CDCS504-Q1 Clock Buffer and Clock Multiplier

1 Features

- Qualified for Automotive Applications
- AEC-Q100 Test Guidance With the Following Results:
  - Device Temperature Grade 2: −40°C to 105°C
  - Device HBM ESD Classification Level H2
  - Device CDM ESD Classification Level C3B
- Part of a Family of Easy-to-Use Clock Generator Devices
- Clock Multiplier With Selectable Output Frequency
- Frequency Multiplication Selectable Between x1 or x4 With One External Control Pin
- Output Disable Through Control Pin
- Single 3.3-V Device Power Supply
- Wide Temperature Range: −40°C to 105°C
- Low Space Consumption 8-Pin TSSOP Package
- Create a Custom Design Using the CDCS504-Q1 With the WEBENCH® Power Designer

2 Applications

Automotive Applications Requiring Clock Multiplication

3 Description

The CDCS504-Q1 device is a LVCMOS input clock buffer with selectable frequency multiplication. The CDCS504-Q1 has an output enable pin. The device accepts a 3.3-V LVCMOS signal at the input. The input signal is processed by a phased-locked loop (PLL), whose output frequency is either equal to the input frequency or multiplied by the factor of four. By this, the device can generate output frequencies between 2 MHz and 108 MHz. A separate control pin can be used to enable or disable the output. The CDCS504-Q1 device operates in a 3.3-V environment. It is characterized for operation from −40°C to 105°C and is available in an 8-pin TSSOP package.

8 Detailed Description

8.1 Overview
The CDCS504-Q1 is a LVCMOS clock buffer (x1 mode) or quadrupler (x4 mode). It integrates an internal PLL and generates a LVCMOS clock frequency range from 2 MHz to 108 MHz.

8.2 Functional Block Diagram

8.3 Feature Description
The CDCS504-Q1 is qualified for automotive applications with AEC-Q100 test, which could support wide temperature range from –40°C to 105°C. The device is easy to use, only need single 3.3-V power supply. The output enable or disable mode, along with frequency multiplication, could be controlled by external control pins.

8.4 Device Functional Modes
When pin 7 OE is in low, the CDCS504-Q1 outputs 3-state. When pin 7 OE is set in high, the device would output clocks, output frequency depends on pin 5 FS status. FS = high enables frequency ×4 mode. FS = low makes output frequency equal to input frequency. If no input clock is provided, it is recommended to set OE=low in order to avoid random clock pulses from the internal PLL at the outputs.

Table 1. Function Table
9 Application and Implementation

NOTE
Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI’s customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information
The CDCS504-Q1 is a clock buffer or multiplier for automotive amplifiers and infotainment. It is fit for the TAS6424-Q1, a four-channel, class-D, digital-input audio-amplifier, when the applications are without available MCLK. See Figure 6 for more details.

9.2 Typical Application

![Figure 6. Clock for Automotive Amplifiers](image.png)

9.2.1 Design Requirements
The CDCS504-Q1 is supplied with a single-power 3.3 V. The device supports minimum input frequency to 2 MHz. For maximum input frequency, it is 32 MHz in ×1 mode, and 27 MHz in ×4 mode. The input clock is LVCMOS type and should satisfy requirements in the Recommended Operating Conditions.

9.2.2 Detailed Design Procedure
In some applications, the clock input for CDCS504-Q1 is not always presented. In case there is an unexpected clock output without clock input, TI recommends setting OE pin to low. When it gets clock input ready, set OE pin to high to get expected clock output. If the other application presents continuous clock input for CDCS504-Q1, the OE pin could be floated, internal pullup brings output enable, or an external pullup circuits could be used fixedly.

9.2.2.1 Custom Design With WEBENCH® Tools
Click here to create a custom design using the CDCS504-Q1 device with the WEBENCH® Power Designer.
1. Start by entering the input voltage ($V_{IN}$), output voltage ($V_{OUT}$), and output current ($I_{OUT}$) requirements.
2. Optimize the design for key parameters such as efficiency, footprint, and cost using the optimizer dial.
3. Compare the generated design with other possible solutions from Texas Instruments.

The WEBENCH Power Designer provides a customized schematic along with a list of materials with real-time pricing and component availability.
**Typical Application (continued)**

In most cases, these actions are available:

- Run electrical simulations to see important waveforms and circuit performance
- Run thermal simulations to understand board thermal performance
- Export customized schematic and layout into popular CAD formats
- Print PDF reports for the design, and share the design with colleagues

Get more information about WEBENCH tools at [www.ti.com/WEBENCH](http://www.ti.com/WEBENCH).

**9.2.3 Application Curves**

![Typical Cycle-to-Cycle Jitter vs Temperature](image)

**Figure 7. Typical Cycle-to-Cycle Jitter vs Temperature**

X1 mode, 8-MHz input, 8-MHz output, VDD = 3.3 V

![Typical Cycle-to-Cycle Jitter vs Temperature](image)

**Figure 8. Typical Cycle-to-Cycle Jitter vs Temperature**

X4 mode, 27.5-MHz input, 110-MHz output, VDD = 3.3 V

**10 Power Supply Recommendations**

The CDCS504-Q1 requires a 3.3-V supply.

**11 Layout**

**11.1 Layout Guidelines**

The CDCS504-Q1 only has typical 20-mA supply current, so there is no thermal design challenge. A 0.01-µF capacitor may be placed close to VDD pin as a bypass capacitor.

**11.2 Layout Example**

![Layout Example](image)

12.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on Alert me to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

12.3 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

**TI E2E™ Online Community** TI's Engineer-to-Engineer (E2E) Community. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** TI's Design Support Quickly find helpful E2E forums along with design support tools and contact information for technical support.

12.4 Trademarks

E2E is a trademark of Texas Instruments.
WEBENCH is a registered trademark of Texas Instruments.
All other trademarks are the property of their respective owners.

12.5 Electrostatic Discharge Caution

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

12.6 Glossary

**SLYZ022 — TI Glossary.**
This glossary lists and explains terms, acronyms, and definitions.
13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

</tr>
</tbody>
</table>

(1) The marketing status values are defined as follows:

**ACTIVE**: Product device recommended for new designs.

**LIFEBUY**: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND**: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW**: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE**: TI has discontinued the production of the device.

(2) RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt**: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green**: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.  

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.
