

LM45 SOT-23 Precision Centigrade Temperature Sensors

Check for Samples: [LM45](#)

FEATURES

- **Calibrated Directly in ° Celsius (Centigrade)**
- **Linear + 10.0 mV/°C Scale Factor**
- **±3°C Accuracy Guaranteed**
- **Rated for Full –20° to +100°C Range**
- **Suitable for Remote Applications**
- **Low Cost Due to Wafer-Level Trimming**
- **Operates from 4.0V to 10V**
- **Less than 120 µA Current Drain**
- **Low Self-Heating, 0.20°C in Still Air**
- **Nonlinearity Only ±0.8°C Max Over Temp**
- **Low Impedance Output, 20Ω for 1 mA Load**

APPLICATIONS

- **Battery Management**
- **FAX Machines**
- **Printers**
- **Portable Medical Instruments**
- **HVAC**
- **Power Supply Modules**
- **Disk Drives**
- **Computers**
- **Automotive**

DESCRIPTION

The LM45 series are precision integrated-circuit temperature sensors, whose output voltage is linearly proportional to the Celsius (Centigrade) temperature. The LM45 does not require any external calibration or trimming to provide accuracies of ±2°C at room temperature and ±3°C over a full –20 to +100°C temperature range. Low cost is assured by trimming and calibration at the wafer level. The LM45's low output impedance, linear output, and precise inherent calibration make interfacing to readout or control circuitry especially easy. It can be used with a single power supply, or with plus and minus supplies. As it draws only 120 µA from its supply, it has very low self-heating, less than 0.2°C in still air. The LM45 is rated to operate over a –20° to +100°C temperature range.

Typical Applications

Figure 2. Basic Centigrade Temperature Sensor (+2.5°C to +100°C)

Choose $R_1 = -V_S/50 \mu\text{A}$
 $V_{\text{OUT}} = (10 \text{ mV}/^\circ\text{C} \times \text{Temp } ^\circ\text{C})$
 $V_{\text{OUT}} = +1,000 \text{ mV at } +100^\circ\text{C}$
 $= +250 \text{ mV at } +25^\circ\text{C}$
 $= -200 \text{ mV at } -20^\circ\text{C}$

Figure 3. Full-Range Centigrade Temperature Sensor (-20°C to +100°C)

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings⁽¹⁾

Supply Voltage		+12V to -0.2V
Output Voltage		+V _S + 0.6V to -1.0V
Output Current		10 mA
Storage Temperature		-65°C to +150°C
ESD Susceptibility ⁽²⁾	Human Body Model	2000V
	Machine Model	250V

(1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its rated operating conditions.

(2) Human body model, 100 pF discharged through a 1.5 kΩ resistor. Machine model, 200 pF discharged directly into each pin.

Operating Ratings⁽¹⁾⁽²⁾⁽³⁾

Specified Temperature Range ⁽⁴⁾		T _{MIN} to T _{MAX}
LM45B, LM45C		-20°C to +100°C
Operating Temperature Range		
LM45B, LM45C		-40°C to +125°C
Supply Voltage Range (+V _S)		+4.0V to +10V

(1) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. DC and AC electrical specifications do not apply when operating the device beyond its rated operating conditions.

(2) Soldering process must comply with Reflow Temperature Profile specifications. Refer to <http://www.ti.com/packaging>.

(3) Reflow temperature profiles are different for lead-free and non-lead-free packages.

(4) Thermal resistance of the SOT-23 package is 260°C/W, junction to ambient when attached to a printed circuit board with 2 oz. foil as shown in Figure 15.

Electrical Characteristics

Unless otherwise noted, these specifications apply for $+V_S = +5\text{Vdc}$ and $I_{\text{LOAD}} = +50\ \mu\text{A}$, in the circuit of [Figure 3](#). These specifications also apply from $+2.5^\circ\text{C}$ to T_{MAX} in the circuit of [Figure 2](#) for $+V_S = +5\text{Vdc}$. **Boldface limits apply for $T_A = T_J = T_{\text{MIN}}$ to T_{MAX}** ; all other limits $T_A = T_J = +25^\circ\text{C}$, unless otherwise noted.

