## description

The SN74BCT29854 is an 8-bit to 9-bit parity transceiver designed for asynchronous communication between data buses. When data is transmitted from the A to B bus, a parity bit is generated. When data is transmitted from the B to A bus with its corresponding parity bit, the parity-error ( $\overline{ERR}$ ) output will indicate whether or not an error in the B data has occurred. The output-enable ( $\overline{OEA}$ ,  $\overline{OEB}$ ) inputs can be used to disable the device so that the buses are effectively isolated.

A 9-bit parity generator/checker generates a parity-odd (PARITY) output and monitors the parity of the I/O ports with an open-collector parity-error ( $\overline{ERR}$ ) flag.  $\overline{ERR}$  can be either passed, sampled, stored, or cleared from the latch using the latch-enable ( $\overline{LE}$ ) and clear ( $\overline{CLR}$ ) control inputs. When both  $\overline{OEA}$  and  $\overline{OEB}$  are low, data is transferred from the A bus to the B bus and inverted parity is generated. Inverted parity is a forced error condition which gives the designer more system diagnostic capability. The SN74BCT29854 provides inverting logic.

The SN74BCT29854 is characterized for operation from 0°C to 70°C.

NA = not applicable, NC = no change, X = don't care

† Summation of low-level inputs includes PARITY along with Bi inputs.

‡ Output states shown assume the  $\overline{ERR}$  output was previously high.

§ In this mode, the  $\overline{ERR}$  output, when enabled, shows noninverted parity of the A bus.

**absolute maximum ratings over operating free-air temperature range (unless otherwise noted) $^\ddagger$**

Supply voltage, $V_{\text{CC}}$	7 V
Input voltage, $V_{\text{I}}$	7 V
Voltage applied to a disabled I/O port	5.5 V
Operating free-air temperature range	0°C to 70°C
Storage temperature range	–65°C to 150°C

$^\ddagger$  Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied.
