

## SN74LVC1G3157 Single-Pole Double-Throw Analog Switch

### 1 Features

- ESD protection exceeds JESD 22
  - 2000V Human Body Model (A114-A)
  - 1000V Charged-Device Model (C101)
- 1.65V to 5.5V  $V_{CC}$  operation
- Qualified for 125°C operation
- Specified break-before-make switching
- Rail-to-rail signal handling
- Operating frequency typically 340MHz at room temperature
- High speed, typically 0.5ns ( $V_{CC} = 3V$ ,  $C_L = 50pF$ )
- Low ON-state resistance, typically  $\approx 6\Omega$  ( $V_{CC} = 4.5V$ )
- Latch-up performance exceeds 100mA Per JESD 78, class II

### 2 Applications

- [Wearables and mobile devices](#)
- [Portable computing](#)
- Internet of things (IoT)
- Audio signal routing
- [Remote radio unit](#)
- [Portable medical equipment](#)
- [Surveillance](#)
- Home automation
- I2C/SPI/UART bus multiplexing
- Wireless charging

### 3 Description

This single channel single-pole double-throw (SPDT) analog switch is designed for 1.65V to 5.5V  $V_{CC}$  operation.

The SN74LVC1G3157 device handles both analog and digital signals. The SN74LVC1G3157 device allows signals with amplitudes of up to  $V_{CC}$  (peak) to be transmitted in either direction.

Applications include signal gating, chopping, modulation or demodulation (modem), and signal multiplexing for analog-to-digital and digital-to-analog conversion systems.

#### Package Information

PART NUMBER	PACKAGE <sup>(1)</sup>	BODY SIZE (NOM)
SN74LVC1G3157	SOT-23 (DBV) (6)	2.90mm × 1.60mm
	SC70 (DCK) (6)	2.00mm × 1.25mm
	SOT (DRL) (6)	1.60mm × 1.20mm
	SON (DRY) (6)	1.45mm × 1.00mm
	DSBGA (YZP) (6)	1.41mm × 0.91mm
	SON (DSF) (6)	1.00mm × 1.00mm
	X2SON (DTB) (6)	0.80mm × 1.00mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

## 5 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
$V_{CC}$	Supply voltage <sup>(2)</sup>	-0.5	6	V
$V_{IN}$	Control input voltage <sup>(2) (3)</sup>	-0.5	6	V
$V_{I/O}$	Switch I/O voltage <sup>(2) (3) (4) (5)</sup>	-0.5	$V_{CC} + 0.5V$	V
$I_{IK}$	Control input clamp current $V_{IN} < 0$	-50		mA
$I_{I/O}$	I/O port diode current $V_{I/O} < 0$ or $V_{I/O} > V_{CC}$	-50	50	mA
$I_{I/O}$	On-state switch current <sup>(6)</sup> $V_{I/O} = 0$ to $V_{CC}$	-128	128	mA
	Continuous current through $V_{CC}$ or GND	-100	100	mA
$T_J$	Junction temperature		150	C
$T_{stg}$	Storage temperature	-65	150	C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground unless otherwise specified.
- (3) The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
- (4) This value is limited to 5.5V maximum.
- (5)  $V_I$ ,  $V_O$ ,  $V_A$ , and  $V_{Bn}$  are used to denote specific conditions for  $V_{I/O}$ .
- (6)  $I_I$ ,  $I_O$ ,  $I_A$ , and  $I_{Bn}$  are used to denote specific conditions for  $I_{I/O}$ .

## 6 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±1000	

- (1) JEDEC document JEP155 states that 500V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250V CDM allows safe manufacturing with a standard ESD control process.

## 7 Thermal Information

- (1) T<sub>A</sub> = 25°C
- (2) Measured by the voltage drop between I/O pins at the indicated current through the switch. ON-state resistance is determined by the lower of the voltages on the two (A or B) ports.
- (3) Specified by design
- (4) Δr<sub>on</sub> = r<sub>on(max)</sub> – r<sub>on(min)</sub> measured at identical V<sub>CC</sub>, temperature, and voltage levels
- (5) This parameter is characterized, but not production tested.
- (6) Flatness is defined as the difference between the maximum and minimum values of on-state resistance over the specified range of conditions.
- (7) I<sub>off</sub> is the same as I<sub>S(off)</sub> (off-state switch leakage current).

