate within the specifications from the [Recommended Operating Conditions](#) between 3.5 V and 18 V.

CAUTION

These devices risk being damaged when powered by more than 20 V.

11 Layout

11.1 Layout Guidelines

The voltage monitor should be placed on the printed circuit board, where there are no neighboring circuits in the which switch high currents (like bus interface circuits and power switches). When laying out the layout of the printed circuit board, take special care with the interconnects which carry analog signals. Beside the SENSE input these are the C_T and V_{ref} terminals. Noise coupled into the C_T input will lead to a reduction of the output pulse width. Noise coupled into the V_{ref} input or into the filter capacitor at this input may lead to undesired triggering of the circuit and by this to an undesired RESET pulse. Practice shows, that this malfunction when high currents flow over the interconnects of these capacitors to the GND terminal of the voltage monitor. To avoid these effects, the GND terminals of these capacitors must be connected by the shortest way to the GND terminal of the voltage monitor in so that no currents caused by other circuits flow over these wires. [Figure 16](#) show a layout proposal for the printed circuit board. Furthermore the resistors of the voltage divider at the SENSE input of the TL7702 (R2 and R3 in [Figure 16](#)) have to be placed in so, that no noise may be coupled into this circuit.

12.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

QUADRANT ASSIGNMENTS FOR PIN 1 ORIENTATION IN TAPE

D0008A

PACKAGE OUTLINE

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

4214825/C 02/2019

NOTES:

- Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 [0.15] per side.
- This dimension does not include interlead flash.
- Reference JEDEC registration MS-012, variation AA.

EXAMPLE BOARD LAYOUT

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

LAND PATTERN EXAMPLE
 EXPOSED METAL SHOWN
 SCALE:8X

SOLDER MASK DETAILS

4214825/C 02/2019

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

D0008A

SOIC - 1.75 mm max height

SMALL OUTLINE INTEGRATED CIRCUIT

SOLDER PASTE EXAMPLE
BASED ON .005 INCH [0.125 MM] THICK STENCIL
SCALE:8X

4214825/C 02/2019

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

MECHANICAL DATA

PS (R-PDSO-G8)

PLASTIC SMALL-OUTLINE PACKAGE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Body dimensions do not include mold flash or protrusion, not to exceed 0,15.

PS (R-PDSO-G8)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC-7525 for other stencil recommendations.
 - E. Customers should contact their board fabrication site for solder mask tolerances between and around signal pads.