Parameter	Conditions	LM45B		LM45C		Units (Limit)
		Typical	Limit ⁽¹⁾	Typical	Limit ⁽¹⁾	
Accuracy ⁽²⁾	$T_A = +25^\circ\text{C}$		± 2.0		± 3.0	$^\circ\text{C}$ (max)
	$T_A = T_{\text{MAX}}$		± 3.0		± 4.0	
	$T_A = T_{\text{MIN}}$		± 3.0		± 4.0	
Nonlinearity ⁽³⁾	$T_{\text{MIN}} \leq T_A \leq T_{\text{MAX}}$		± 0.8		± 0.8	$^\circ\text{C}$ (max)
Sensor Gain (Average Slope)	$T_{\text{MIN}} \leq T_A \leq T_{\text{MAX}}$		+9.7		+9.7	mV/ $^\circ\text{C}$ (min)
			+10.3		+10.3	mV/ $^\circ\text{C}$ (max)
Load Regulation ⁽⁴⁾	$0 \leq I_L \leq +1\ \text{mA}$		± 35		± 35	mV/mA (max)
Line Regulation ⁽⁴⁾	$+4.0\text{V} \leq +V_S \leq +10\text{V}$		± 0.80		± 0.80	mV/V (max)
			± 1.2		± 1.2	
Quiescent Current ⁽⁵⁾	$+4.0\text{V} \leq +V_S \leq +10\text{V}$, $+25^\circ\text{C}$		120		120	μA (max)
	$+4.0\text{V} \leq +V_S \leq +10\text{V}$		160		160	
Change of Quiescent Current ⁽⁵⁾	$4.0\text{V} \leq +V_S \leq 10\text{V}$		2.0		2.0	μA (max)
Temperature Coefficient of Quiescent Current			+2.0		+2.0	$\mu\text{A}/^\circ\text{C}$
Minimum Temperature for Rated Accuracy	In circuit of Figure 2 , $I_L = 0$		+2.5		+2.5	$^\circ\text{C}$ (min)
Long Term Stability ⁽⁶⁾	$T_J = T_{\text{MAX}}$, for 1000 hours		± 0.12		± 0.12	$^\circ\text{C}$

- (1) Limits are guaranteed to TI's AOQL (Average Outgoing Quality Level).
- (2) Accuracy is defined as the error between the output voltage and $10\ \text{mV}/^\circ\text{C}$ times the device's case temperature, at specified conditions of voltage, current, and temperature (expressed in $^\circ\text{C}$).
- (3) Nonlinearity is defined as the deviation of the output-voltage-versus-temperature curve from the best-fit straight line, over the device's rated temperature range.
- (4) Regulation is measured at constant junction temperature, using pulse testing with a low duty cycle. Changes in output due to heating effects can be computed by multiplying the internal dissipation by the thermal resistance.
- (5) Quiescent current is measured using the circuit of [Figure 2](#).
- (6) For best long-term stability, any precision circuit will give best results if the unit is aged at a warm temperature, and/or temperature cycled for at least 46 hours before long-term life test begins. This is especially true when a small (Surface-Mount) part is wave-soldered; allow time for stress relaxation to occur.

Typical Performance Characteristics

To generate these curves the LM45 was mounted to a printed circuit board as shown in [Figure 15](#).

PRINTED CIRCUIT BOARD

Printed Circuit Board Used for Heat Sink to Generate All Curves.

Figure 15. 1/2" Square Printed Circuit Board with 2 oz. Foil or Similar

APPLICATIONS

The LM45 can be applied easily in the same way as other integrated-circuit temperature sensors. It can be glued or cemented to a surface and its temperature will be within about 0.2°C of the surface temperature.

This presumes that the ambient air temperature is almost the same as the surface temperature; if the air temperature were much higher or lower than the surface temperature, the actual temperature of the LM45 die would be at an intermediate temperature between the surface temperature and the air temperature.

To ensure good thermal conductivity the backside of the LM45 die is directly attached to the GND pin. The lands and traces to the LM45 will, of course, be part of the printed circuit board, which is the object whose temperature is being measured. These printed circuit board lands and traces will not cause the LM45s temperature to deviate from the desired temperature.

Alternatively, the LM45 can be mounted inside a sealed-end metal tube, and can then be dipped into a bath or screwed into a threaded hole in a tank. As with any IC, the LM45 and accompanying wiring and circuits must be kept insulated and dry, to avoid leakage and corrosion. This is especially true if the circuit may operate at cold temperatures where condensation can occur. Printed-circuit coatings and varnishes such as Humiseal and epoxy paints or dips are often used to insure that moisture cannot corrode the LM45 or its connections.

Temperature Rise of LM45 Due to Self-Heating (Thermal Resistance)

	SOT-23	SOT-23
	no heat sink*	small heat fin**
Still air	450°C/W	260°C/W
Moving air		180°C/W

Typical Applications

CAPACITIVE LOADS

Like most micropower circuits, the LM45 has a limited ability to drive heavy capacitive loads. The LM45 by itself is able to drive 500 pF without special precautions. If heavier loads are anticipated, it is easy to isolate or decouple the load with a resistor; see [Figure 16](#). Or you can improve the tolerance of capacitance with a series R-C damper from output to ground; see [Figure 17](#).

Any linear circuit connected to wires in a hostile environment can have its performance affected adversely by intense electromagnetic sources such as relays, radio transmitters, motors with arcing brushes, SCR transients, etc, as its wiring can act as a receiving antenna and its internal junctions can act as rectifiers. For best results in such cases, a bypass capacitor from V_{IN} to ground and a series R-C damper such as 75Ω in series with 0.2 or 1 μF from output to ground, as shown in [Figure 17](#), are often useful.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) **MSL, Peak Temp.** - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) **Lead finish/Ball material** - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