## 10 Switching Characteristics 85°C

T<sub>A</sub> = -40 to +85°C (1) (2) (3)

Parameter		FROM (INPUT)	TO (OUTPUT)	V <sub>CC</sub>	MIN	NOM	MAX	UNIT
t <sub>pd</sub>	R <sub>L</sub> = 250Ω, C <sub>L</sub> = 50pF, V <sub>load</sub> = V <sub>CC</sub>	A or Bn	Bn or A	1.8V ± 0.15V			2	ns
				2.5V ± 0.2V			1.2	
				3.3V ± 0.3V			0.8

## 14 Detailed Description

### 14.1 Overview

The SN74LVC1G3157 device is a single-pole double-throw (SPDT) analog switch designed for 1.65V to 5.5V  $V_{CC}$  operation. The SN74LVC1G3157 device can handle analog and digital signals. The device permits signals with amplitudes of up to  $V_{CC}$  (peak) to be transmitted in either direction.

### 14.2 Functional Block Diagram

Figure 14-1. Logic Diagram (Positive Logic)

### 14.3 Feature Description

The 1.65V to 5.5V supply operation allows the device to function in many different systems comprised of different logic levels, allowing rail-to-rail signal switching. Either the B1 channel or the B2 channel is activated depending upon the control input. If the control input is low, B1 channel is selected. If the control input is high, B2 channel is selected.

### 14.4 Device Functional Modes

Table 14-1 lists the ON channel when one of the control inputs is selected.

Table 14-1. Function Table

CONTROL INPUTS	ON CHANNEL
L	B1
H	B2

## 15 Application and Implementation

### Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 15.1 Application Information

The SN74LVC1G3157 SPDT analog switch is flexible enough for use in a variety of circuits such as analog audio routing, power-up monitor, memory sharing, and so on. For details on the applications, see [SN74LVC1G3157](#) and [SN74LVC2G53 SPDT Analog Switches](#).

### 15.2 Typical Application

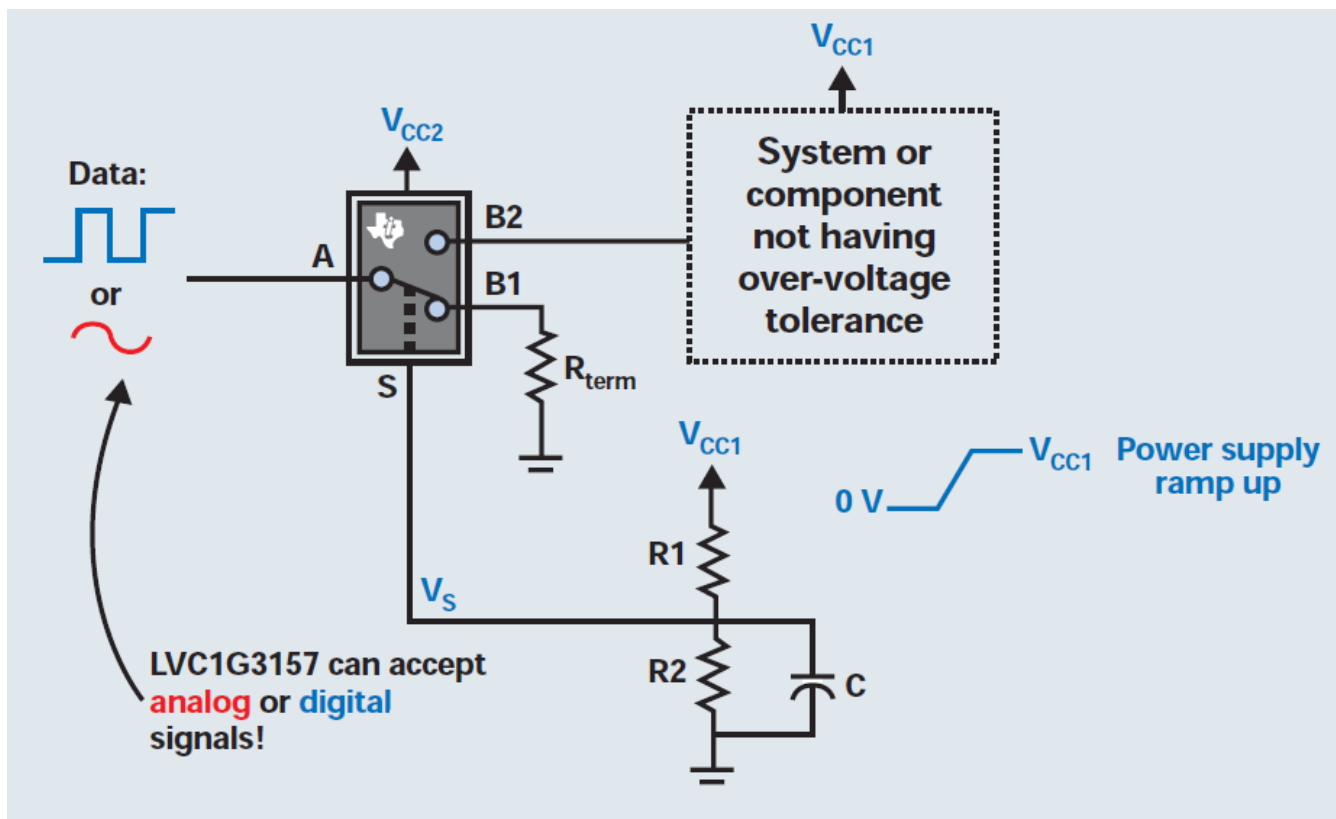

Figure 15-1. Typical Application Schematic

#### 15.2.1 Design Requirements

The inputs can be analog or digital, but TI recommends waiting until  $V_{CC}$  has ramped to a level in [Section 8](#) before applying any signals. Appropriate termination resistors should be used depending on the type of signal and specification. The Select pin should not be left floating; either pull up or pull down with a resistor that can be overdriven by a GPIO.

### 15.2.2 Detailed Design Procedure

Using this circuit idea, a system designer can ensure a component or subsystem power has ramped up before allowing signals to be applied to its input. This is useful for integrated circuits that do not have overvoltage tolerant inputs. The basic idea uses a resistor divider on the VCC1 power rail, which is ramping up. The RC time constant of the resistor divider further delays the voltage ramp on the select pin of the SPDT bus switch. By carefully selecting values for R1, R2, and C, it is possible to ensure that VCC1 will reach its nominal value before the path from A to B2 is established, thus preventing a signal being present on an I/O before the device/system is powered up. To ensure the minimum desired delay is achieved, the designer should use Equation 1 to calculate the time required from a transition from ground (0V) to half the supply voltage (VCC1/2).

$$\text{Set} \left( \frac{R2}{R1 + R2} \times V_{CC1} > V_{IH} \right) \text{ of the select pin} \tag{1}$$

Choose Rs and C to achieve the desired delay. When Vs goes high, the signal will be passed.

### 15.2.3 Application Curve

Figure 15-2. \$V\_S\$ Voltage Ramp

## 16 Power Supply Recommendations

Most systems have a common 3.3V or 5V rail that can supply the  $V_{CC}$  pin of this device. If this is not available, a Switch-Mode-Power-Supply (SMPS) or a Linear Dropout Regulator (LDO) can be used to provide supply to this device from another voltage rail.

## 17 Layout

### 17.1 Layout Guidelines

TI recommends keeping signal lines as short as possible. TI also recommends incorporating microstrip or stripline techniques when signal lines are greater than 1 inch in length. These traces must be designed with a characteristic impedance of either  $50\Omega$  or  $75\Omega$ , as required by the application. Do not place this device too close to high-voltage switching components, as they may interfere with the device.

### 17.2 Layout Example

Figure 17-1. Recommended Layout Example

## 18 Device and Documentation Support

### 18.1 Documentation Support

#### 18.1.1 Related Documentation

For related documentation, see the following:

- Texas Instruments, [Implications of Slow or Floating CMOS Inputs](#)
- Texas Instruments, [SN74LVC1G3157 and SN74LVC2G53 SPDT Analog Switches](#)

### 18.2 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on [ti.com](http://ti.com). Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 18.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

### 18.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.  
All trademarks are the property of their respective owners.

### 18.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

### 18.6 Glossary

[TI Glossary](#) This glossary lists and explains terms, acronyms, and definitions.

## 19 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

<b>Changes from Revision M (August 2022) to Revision N (May 2025)</b>	<b>Page</b>
• Updated $V_{CC}$ and $V_{I/O}$ voltage.....	5
• Updated thermal parameters for DBV and DCK.....	6
• Updated $r_{range}$ .....	7
• Updated enable timing for 85°C 1.8V and 125°C 5V conditions.....	9
• Updated disable timing for 85°C 5V and 125°C 3.3V, 5V conditions.....	9
• Updated THD test conditions and 1.65V specification.....	11

<b>Changes from Revision L (May 2017) to Revision M (August 2022)</b>	<b>Page</b>
• Updated the numbering format for tables, figures, and cross-references throughout the document.....	1
• Updated the <i>Pin Configuration and Functions</i> section.....	3
• Updated the equation in the <i>Detailed Design Procedure</i> section.....	19

<b>Changes from Revision K (January 2017) to Revision L (May 2017)</b>	<b>Page</b>
• Deleted <i>Feature</i> "Useful for Both Analog and Digital Applications" .....	1
• Deleted <i>Feature</i> "High Degree of Linearity" .....	1
• Changed the first sentence of the <i>Description</i> From: "This single-pole double-throw (SPDT)..." To: "This single channel single pole double-throw (SPDT)..." .....	1
• Added the X2SON (DTB) package to the <i>Device Information</i> .....	1
• Added the X2SON (DTB) Package, to the <i>Pin Configuration and Functions</i> .....	3
• Changed <a href="#">Figure 13-2</a> , From: SW1 = V <sub>IL</sub> to SW1 = V <sub>IH</sub> , From: SW2 = V <sub>IH</sub> to: SW2 = V <sub>IL</sub> .....	12
• Changed <a href="#">Figure 13-5</a> .....	12
• Added a series 50-Ω resistor on B1 in <a href="#">Figure 13-6</a> .....	12
• Changed <a href="#">Figure 13-7</a> .....	12

<b>Changes from Revision J (June 2016) to Revision K (January 2017)</b>	<b>Page</b>
• Added new applications to <i>Applications</i> section .....	1

<b>Changes from Revision I (June 2015) to Revision J (June 2016)</b>	<b>Page</b>
• Deleted 200V Machine Model (A115-A) from <i>Features</i> .....	1
• Changed <i>Feature</i> From: "Operating Frequency Typically 300MHz at Room Temperature" To: "Operating Frequency Typically 340MHz at Room Temperature".....	1
• Updated <i>Device Information</i> table.....	1
• Updated pinout images for all Packages.....	3
• Added <i>Receiving Notification of Documentation Updates</i> section.....	21

<b>Changes from Revision H (May 2012) to Revision I (June 2015)</b>	<b>Page</b>
• Added <i>Device Information</i> table, <i>Pin Configuration and Functions</i> section, <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section .....	1
• Updated <i>Features</i> .....	1

<b>Changes from Revision G (September 2011) to Revision H (May 2012)</b>	<b>Page</b>
• Changed YZP with correct pin labels. ....	3

## 20 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) **Status:** For more details on status, see our [product life cycle](#).

(2) **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

(3) **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

(4) **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

(5) **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

(6) **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## X2SON - 0.4 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

4220597/B 06/2022

### NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration MO-287, variation X2AAF.

X2SON - 0.4 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

SOLDER PASTE EXAMPLE  
BASED ON 0.09 mm THICK STENCIL

PRINTED SOLDER COVERAGE BY AREA UNDER PACKAGE  
SCALE:40X

4220597/B 06/2022

4. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pads must be soldered to the printed circuit board for optimal thermal and mechanical performance.
4. The size and shape of this feature may vary.
5. Features may not exist. Recommend use of pin 1 marking on top of package for orientation purposes.

# PACKAGE OUTLINE

## SOT - 0.6 mm max height

PLASTIC SMALL OUTLINE

4223266/F 11/2024

### NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. Reference JEDEC registration MO-293 Variation UAAD

# PACKAGE OUTLINE

## SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

4214840/G 08/2024

### NOTES:

- All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
- This drawing is subject to change without notice.
- Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.25 per side.
- Leads 1,2,3 may be wider than leads 4,5,6 for package orientation.
- Reference JEDEC MO-178.
